TO CONTRACTORS.—In consequence of the Death of the late Contractor, Sealed TENDERS will be received by the Secretary of the Bridge Commissioners of the Town of Drogheda, in the date hereof up to and upon THURSDAY, the 15th day of OCTOBER next.

For taking down the present Bridge over the River Boyne, at Drogheda, and Building in place thereof a Stone Bridge of Eighty Feet Span.

According to Plans and Specification prepared by J. NEVILLE, Esq. C.E. to be seen at my Office, Fair-street, Drogheda; or at the Office of the Engineer, Jocelyn-street, Dundalk, between the hours of TEN and FOUR o'clock every day (Sundays excepted) after this date. The Lowest or any Tender not necessarily to be accepted.

Dated at Drogheda, this 25th day of August, 1863.

HENRY CLINTON,

Secretary to the Bridge Committees of the Corporation Harbour Commissioners and Grand Jury of Drogheda.

TO CONTRACTORS. — HAILEYBURY COLLEGE.—TENDERS are required for certain DRAINAGE and EARTH WORKS, on land at Haileybury College, Herts. Parties willing to Tender may see the plans, sections, and specification, and obtain copy of quantities, at the Office of JOSIAH FOSTER FAIRBANK, C.E. 20, Parliament-street, Westminster, S.W. on and after the 1st OCTOBER, until 8th OCTOBER, from ELEVEN to FOUR each day.—Tenders, endorsed "Tender for Earth Works," addressed to the Rev. Maxwell Hayward, Haileybury College, Herts, to be sent in at NOON, on the 9th OCTOBER. The lowest or any Tender will not necessarily be accepted.

21, Parliament-street, Westminster, September 21, 1863.

HINCKLEY POOR-LAW UNION.—To LAND SURVEYORS and VALUERS.—The Guardians of the Hinckley Union are prepared to receive TENDERS for a SURVEY, PLAN, and VALUATION of the Parish of HINCKLEY, within the said Union, the area of which is about 3,585 acres; the plan to be made upon a scale of two chains to an inch, and the valuation according to the form prescribed by the Poor Law Board. The contract to be entered into will contain a clause limiting the time of completion to six calendar months. The Guardians do not bind themselves to accept the lowest or any Tender. A form of the contract to be entered into may be seen, and further information and application to me at my Office at Hinckley. Tenders, sealed and endorsed, "Tender for Survey, Plan, and Valuation of the Parish of Hinckley," must be sent to me before or on WEDNESDAY, the 14th day of OCTOBER next.—By order of the Board,

Hinckley, September 24th, 1863. SAMUEL PRESTON, Clerk.

TO CONTRACTORS and OTHERS.—TENDERS wanted for the REMOVAL of about 1000 cubic yards of RUBBISH, from Hartshorn-court, Golden-lane, St. Luke's. The Tenders to be delivered by the 5th inst., and the Contract to be entered into and carried out by the parties, and to begin the work of removal forthwith upon receiving directions to do so. Tenders to be sent to A. C. VIRWEG, Esq., 81, Wood-street, Cheapside, on or before TUESDAY, 6th OCTOBER instant.—Mr. VIRWEG does not bind himself to accept the lowest or any Tender.

GREENWICH UNION.—TENDER for COOKING APPARATUS.—The Guardians of the Greenwich Union are desirous of receiving Sealed TENDERS from persons willing to CONTRACT for SUPPLYING and FITTING UP a COOKING APPARATUS (with boilers, furnaces, and all other requisites) for the service of the new kitchen now in course of erection at the Union House, Woolwich-road, Greenwich.—Information as to the required capabilities, and other details, may be obtained on application to Mr. R. P. BROWNE, Architect, 54, Clement's-inn, Lond n, or Royal Hill, Greenwich.—Each Tender must be accompanied by a drawing or drawings of the apparatus and its appurtenances, and a detailed specification of the works to be performed, and the materials to be used in constructing and fitting up the same. All Tenders must contain the names of two sureties willing to enter into a bond for the due performance of the same, in a sum equal to one-third of the amount of the Tender; and such Tenders must be sealed up, addressed to the Guardians of the Greenwich Union, endorsed, "Tender for Cooking Apparatus," and delivered at the Clerk's Office, Union House, before TWELVE o'clock on THURSDAY, the 15th OCTOBER instant, on which day the same will be opened at a meeting of the Guardians; and the persons tendering, or their authorised agents, must be in attendance on that day at FIVE p.m. precisely.

SAMUEL SAW, Clerk to the Guardians.

Greenwich, S.E. October 1, 1863.

TO BUILDERS.—TENDERS required for the erection of TWO HOUSES with SHOPS, at Upper Norwood, close to the Crystal Palace. The Builder whose tender is accepted (not necessarily the lowest) will be required to take a plot of ground for erection of Two Houses adjoining, at a low ground rent, with liberal advance.—Plans, &c., at the Office of Mr. T. K. GREEN, 23, College-hill, Cannon-street, E.C.

TO BUILDERS.—Persons willing to TENDER for the whole or any part of the WORKS required for the ERECTION of a NEW RESIDENCE at Tapton Park, near Sheffield, are to find plans and specifications on and after MONDAY, SEPTEMBER 28, on application to the Architect, Mr. E. M. HADFIELD, Cornish-house Chambers, Sheffield, from whom all further particulars may be obtained. Tenders to be delivered not later than MONDAY, the 19th OCTOBER, 1863. No pledge is given to accept the lowest or any Tender.

STEPNEY UNION.—To PAINTERS, &c. The Guardians of the Poor of the Stepney Union will, at their meeting to be held at the Ratcliff Workhouse, York street, West Ratcliff, on THURSDAY, the 8th day of OCTOBER, 1863, receive TENDERS for PAINTING the CHILDREN'S INFIRMARY at Limehouse, and Repairing the Roof thereof. A specification of the work to be done, and all further particulars, may be obtained upon application at the Clerk's Office, Ratcliff Workhouse.—By order of the Guardians,

W. H. SWEPSTONE Clerk.

September 25, 1863.

[For remainder of Contracts see next Page.

CONTRACTS.

TO BUILDERS.—TENDERS are required for the REBUILDING of a CHURCH in Carlton-street, Brighton, Sussex. The drawings, specifications, and terms of Contract, may be seen at the Offices of Messrs. JEN and FOUR, in the Vestry of the parish Church, the Church of JEN and FOUR, in the Vestry of the parish Church, the Church of JEN and FOUR, in the Vestry of the parish Church, the Church of

ST. PANCRAS IRON WORK COMPANY,

OLD SAINT PANCRAS ROAD, LONDON, N.W.

APPROVAL OF THE ROYAL VETERINARY COLLEGE.

THE MEDALS OF ENGLAND AND FRANCE,

And the Medals and High Recommendation of the Royal Agricultural Societies of England and Ireland.

SECURED BY EIGHT SEPARATE PATENTS. LATEST, 1863.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick, or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

PATENT ENAMELLED TOP PLATE MANGER, with RACK & WATER-TROUGH,

The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

THE HALTER BALL, ATTACHED BY A NEW IMPROVEMENT, WORKS NOISELESSLY, AND ALMOST WITHOUT FRICTION.

PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible; advantages peculiarly their own.

THE PATENT HARNESS FITTINGS

Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

EVERY DESCRIPTION OF STABLE FURNITURE.

ILLUSTRATED LISTS ON APPLICATION.——INSPECTION OF SHOW-ROOM REQUESTED.

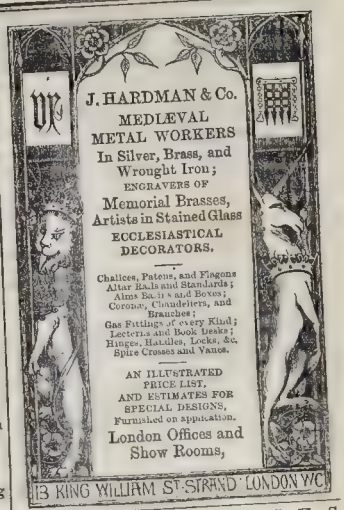
J. B. SCAMMELL & Co. (late Thomas Pugh & Co.)

WHOLESALE IRONMONGERS,

13, KING STREET, SNOW HILL, LONDON.

NUT

PLATE.



We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in public and private buildings, in Her Majesty's Pavilion and Camp at Aldershott—alone, many hundred sets without one single failure. It is applicable to all Locks and Latches, both rim and mortise, and effects a most secure fastening, without any screw in the neck of the knob. Perfect action guaranteed in both Locks and Furniture, if the Locks are of our own manufacture.

Now rich designs in glass, china, brass, bronzed, gilt, carved woods, oxhide &c. &c. or to any design.

THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.

A most complete and extensive stock of every description of locks, latches, brass foundry, and ironmongery, required for buildings, of the best quality manufactured, at the lowest wholesale prices.

*** Illustrations and particulars sent upon application.

CHUBB'S LOCKS,

with all the recent Improvements,

STRONG FIRE-PROOF SAFES, CASH AND DEED BOXES.

Complete Lists of Sizes and Prices may be had on Application

ROOFING METAL

(WEITERSTEDT'S PATENT or MARINE),

In sheets 2lb. and 3lb. per square foot, 9 feet long by 3 feet wide.

The most durable and economical metal for roofing.

Does not rust or decay under the action of the fumes here or acids.

For prices, particulars, &c. apply to the Manufacturers,

W. W. & R. JOHNSON & SONS,

WHITELEAD WORKS LIMEHOUSE, LONDON, E.

FIRE-PROOF CONSTRUCTION.—

FOX & BARRETT'S PATENT.

This improved system of fire proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the Patent,

MR. BARRETT,

ESTABLISHED 1744

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES.

To BUILDERS, CARPENTERS, and BLIND MAKERS.

AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,

of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.

They can be obtained of Ironmongers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

IRON ROOFING of CORRUGATED IRON,

Wrought Iron, principal Roofs covered with Slates, Iron Bridges, Girders, and Railings; also Portable Buildings for Dwellings, Farm Purposes, Churches, Chapels, Schools, Theatres, Concert or Dancing Rooms, &c. suitable to all Climates, fixed complete in town or country, or packed for exportation.

For Designs and Estimates apply to

BARTLETT, BROTHERS, & CO.

DEVONSHIRE WHARF, CAMDEN TOWN, N.W.

PATENT INDURATING SOLUTIONS,

For the Preservation of Stone, Cement, &c.;

PATENT SILICEOUS PAINT, FOR COATING BRICKS, CEMENT, &c.

FIRE-PROOF VARNISH,

For Internal Wood Work, Roofs, and Church Work generally. This Varnish renders Wood Uninflammable, and Preserves it from Decay.

THE FLUO-SILICIC STONE-PRESERVING COMPANY, LIMITED.

39, CHARING CROSS, S.W. & 12, COPTHALL COURT, THROGMORTON STREET, E.C.

PATENT FLUO-SILICIC INDURATIONS for the PRESERVATION of STONE, CEMENT, and other like materials. The Company apply to the surface of Stone, Cement, &c. a solution of Fluo-Silicic Acid, and Silicate of Potash. These are the only patents which embrace the use of that most valuable agent, Fluo-Silicic Acid. Bath, Caen, and other soft stones, when treated by the Company's solution, become extremely hard. The great expense of high ornament to buildings in hard stone has been an obstruction to Art; but since the Fluo Silicic process can be applied as readily to a flat stone after it is carved, that obstruction exists no longer. The Fluo-Silicic at once permanently arrests the decay of all stone.—For further information apply to the Manager of the Company, Mr DUDLEY, Architect, as above.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Baryta from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the purest Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,

WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

PURE STATUARY MARBLE! and in slabs of large dimensions, can be obtained at M. W. JOHNSON'S MARBLE WORKS, 363, EUSTON-ROAD, London, N.W.

LITTLE CASTERTON FREESTONE.
Apply for prices, &c. to
OCTAVIUS N. SIMPSON, STAMFORD;
and see Specimens at the Office of
Messrs. PINDER SIMPSON & SONS, 29, Saville-row, London, and at the Museum of Practical Geology, Jermyn-street, W.
This stone (which is a perfect oolite), is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.

SLATES.—JONES & CO. have a STOCK of SLATES of different sorts, from the best quarries in Wales.
SLATE and CISTERN delivered at any station in quantities of not less than five tons, from their depôts, Bangor, Carnton, Saltney, Chester, and Gloucester.

Agent for Hamilton's celebrated Painting and Graining Brushes.

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

JAMES W. TYLER, CONTRACTOR FOR

DEVAUX'S VIEILLE MONTAGNE THICK ZINC ROOFING,

ON IMPROVED PRINCIPLES.

12, ABINGDON STREET, and 4, WOOD STREET, WESTMINSTER, close to Victoria Tower.

Estimates furnished for every description of Zinc Roofing and Guttering, inclusive or exclusive of Timber or Iron Framing, in all parts of England.

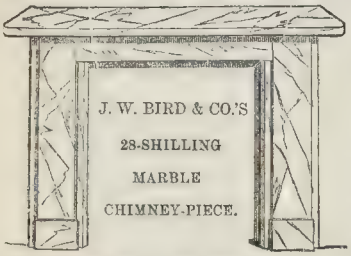
Having for several years been actively employed in laying DEVAUX'S THICK ROOFING ZINC (the purest extant) upon the new principles introduced by Mr. Edmeston, Mr. TYLER can refer with confidence to work done on the best recommendation.

Good Zinc badly laid will still be a failure, for there is much more importance in the mode of laying than is yet generally known; and parties who will intrust their work to Mr. TYLER will find that this superior metal is thus rendered, instead of, and at no extra cost.

This Zinc thus laid is quite as lasting as lead, if the woodwork is arranged according to Mr. TYLER'S directions.

BATH STONE OF BEST QUALITY.

RANDELL & SAUNDERS, Quarrymen and Stone Merchants, Bath.



List of Prices at the Quarries and Depôts, also Cost for Transit to any part of the United Kingdom, furnished on application to BATH STONE OFFICE, CORSHAM, WILTS.

MARBLE & STONE CHIMNEY-PIECES FOR THE MILLION.

PRICE LIST ON APPLICATION.

A Stock of 500 always to choose from at

J. W. BIRD & CO.'S,
THE EMPORIUM,
145 & 143½, EUSTON ROAD,
N.W.

A Marble Box Chimney, with 8-inch piers, as Illustrated, for 28s. and fitted to any opening up to 3 feet square.

STONE DITTO, WITH BEAUTIFUL MOULDED CAPS, FOR SEVEN SHILLINGS.

Monuments and Tablets in great variety, equally low in price.
Masons' Work of all kinds executed for and executed with despatch, in Town or Country.
A VACANCY FOR AN OUT-DOOR APPRENTICE.

TO BUILDERS.

STONE! MARBLE! STONE!

THE CHEAPEST HOUSE IN LONDON FOR MARBLE AND STONE CHIMNEY PIECES.

MESSRS. BRINE & CO.

135, EUSTON ROAD, ST. PANCRAS.

Box Stone Chimney Pieces.....from 6s. to 9s.
Marble ditto ..... 28s. to 32s.
Truss Marble Chimney Pieces .....from 50s. to 70s.
Truss Stone ditto ..... 12s. to 18s.
Sheet of Designs sent free on application. Estimates for every description of Masonry.

On the 30th October, price One Shilling, the First Part of

THE GALLERY OF GEOGRAPHY.

By the Rev. THOMAS MILNER, M.A., Author of the "Gallery of Nature," &c. &c.

The Work comprises a History of Geographical Discovery in Ancient and Modern Times; describes the boundaries of Countries and Provinces; sketches the Scenery, Cities, and Populations of the different Countries of the Globe, and their Social, Political, and Physical Condition. The whole profusely embellished with Steel Engravings, Maps, and Woodcuts, chiefly from original authorities.

W. & R. CHAMBERS, 47, Paternoster-row, London; and 339, High-street, Edinburgh.

COMPLETION OF MR. W. FAIRBAIRN'S WORK ON MILLS.

In 8vo with 10 Plates and 161 Woodcuts, price 18s. cloth,

TREATISE on MILLS and MILLWORK,

Vol. II. on Machinery of Transmission and the Construction and Arrangement of Mills, viz. Wheels, Shafts, and Couplings; Engaging and Disengaging Gear; Mill Architecture; also Corn, Cotton, Flax, Silk, and Woollen Mills: with a Description of Oil Paper, and Powder Mills, including a short Account of the Manufacture of Iron, and an Index to the whole work.

By W. FAIRBAIRN, C.E. LL.D. F.R.S.

*** Vol. I. on the Principles of Mechanism and on Prime Movers, with 3 Plates and 17 Woodcuts, price 10s. and the work complete in 2 vols. price 32s. cloth.

London: LONGMAN, GREEN, & CO. Paternoster-row.

IMPROVEMENT of CALCUTTA. — Mr. W. CLARK, Engineer to the Justices of Calcutta, has arrived in London, and any parties wishing to COMMUNICATE with him can do so by a line addressed to care of Messrs. W. THACKER & CO. East India Agents 87, Newgate street.

Now ready, 18mo. 2s. 6d. cloth, post-free,

A MANUAL on EARTHWORK.

By ALEX. J. S. GRAHAM, C.E.
Resident Engineer, Force-end Dean Central Railway.
With numerous Diagrams.

London: LOCKWOOD & CO. 7, Stationers' Hall Court.

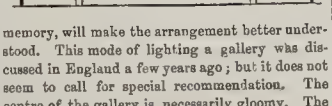
FIFTEEN VOLS. of "THE BUILDER," bound in cloth, for 3l. 10s.
Address, W. G. JOHNSON, Windsor.

THE SCULPTURE AT THE INTERNATIONAL EXHIBITION, 1862.

IN THE ART JOURNAL for OCTOBER (price 2s. 6d.) are comprised Engravings from the SCULPTURE OF THE EXHIBITION, among which are,—J. S. Westmacott's "Leti," J. Gibson's "Venus," W. Theed's "Druid," J. Mozier's "Wept of Wishton-Wish," J. A. Jerichau's "Bathers Surprised," F. Thrupp's "Nymph and Cupid," W. C. Marshall's "Cupid Captive," J. P. Malin's "Grapplers," J. Durham's "The Queen," Baron de Triqueti's "Edward VI." W. Brodie's "Atone," G. Strazza's "Bride," W. C. Marshall's "Ophelia," E. Davis's "Rebecca," G. M. Bennett's "Zephyr and Flora," J. Mozier's "Jephthah's Daughter," Miss Hosmer's "Puck," C. Corti's "Satan," C. A. Fraikin's "Venus," Marshall Wood's "Daphne," J. Durham's "Hermione," Mozier's "Indian Girl," A. Munro's "Sound of the Shell," L. Guglielmi's "Fortune-Teller," R. Monti's "Sleep of Sorrow and Dream of Joy," P. Magni's "Reeling-Girl," G. Halse's "Defending the Pass," P. Magni's "First Footsteps," E. Mullet's "Nymph and Cupid," J. Albertoni's "Nymph of Diana," V. Vela's "Prayer," Tantardini's "La Bagnanti," &c. &c. with descriptions by J. B. Atkinson. The Line Engravings are, Hanley's "Pet of the Common," Turner's "Hannibal Crossing the Alps," and T. Allom's "Pergamos."

London: JAMES S. VIRTUE, 26, Ivy-lane.

The Builder.



VOL. XXI.—No. 1078.

"*Going Along.*"
Munich to Linz.

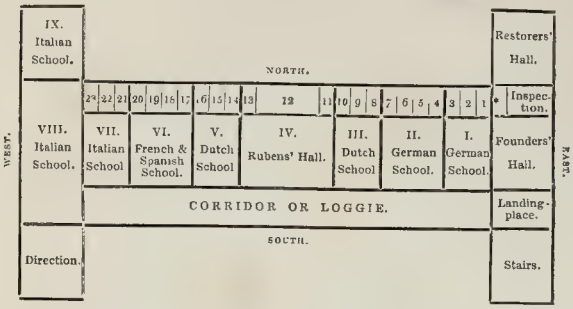
HE first words seen on entering the Glyptothek, *anglicè* Sculpture Repository, tell you that the erection and adornment of the building were presided over by the Chevalier Léon Klenze (*Regis jussu ædificio exstruendo et decorando præfuit Leo Klenze eques*); and the next that Peter Cornelius painted the pictures with which the ceilings of the apartments are embellished. It is thus throughout the city: the artist is in all cases loudly acknowledged, and has the credit of his work. In the interior of the Glyptothek the architect took a course the correctness of which was less generally acknowledged than it is now. Instead of the cold, dull colours, and the poverty of decoration which had been thought most suitable in sculpture galleries, he introduced a considerable amount of ornament in the ceilings, coloured and gilt, and made the walls take the aspect of marbles of various kinds,—in some cases with good effect so far as the ancient sculpture is concerned, and in others with bad. The floors are paved with marbles in patterns. The apartments have their several names from their purpose or the chief object in each of them, and to this the ornamentation is made to have reference. To the *Salle Egyptienne* succeeds the *Salle des Incunables*, where are placed what may be called the tentative doings of the Greeks more or less influenced by the works of earlier nations, and the imitative works of the Romans trying to be Greek; art in its cradle (*incunabula*), so to speak. And then the *Salle des Eginètes*, the *Salle d'Apollon*, the *Salle Bachique*, *Salle des Niobides*, *Salle des Sculptures à Couleur*, and so on; ending with the *Salle des Modernes*, containing eighteen works. The Eginetan room displays, with care and learning, the remarkable statues which were discovered, as we mentioned last week, by Cockerell, the Baron Haller, and others, in the ruins of a temple on the island of Egina. When the purchase of these for the British Museum had been declined in England a messenger was despatched abroad empowered to give 8,000*l.* for them; and yet by some ever-to-be-regretted bungle the ex-king of Bavaria, then Prince Royal, was permitted to buy them for 6,000*l.* The subject of the groups has been differently explained, but the received opinion is that they illustrate the doings of the Æacidæ, the group from one pediment representing the combat of Hercules and Telamon with the Trojan king Laomedon; and the group from the other, the fight of Greeks and Trojans over the body of Patroclus. Certain it is, that they are of the highest value, as well for being steps in the history of art as for the beauty and delicacy of execution shown in them. In date they are a little earlier than the time of Phidias, and retain some of the conventionalities of the more primitive art which Phidias brought to perfection. The statues would seem to have been coloured at one time, and some of the ornaments must have been of metal, attached, as in the case of the Mausolus marbles now in the British Museum, or, rather, outside it. These statues from Egina were skilfully restored by Thorwalsden. Too many of the other statues in the Glyptothek are patched, often vulgarly. There are some rare and beautiful things, nevertheless; and if we were to let our pen run, we should carry the account to greater length than would balance with other notes made "going along." Suffice it but to name three or four; for example, the "Barberini Faun," as the colossal sleeping figure found in the ditch of the Castle of St. Angelo is called, one of the most marvellous pieces of representative sculpture in the world. "Silenus with the Infant Bacchus" is a charming group: no wonder it was famous even in the best time of Greek art. Living man never nursed a baby so grandly. Ino, also holding in her arms the infant Bacchus, is another wonderful example of what the Greeks could do with a block of marble. The head is exquisite. It must surely be a divine instinct that makes us worship beauty. The "Apollo," sometime called the "Barberini Muse," in drapery of the highest style, of a time a little before that of Phidias, is noticeable also in this, that the eyelashes are formed of little thin plates of bronze: the eyeballs were probably of precious stones. We may not, however, lounge here longer. And as to the exterior of the building, it is too late now to say anything, save to remind that it presents an Ionic octastyle portico, with a group in the pediment, and that in the extension on either side of the portico are niches containing statues of Phidias, Pericles, and Hadrian; Vulcan, Prometheus, and Dædalus. 1816 saw its commencement, and 1830 its completion. The people of Munich are proud of the Glyptothek; and when it was a new thing with them the lower orders there, who connect everything with what they love best, namely beer, used to show their admiration of the building by calculating how many measures of the drink it must have cost. Spite of this, however, Von Klenze is an overpraised man.

The building known as the New Pinacothek, designed by the architect Voit, by direction of the ex-king, to receive works of the nineteenth century, is opposite the Glyptothek. The first stone was laid by the king in October, 1846, and the museum was opened to the public in October, 1853. There are here on the upper floor 327 pictures in ten large apartments, and fourteen cabinets; besides twenty-three paintings by Rottmann of famous places in Greece, in a large apartment built purposely to receive them, and where the light is admitted by upright sashes out of sight of the spectator. In other words, a solid ceiling covers the apartment to within a few feet of the walls all round: then at this termination of the solid ceiling (which is carried on columns in the apartment), and above it, rise upright lights all round supporting at a higher level the roof of the narrow slip over which the central solid ceiling does not extend. The outline below, from

memory, will make the arrangement better understood. This mode of lighting a gallery was discussed in England a few years ago; but it does not seem to call for special recommendation. The centre of the gallery is necessarily gloomy. The views, in encaustic, are little more than sketches, but have a value.

Amongst the most important pictures of the general collection are Kaulbach's "Destruction of Jerusalem," the "Discovery of the Body of Wallenstein by the Astrologer Seni," painted by Carl Piloty, whose powerful picture of Nero, shown at our late International Exhibition, will long be remembered in England; and a curious altar-piece by Hess, introducing, at the foot of the throne, on which is seated the Virgin Mary with the Child, the patrons of the four churches which the ex-king built and endowed,—St. Boniface, with the model of the Basilica; St. Lewis, with the church of St. Lewis; St. Stephen Martyr, with the church dedicated to All Saints; and an angel, with the church dedicated to *Notre Dame de Bon Secours*. Future antiquaries will prize it. The fourteen oil sketches by Kaulbach, introducing the king and the various artists who executed important works for him, are interesting and valuable,—though on the onteide of the building where they are seen, enlarged and poorly painted by another hand, the effect is unsatisfactory. They include in various situations portraits of Cornelius, Klenze, Hess, Kaulbach, Rottmann, Schwanthaler, Schadow, Voit, Rauch, Thorwaldsen, and others. One of the pictures shows the Foundry (while the colossal head of "Bavaria" is being raised from the mould); a second, the stained-glass works and those concerned in them; and, a third the porcelain manufactory.

In another part of the collection will be found Wilkie's "Reading of the Will," and pictures by Achenbach, Overbeck, Riedel, Kirchner, Louis Gallait, Verboekhofen, and other true artists.



Before looking into the Pinacothek proper, the gallery of ancient paintings, and a famous collection, let us run to the English Garden,—one of the finest promenades a city ever had,—and clear the vision. To look at paintings when weary is a mistake and waste of time. This English Garden, or rather park, though narrow (say half a mile), is four miles long, and is full of fine trees. Branches of the river Isar water and diversify it, and good roads pierce it in every direction. It is a good thing to have so charming and prized a place known as English. In the hot weather people may be found there as early as four o'clock in the morning, seeking fresh air and exercise. Munich is indebted to Count Rumford, of *grate* reputation, for the first planting and planning of this delightful retreat. Rumford was an American of remarkable ability and mental activity. He was knighted in England in 1781, for taking the Royal side in the war between England and America. He shortly afterwards went to Bavaria, took a distinguished position in the service of the state, and worked for social amelioration. This English Garden is one of the results. He returned to London, helped to found the Royal Institution, and then went to Paris, where he afterwards died.

Freshened in mind and eyesight, we enter the Pinacothek to enjoy such a treat, especially in respect of works of the old German masters, and other early artists, as can be obtained in few places. There are here 1,281 pictures, 592 of them being in the central halls, and 689 in 23 cabinets. Klenze was the architect, and finished it in 1836. The king had laid the first stone on Raffaelle's birthday, April the 7th, in 1826. Before touching any of the pictures, let us say a few words about the corridor, or loggie, reached on ascending the staircase. This is adorned with fresco paintings designed by Cornelius, and has scarcely received the praise it deserves. There are twenty-five compartments, half of which have pictures, chiefly in the vaulting, to illustrate the progress of Italian painting, and the other half the progress of painting in Germany and the Low Countries, arabesques and fanciful decorations, filling all the spaces around them. The pictures vary very much in merit, and the lower part of the walls is sickly in colour; but, as a whole, the gallery is suggestive and delightful,—a gallery of

instruction. The surface peels in parts (it was done in 1840), and appears to be kept constantly in repair.

Following the example in "Murray," our printer has formed with rules and types an outline plan showing the arrangement of the building.

GROUND PLAN OF THE FIRST FLOOR OF THE PINACOTHEK.

The dress in Stieler's portrait of King Lewis I., hanging in the Hall of the Founders, at entering, is very cleverly presented: it is evidently easier to paint satin than mind. Plenty of even that, however, will be found in some of the pictures within. The first apartment is rich in works by Albert Durer (notably his grand full-lengths of St. Peter and St. John, and St. Paul and St. Mark), Holbein, Wohlgemuth, Burgkmair (look at his remarkable "Victory of Scipio Africanus over Hannibal at Zama"), Matsys, Coxcie, and Kulmbach. Of a picture in this room, ascribed to John van Eyck, "The Offerings of the Magi," hard things have been said by the most recent writers on the Flemish painters, Messrs. Crowe and Cavalcaselle. These investigators call it the work of an imitator in the early half of the sixteenth century.* If so, he was a man of no common skill. They further assert that the gallery contains no real picture by John van Eyck, but are willing to place "The Adoration of the Kings," a triptych in the third cabinet, ascribed to him, amongst the first productions of Van der Weyden. Whoever painted it, it is a wonderful work; the two wings show respectively "The Annunciation of the Virgin," and "The Presentation in the Temple." It is much superior to the majority of pictures known to be by Van der Weyden, clever as these are. A repetition, by Quentin Matsys, of his "Usurers" (he seems to have painted the same models frequently) is inferior to that in Windsor Castle. The Rubens Hall is a grand apartment. In this and other parts of the building there are eighty-eight paintings, the majority of them large, and some of surpassing merit, ascribed to this mighty colourist. Admit, what we know to be the case, that he had a body of disciples or pupils who worked with him, and advanced his pictures; still, the amount of work scattered over the world which shows his hand and mind is truly astounding. Only now and then a picture by Rubens touches us: for personal hanging we would prefer a fine Francia, a Perugino, a Gian Bellini, or even a Memling to half a dozen of his gorgeous spreads; still, what a mighty genius the man was! How universal his knowledge; how boundless his invention; how correct his pencil; how marvellous his power over colour! Of the painters we have just now mentioned, the gallery contains some exquisite specimens. The Virgin with the Infant on the ground, amidst roses, is one of the most beautiful pictures Francia or any other man ever produced, though inferior to his "*Pietà*" in our own National Gallery, which we regard as one of the finest pictures in the world. It was in 1517 that he died. Of Perugino, too, Raffaelle's master, there are some good examples: one, The Virgin, accompanied by two angels, appearing to St. Bernard under an open portico, dwells pleasantly on the memory. He died seven years after Francia and four years after Raffaelle. Oehlenschläger, in his art poem, "Correggio," well Englished by Mr. Theodore Martin, touches cleverly some of his weaknesses, as thus:—

"How fairest thou, worthy Perugino, with
Thy soft green tone, thy figures ranged to match
On either side, thy still repeated thoughts,
And thy unfailing St. Sebastian!
Still, thou'rt a glorious fellow! though, perchance,
Some more invention had not been amiss."

Of Memling, miscalled Hemling, whose pictures range, says Wornum, from 1450 to 1499, there is his most noted work, "The Seven Joys of the Virgin Mary, and the Arrival of the Three Kings," presenting hundreds of miniature figures, for the most part exquisitely painted. His "Seven Griefs of Mary," at Turin, seemed to us inferior to it. His picture "St. Christopher with the Infant Jesus on his Shoulders," in the Pinacothek, is also charming. Forty works by Van Dyck, and marvellous specimens by Mieris, Denner, Kranach, Schoorel, Teniers, Rembrandt, and others, ought to be spoken of, but cannot be. We shall meet with works of the same men in other quarters. Of drawings by the old masters there are thousands in the lower story of the building. The galleries, we must mention by the way, are floored with a white cement, which is friable, and spoils the appearance of the boots and shoes of visitors very speedily. A more serious complaint is being made with reference to this gallery; and that is, that the managers are either ignorant of the value of the pictures in their possession, and so sell them at ridiculously low prices, or that, knowingly, they sacrifice the interests of the gallery to serve some private end. We heard some strange stories exemplifying this assertion, but have no means personally of confirming or refuting it. This, however, we can say, that several of the pictures are in a very bad state for want of attention, and that the hanging shows anything but skill or discrimination.

We must pass many buildings in Munich and many things, only staying to say a dozen lines about the Royal Palace, which offers much to interest;—Stieler's hall of pretty women, and, much better, Schnorr's fine pictures in the Hall of Charlemagne and the Hall of Barbarossa, illustrating the lives of those worthies;—expressive, well grouped, and well drawn. The twelve colossal bronze statues, which stand six on each side of the central walk up the throne-room, have been lately regilt at the cost, according to an attendant there, of about 230*l.* each. These statues are nearly 10 feet in height, and were designed by Schwanthaler.

Leaving Munich for Linz, the railway ride is very fine, and within an hour of Salzburg, where the road winds in and out up the gorge, grand in the extreme. The beautiful Chiemsee is coasted; and up to Salzburg and some few miles beyond, the well-wooded slopes rise from the rushing sparkling river at their base, and are topped by the bold giant forms of the Salzburg Alps, their heads enwreathed by fantastic, flowing cloud-robes above and around them. To beautiful Salzburg we shall come again presently, and shall have something to say of its lovely situation, its cathedral, and its salt-mines. At present we rail on to Linz, past a panorama of mountains,—amongst which the Traunstein is seen prominently for miles, with an outline at the top that resembles the profile of more faces than one,—there to take water and enjoy the varied beauties of the Danube. Nature is a true mother to her true child: to her real lover she ever brings delight and peace. A poet has already sung the same strain:—

"Nature never did betray
The heart that loved her; 'tis her privilege,
Through all the years of this our life, to lead
From joy to joy; for she can so inform
The mind that is within us, so impress
With quietness and beauty, and so feed
With lofty thoughts, that neither evil tongues,
Rash judgments, nor the sneers of selfish men,
Nor greetings where no kindness is, nor all
The dreary intercourse of daily life,
Shall e'er prevail against us, or disturb
Our cheerful faith, that all which we behold
Is full of blessings."

Happy, thrice happy, the holder of that faith.

* "The Flemish Painters: Notices of their Lives and Works." Murray. 1857.

DESECRATION OF BURIAL PLACES IN IRELAND.

I have recently been in Ireland, seeking for a few weeks' relaxation and pleasure among the beauties of nature and art which abound in this favoured country. I was staying for a few days with a friend in one of the villages of Mayo; and he, anxious to gratify my love for architectural antiquities, took me with his family to visit Ross Abbey, near Headford; our party consisting of several ladies, as well as the gentlemen. This ruin is one of the most perfect instances of an ecclesiastical group that I have ever seen. The walls of its church and monastic buildings remain unroofed, it is true; but its cloisters, staircases, the kitchen with its fire-place, oven, cistern, water-conduits, and scullery, and all the other offices, and the refectory, dormitory, and residential parts are as when first erected. But, sir, its church was a scene of horror!

As is the case with most of the ruins of the old places of worship in Ireland, it is used as a burial-place, and the very floor was strewed with the scattered remains of the dead! Fragments of human skeletons lay at our feet, and we were obliged to tread cautiously lest we should crush these relics of the departed; and skulls and bones, with somewhat less irreverence, were here and there promiscuously piled up in the recesses of the walls or on tomb-stones. In one transept there was a coffin barely sunk in the earth, its top level with the surface of the soil, the lid gone, the sides crushed in, the bones lying in confusion. *Here*, in a recess, where once an altar stood, and the holiest rites of the Roman Catholic church were anciently performed, is a tomb of some pretension, belonging to a respectable family, and the vault sunk in the earth. Two or three of the covering stones were cracked and broken in or displaced, and exposed the scene of desolation below. Several coffins, one over the other, lay transversely, the bones scattered! *There*, is another cenotaph in the nave more pretentious: we looked down into the dark hollow recesses of this receptacle of the dead, and we saw tiers of coffins piled, the upper ones crushing in those below, the remains lying confused, intermixed. Sir, I ask, do we live in a Christian country, and can such things be?

But this is unhappily, and to our shame, not a solitary instance of such desecration. I was at Athenry, and one of the proudest tombs in the sacred enclosure of the church belongs to the family of one of our peers, whose eloquent tongue pleads in the senate with powerful force a nation's wrongs or a nation's rights. The whole surface of the church is strewed with confused blocks of the ruined walls, as thickly strewed as the stone fields of Connemara, and as difficult to walk over. The tombs are in various stages of dilapidation and decay, and overgrown with verdure, not quite to such a degree as in Ross Abbey; but the area is used for the vilest and foulest purposes of human nature. Again, at Mukross, on Killarney's Lake, I could not but admire the care observed in preserving the exquisite ruins of the abbey, which are most judiciously kept, avoiding the trim drawing-room appearance of our Tintern and the foul neglect of Ross, and preserving a wildness

and, at the same time, a propriety and order satisfactory to the feelings of the visitor. But even here fragments of human skeletons lay about to be trodden under foot.

I inquire as to Ross and Athenry, and am told that though there may be a proprietor, he has no general control over the state of the edifice. I cannot learn that either the minister or the priest has any authority. The whole is a scene of misrule; and if any one were so sacrilegious as to attempt to disturb this harmony of desolation, the howls of *Anathema! Maranatha!* would fall upon his head. But, sir, are the ruins of even a consecrated precinct to be thus impiously treated? Are the remains of the dead, of beings whose souls are immortal, and now perhaps in the presence of the Saviour and Redeemer—of the fathers, mothers, brothers, sisters, of the children, perchance, of those still living,—to be mutilated and thus profanely left? The wildest savage is said to expose his dead upon the surface of the plain, to be devoured by the wolf and the hyena; but no witness of his shame remains. The Indian commits the body of his beloved to the waters of the Ganges, as a holy deposit; but the sun, which at its rising shines on the sad corpse as it floats on the surface, does not at its setting see any, the smallest, fragment of the departed. But here Christians can with assumed reverence dig graves and raise memorials to the dead in sacred enclosures, as though the sanctity of the place ensured a resurrection to a life of blessedness and peace; and their unhallowed remains are allowed to be as the very refuse of the vilest animals of creation.

Again, I say, should such things be tolerated in a Christian country? THOS. L. DONALDSON.

THE CLEVELAND IRON DISTRICT.

THE most impressive of the excursions made by the British Association from Newcastle was a visit to "the youngest child of England's enterprise," as the Chancellor of the Exchequer called Middlesborough. This is a new town of 24,000 inhabitants in North Yorkshire, situate on the south bank of the Tees, about eight miles distant from a range of ironstone hills, known as the Cleveland Hills, that has risen with Californian rapidity, but English substantiality, since 1850. In that year we are informed, Mr. Vaughan, of the firm of Bolckow & Vaughan, whilst out walking in the hill district, stumbled over a boulder of ore. He picked it up and examined it; and, being convinced of its genuine quality, prosecuted further researches. These ultimately ended in a determination to mine. The necessary arrangements were made between the firm and the proprietor of the soil, and in a very few weeks the Eston Mines were commenced. It must not, however, be understood that Mr. Vaughan's boulder was the first indication of iron that had come under notice. It was a recognised fact that there was plenty of ironstone; but there was also a practical as well as scientific conviction abroad that it was not of any commercial value. But, on the memorable occasion in question, a nativity was cast: the man, the place, and the time were in conjunction, as a horoscope would say; and flaming, panting, smoking, sweating Middlesborough is the result. Forty years ago the site of this large town was occupied by one farm-house. In old times men used to cut branches of hazel rods, shaped like the letter Y, at the time of certain planetary aspects; and, taking hold of the two forked ends, wasted their days in wandering about in mineralogical districts, hoping the pointed end would direct them to places where they would find veins or seams of ore; and, since then, many fortunes have been spent in testing our underground treasures. In this case, accident proved more potent than centuries of magic and scores of experiments. The wealth that has been hidden for thousands of years was stumbled upon by chance. Neither time nor money has been ill-spent, and a magnificent industry has arisen as with an enchanter's wand.

As like begets like, so luck appears to beget luck. An increased water supply being required for the works of Messrs. Bolckow & Vaughan, it was decided to sink an Artesian well. In the course of this operation, which has already occupied four years, the sinkers came upon a salt-bed, 1,300 feet below the surface. The borings through this bed up to the present date prove it to be of 140 feet thickness, and there is no appearance of having yet exhausted its extent. It is conjectured that this extraordinarily thick stratum lies under the whole town. As Newcastle, in its various chemical works is computed to consume 100,000 tons of salt annually, Messrs. Bolckow & Vaughan will have a market for their vast treasure-trove close at hand. Sections of the strata the borer has so far penetrated were exhibited by Mr. Marley, in the Geological Section, Newcastle, and told the newest secret of the bowels of the earth to the Association. The prospect of inspecting the new and tremendous wealth and wonders which time has so recently revealed, attracted about 280 members to join the excursion to the Cleveland iron district. At the close of the long day, every one agreed that it had been the most pleasant of all the days in the wise week. Not that the weather put forth its smiles; not that the county aristocracy repented them of their disregard, and at the last moment killed the fatted calf, and made science and its representatives welcome; for the sky was sombrely draped in grey, and the scientific circle had received no accessions: but a general though unfathomable impression prevailed that this, the last day of the congress, was the most enjoyable. Iron now occupies so prominent a position among building materials that we doubt not but that our readers will be equally interested in an account of this important iron district and its principal work.

A special train left Newcastle at 8 o'clock a.m., and returned about 11.30 p.m. Before starting every member was furnished with a dinner and wine ticket, as well as with a memorandum of the prominent objects of interest on the route and of the arrangements of the day. Thus they were apprised that after crossing the Tyne by Stephenson's high level bridge they would be in the borough of Gateshead and county of Durham. About eight miles on the way, as they approached the river Wear at Washington, they were to look out for the iron furnaces and chemical works of Mr. Isaac L. Bell, the mayor of Newcastle, and his partners; and the Greek monument on Pensher Hill, erected by public subscription to the memory of the late Earl of Durham. When on the Victoria Bridge, by which the railway crosses the Wear, they were told to observe the towers of Lambton Castle; and, a mile farther on, on the left, one of the principal collieries of the Marchioness of Londonderry. Passing Houghton-le-Spring and Sherborn Hospital, Durham Cathedral and city would be found on the right. At the Ferry Hill junction the train would proceed on the West Hartlepool Railway as far as Billingham junction, and pass Mainsforth, the residence of the late Mr. Surtees, the historian of Durham; Wynward Park, Lady Londonderry's residence; the column founded by the late Duke of Wellington to commemorate his visit to his friend the late Marquis, in 1827; and Messrs. Warners & Company's blast furnaces.

The Mayor and Mayoress of Newcastle accompanied the excursionists. Arrived at the end of this section of the journey, they first conducted their visitors to the works of the firm of which the mayor is a member, at Port Clarence, on the Durham side of the Tees. These are justly admired as the most orderly of all the works that have been established in the district. The furnaces, hydraulic hoists, engine-house, and water-tower are built in one long line. The furnaces and hydraulic hoists are placed alternately in this line of towers, and are connected with feeding galleries at the top, and by two huge iron tubes about midway of their height. The hoists are surmounted with spirelets, and are decorated with Gothic ornament. They serve to hoist the requisite lime, coke, and mine (as the ore is locally called after it has been calcined in kilns, and the water, carbonic acid, and sulphur expelled) to a level with the top of the furnaces. Men stationed on the feeding galleries throw these ingredients on to the hoppers or lids of the furnaces, which descend when they fall in, and then ascend again and close up the openings hermetically. The waste gases made in each furnace are used most economically. They are fanned into flame and employed for raising steam or heating the blast. When the ore is melted it sinks to the bottom of the furnace, and the slag floats upon its surface. Five furnaces were tapped on this occasion. A man stood by each, and took a spike and hammered it into the base of the towering kiln as though he was tapping a huge barrel of beer. The spike thrust in, out streamed a rivulet of bright copper colour into a channel formed for it on the ground. This channel directed the molten ore into a maze of glistening sand moulds placed to receive it, and hold it until it cooled into pigs. Simultaneously with the thrusting in of the spike a shower of sparks is forced out by the blast from a door in the furnace, which is on a higher level than the place tapped, and even with the top of the trucks, into which the slag or refuse is then poured for conveyance away. Each furnace blasts twenty tons of pig iron per diem, *i.e.*, 400 pigs, each weighing 1 cwt. 140 waggon-loads of the ore are brought to the works daily from the mines of the Messrs. Bell, at Skelton and Normanby. Previous to the discovery and use of the Cleveland ironstone, quoting from a paper, by the mayor, on the manufacture of iron in connexion with the Northumberland and Durham coalfield, there were but thirty-five blast-furnaces in operation; but since the consumption of the Cleveland stone seventy-five others have been built, and about twelve others are either in course of formation or projected, making a total of 118. They are worked under different conditions from those of Staffordshire. There the coke is friable, and the mine small. The North Country coke is hard, and capable of resisting great pressure; and the ironstone, worked out of large blocks, is sufficiently large to permit a free passage of air through a much higher column than would otherwise be the case. The practical proof of this assumption was tested by Mr. Vaughan, who erected a furnace 75 feet high. The furnaces of the Messrs. Bell are of a cylindrical form, and of uniform height. The bases are built of stone above the furnace door: bricks are then used. Every third course of brickwork is strengthened with a band of iron, and the cap of the huge pillar is plated with iron. The feeding-gallery, with its brackets and gangway, are entirely of iron, and the quadrangular hoists are iron plated.

Twenty Ordnance maps of the Cleveland district on the one-inch scale were distributed among the visitors; and a copy of a painstaking history of the rise and progress of the town of Middlesborough, by Mr. Landor Praed, in the form of a pamphlet, was presented to each member. Farther on, in the course of the day a reprinted sheet from the *Stockton Gazette* and *Middlesborough Gazette*, entitled "A Day at Saltburn-by-the-Sea," was also placed in everybody's hand.

Crossing the river, whose banks appear sown with chimneys and lined with volcanoes of slag, the excursionists took the Stockton and Darlington line to view the preliminary process of mining, passing, *en route*, Marske Hall, where William Penn spent his honeymoon, and halting by the way at a new watering-place the wealthy manufacturers have resolved to create. This is Saltburn-by-the-Sea. The railway company has already erected a handsome hotel, five stories high, containing upwards of eighty chambers, on the edge of the cliff there. To this Zetland Hotel the party was conducted, and it promptly displayed its resources in a choice luncheon well served. The grounds are laid out tastefully in terraces; and balconies afford still more extensive views. As the scenery is remarkably picturesque and the sands wide and firm for an extent of eight miles, there is but little doubt that Saltburn will prove a formidable rival to Scarborough. At the foot of Cat Nab, about twenty years ago, was a row of cottages with a publichouse at the end of them. Every one of these was inhabited by smugglers, and possessed a secret vault for the hiding of booty; and the sides of Cat Nab and adjoining hills are said to have been honeycombed with caves used for the same purpose. Huntcliffe Nab rises about 360 feet above the sea: here the wealth of the district, ironstone, crops out. Great masses of the rock have fallen, and lie upon the shore in blocks. The strata of these rocks abound with fossils; and at low tide they are found covered with living creatures, more common but equally curious, crabs, lobsters, and small shell-fish. From the top of Huntcliffe Nab may be seen Marske, Redcar, Hartlepool, Sunderland, Tynemouth, and, weather permitting, the Cheviot Hills; and, looking westwards, the hills of Westmoreland and Cumberland.

The immense field of ironstone worked by the Messrs. Pease, at Upleatham, where 2,000 tons of ironstone are wrought out daily, was next examined. There is a great contrast between an iron-mine and a coal-pit. The surroundings of the latter are black and cindery; but the external appearance of an iron-mine is not more unsightly than a cave in a hill-side. In fact, to enter the Upleatham mines, the visitor must ascend a hill in a pleasant country, and when midway between its base and top he will see an opening into the heart of it, into which he must pass. The entrance is further marked by a few miners' cottages, and by the contrivances to bring the ironstone down the hill ready for transport by the rail. On alighting from the train in the valley these are the first objects that meet the eye. There is, too, a depôt midway between the line and the mine. Small trucks, drawn by a miniature engine, bring the ironstone from the mine to the depôt, where their contents are shot into larger waggons on a

lower level. These waggons, when full, run down an inclined plane by their own weight, and in so doing, pull up an equal number of empty waggons, which place themselves under the shoot ready to be filled in their turn. When these are full they run down the inclined plane, and so bring up the first set despatched. The members of the Association were provided with trains of new miniature trucks, of the kind used between the mine and the depôt, the said trucks measuring 3 feet 6 inches by 5 feet at the edge, and sloping down to a space of much less dimension, in each of which four passengers contrived to seat themselves and were conveyed in them to the entrance by locomotives. The drift, as the passage-way into the heart of the hill is called, consists of a central nave, with an aisle on either side of it, supported by timber props. Larch or fir poles form the entrance posts and lintel, and from that point timber props stretch overhead along the drift, and line the sides as pillars on either side of a passage with aisles. This main way was lighted with thousands of paraffine lamps and candles. After a length of 700 yards of it was traversed, the visitors were conducted into a main junction, in which there were many passages leading off from it right and left. Some of these were dark, deserted workings: in others men were at work blasting. The stratum at one place observed is 11 feet thick. The mode of working is similar to that used in a quarry. A channel is bored, gunpowder laid in it, a light applied, and a block blasted out. The men said they received a shilling for every ton of 25 cwt. they detached. They found the necessary gunpowder themselves; but all tools, with the exception of shovels, which they likewise had to provide for themselves, were found by their employers, who held them responsible for them. Along the main lines of passages which are all furnished with tramways, there are places of refuge for people to stand up in while a train of trucks is passing. Turning into one of the workings at the distant end of which there appeared to be a great light or fire, the visitors became conscious of a damp mist or fog; and, as they neared the light, which turned out to be an enormous fire to a ventilating shaft, they could perceive that the mist was being rapidly drawn towards the furnace. No more conclusive proof of the efficacy of a fire could be imagined. The mist visibly floated in the direction of the fire: all the drippings from the roof and walls were thus satisfactorily consumed. The rock or stone abounds in fossils, which are strewn in every direction: these suggest names for the locomotives, one being called the Ammonite. The general tint of this underground city is of a rusty iron colour. Returning in the direction of the entrance to the drift, the visitors saw what at first appeared a blue fire at several hundreds of yards' distance. As they approached it, its appearance partook more of the character of burnished silver: this, as they proceeded again altered, and they found the beautiful phenomenon to be the daylight seen through the mouth of the drift. It was observable that the farther they got out of the influence of the ventilating fires, the more moisture was apparent upon the face of the workings. For this city of subterranean passages, the Messrs. Pease pay royalty fees to the Earl of Zetland, amounting to 12,000*l*. At another entrance into a drift a portable locomotive was observed at work. It appeared to be very busy, yet showed no result. It was engaged in drawing up trucks to a certain point in the workings, whence they started afresh in another direction.

The Eston mines are not less considerable. They are lighted with gas for a great distance into the hill-side, beyond which lanterns are used. They are, however, beyond our present limits, as they were not visited on this occasion, the members of the Association being next conducted to the furnaces and rolling-mills of Messrs. Bolckow & Vaughan, where they manufacture the produce of their mines at Eston. Eighteen hundred persons are employed on these works, which cover 22 acres. Here the newly-found salt-bed may be peered at down the orifice made by the borer. Here the highest furnace in the world (that mentioned by the mayor), is to be seen; and here is a monster nugget of iron-ore, weighing 5 tons and 2 cwt., which well expresses the monster trade to which it has given rise. Sixty boilers hiss around, and the air trembles with the *thud* of steam-hammers and clang of machinery: it appears next to an impossibility to move without falling into masses of molten iron, or getting irretrievably entangled in the rolling-machines; and what with the steam, flames, heat, smoke, smell of sulphur, and din, a very undignified sense of danger is awakened. One of the workers standing close to a blinding furnace, stripped to his waist, with perspiration streaming down his body, was asked how long he could stand the heat and strain at a time. He replied, "An hour and a half at a spell." After the ore is smelted as described at the Port Clarence Works, it is put through the puddling process. Five or six pigs are thrown into a puddling furnace, prepared with hematite or "bull-dog" to receive them, and well puddled or kneaded into large lumps of red-hot metal, weighing a cwt. each. These are seized one by one, by a man at the furnace door, and thrown on to a hand-cart, and wheeled away as quickly as possible to the steam hammer, which forges them into "blooms" or slabs. These are taken, sometimes two at a time, to the puddling-mill, where they are rolled out into puddling bar. From this puddled bar iron rails or ship and boiler plates are made. For rails, slabs of the puddled bar are re-heated and hammered together, and then rolled out: for plates, the slabs are heated and hammered together, and further rolled out. Mr. Bell stated that the old intermediate process of refining was done away with in all the new works, and that those works which possessed refineries were not using them in some cases. The manager of one of the largest Scotch bar-iron works had made him a return of the quantity of Scotch pig-iron required to make one ton of puddled bar. He gives 22½ cwt. of pig for one ton of refined metal; 21½ cwt. three-fourths refined and one-fourth pig to a ton of puddled iron: this equals 23½ cwt. of pig per ton of puddled iron; and when the pig is not refined, but puddled direct, 23½ cwt. are required for one ton of puddled iron. The Cleveland process gives a more economical result. From two works using pig iron of Cleveland ironstone, returns showed that the produce for the whole of 1862, was 22 cwt. 0 qr. 16lb. of pig to the ton of puddled iron; and for the first six months of 1863, it was 22 cwt. 0 qr. 17 lb. at the same work. The second establishment gives for the year 1862, 22 cwt. 0 qr. 16 lb. of No. 4 iron to the ton of puddle bar. The loss, therefore, on iron produced from Cleveland ironstone is only about 66 per cent. of that on Scotch; and the quality of the former dispenses with the necessity of refining it.

The first step in the rapid growth of Middlesborough, was the fact of its having been selected as the terminus of the Stockton and Darlington Railway (George Stephenson's first work), and the shipping-place for coals brought down that line: the last step was the opening out of the ironstone in the neighbouring hills, as we have related. It is still increasing in population as well as in commerce. There are other works in the town only second to those we have mentioned. Messrs. Hopkins's works cover 14 acres, and have 300 yards of river frontage. They have two blast-furnaces, making about 600 tons of iron weekly, and employ about 600 men. The works of Messrs. Gilkes, Wilson, & Co. occupy a similar area. Girders and ribs for bridges, dock-gates, locomotives, boilers, tanks, anchors, cables, railway bars, sleepers, and every description of iron-work are carried on in this busy town. The new meat market is made of iron. Houses rapidly spring up: in 1840 there were 600: in 1861 there were 3,295: last year 500 more were erected and inhabited. There is a church, dedicated to St. Hilda, and eleven chapels, a corporation-hall, mechanics' institute, a literary and scientific institution, an Odd Fellows' hall, and two banks. The various ministers hold preaching and praying services in the pattern shop of the Messrs. Bolckow & Vaughan whilst their men take their breakfast; a custom first introduced by Messrs. Gilkes, Wilson, & Co.

The drawback to this bright picture of piety and industry is the unwholesome state of the atmosphere, induced by the smoke with which it is laden. The best plan to mitigate its effects is to provide the workers with large, lofty, light rooms, to live and sleep in, with an abundant supply of good water. After the dinner provided for the visitors by the Corporation and gentlemen of the district, guests and entertainers exchanged courtesies. Among the speakers was the African lion, Captain Grant, who stated that he had seen iron in Africa; but children only were employed in manufacturing it, who did so by blowing into a furnace formed of sticks.

At Jarrow, the various processes employed in the manufacture of iron are all accomplished in the establishment of the Messrs. Palmer. The ore is brought in at one end of their premises, and turned out at the other manufactured into iron ships. Cinderella's godmother, when she turned the pumpkin into a state carriage, did not make so wonderful a transformation. If enterprise continue to progress at this rate, our stock of fairy tales will prove insufferably insipid to our descendants.

BRITISH ENGRAVERS.—NEW MATERIALS FOR THEIR LIVES.

SIR ROBERT STRANGE.

In an article, entitled "Town and Table Talk," in the *Illustrated London News* of the 21st of October, 1854, the following extraordinary statement, connected with a forthcoming life of Sir Robert Strange, appeared in print for the first time:—

"We have heard a curious story about Strange's copperplates, which Mr. Dennistoun should either confute or confirm. Long after the great engraver's death, a portion of his stock was sold at Christie's, we believe, by order of his son, then a judge in India. A second sale took place some time after, at equally high prices; and a third soon followed, when the prices fell. The remaining stock was then sold, with the plates, to a well-known firm in Pall-mall, who are said to have made 'a good thing' of it, by working the plates till they could stand no more even tolerable impressions. The plates were then defaced and sold as waste copper, with a condition that they were to be destroyed. This condition was, however, not complied with. The slashes were skilfully removed: the plates were then retouched; and an attempt was made by the party to whom they had been sold to supply the market with another portion of the stock. Some law proceedings followed, and the plates in consequence were at length effectually destroyed."

The statement attracted a large share of attention in the realms of art, and did not fail to fall under the eye, as it was meant it should, of Mr. Dennistoun himself. The following letter was the result:—

"Private.] Edinburgh, 119, George-street,
23rd October, 1854.

Sir,—In your last number, page 391, is an allusion to a small work I am about to publish, of which I shall only say that I shall be glad if the *Memoirs of Strange* do not disappoint the expectations you kindly express.

I believe that your paragraph regarding the destruction of Strange's large copperplates is in the main correct; but, as your informant seems acquainted with the facts, it would be very satisfactory to me to have an opportunity of communicating with him. My information comes from a good source, but is, perhaps, scarcely complete; and as I am, of course, desirous of perfect accuracy, I should feel very much obliged if your correspondent would enable me to correspond with him on the subject, by addressing me here.—I am, &c. (Signed) James Dennistoun."

As the writer of the article referred to, Mr. Dennistoun's letter was put into my hands. I at once wrote to him in reply, and gave up my authority for the statement. The substance of that statement was as follows. I transcribe a memorandum of a conversation made by me for future use long before Mr. Dennistoun's work was announced:—

"1850. Called on Frank Graves in Pall-mall, and had an interesting chat with him about Walpole's 'Anecdotes of Painting,' for a new edition of which he has made many memoranda as I myself have done. Mr. Haviland Burke, Mr. Sackville Bale, and others, looking at some choice Sir Sir Joshuas, our talk turned on Sir Robert Strange and the poor impressions that exist from many of his noble plates. F. G. then told me the following story:—

'Strange had a son a judge in Madras—Sir Thomas Strange—there is by the way an engraving of him by Charles Turner after Sir Thomas Lawrence. When the judge went to India he left all his stock of his father's plates, and the copperplates themselves, with Payne & Foss, in Pall-mall. He afterwards gave instructions for their sale, and Christie sold them. I have the catalogue at home. There were, I think, three sales: the first brought large prices, the second good prices, but the third drugged the market. The copperplates themselves, after a trial by Dixon, were defaced and sold to a man in Portland-street, on the distinct understanding that they were to be destroyed. The purchaser broke the conditions of sale: he did not destroy the defaced plates, but effected an arrangement for their restoration with Colnaghi & Puckle. The restoration proved a failure. The faces had been slashed through. Some law proceedings followed. The plates were given up to Lady Strange, and at length irrecoverably destroyed. I do not know a parallel case to it of equal consequence in the history of engraving. The worn-out plates produced, I need hardly tell you, impressions injurious to the great and well-deserved reputation of Sir Robert Strange.'

When I add to Mr. Graves's narrative the

simple fact that there is no English master of whom certain proofs are so rare, the man's many motives for furbishing up the old plates into a working condition may be fully understood."

It is a well-known circumstance in the life of our great engraver, that he was "out" for the Pretender in the fatal forty-five, and by what means he escaped the scaffold. An *unknown* anecdote connected with his Jacobitism I found recorded by Lord Buchan on the back of a letter from Lady Strange, written in 1787. King George III., though never wholly reconciled to Strange, consented to his engraving the well-known Apotheosis picture of two of his children. The patronizing earl found Strange at Buckingham House (the Queen's house), and gave loose to his tongue on so tempting an occasion. They were together, he tells us, in the king's bedchamber while the room was getting ready for the king's use. "I could not resist," he records, "the impulse of taking Sir Robert into a corner and saying, 'My dear Sir Robert, who would have thought of this—in the year 1746?'" Our great engraver was in a very fair way for Carlisle walls or a Tyburn tippet. We were nearly losing those masterly Jacobite engravings, from Vandyke, of "Charles Stuart in his Coronation Robes," of "Charles Stuart standing by his Horse," and of Charles's three children. Strange did not disguise his Jacobitism: nor did his friend, Allan Ramsay, the painter, conceal, when in London, his liking for the exiled family.

Sir Robert Strange was his own publisher, and made money by the publication of his own engravings. Here is one of his addresses "To the Public," dated in the last year of the reign of King George II.:—

"*To the Public.*

Many reasons have been assigned why the imitative arts have not yet in England attained that perfection at which they have arrived in Italy and some other parts of the Continent. The following, though not much attended to, will be found to have had great influence in retarding their improvement. In this country an artist, having acquired a degree of reputation sufficient to attract the notice and favour of the public, is too often seized with the desire of turning this reputation to the best account with respect to his private circumstances. Instead of exerting all his faculties for the extension of his genius and the improvement of his art, his endeavours centre in schemes and efforts to increase his fortune.

The author of the following proposals, far from pretending a total inattention to interested motives, proposes to unite both objects in the plan of his future conduct. He hopes he has given manifest proofs of his inclination to improve in his art, by the different specimens which he has already exhibited: and it is with pleasure he takes this opportunity to express his grateful acknowledgment for the favourable reception they have met with from the public. This indulgence, and the love he bears to his profession, has encouraged him to proceed in his favourite plan, and to devote himself entirely to the study of engraving historical pieces.

Every admirer of painting must observe with regret the decline of this branch of engraving in Europe. Italy has, within these few years, lost her Jacomo Frey. Ever since the days of Rubens and Vandyke, when Bolswert, Pontius, and Vosterman flourished, this art has been almost totally neglected in Flanders and Holland; and France has not now a Gerard Audran nor an Edelink. In this last nation, indeed, there are still many excellent artists, such as Cars, Dupuis, Le Bas, and others; but we cannot help lamenting that these have exercised their talents so little upon the Roman, Florentine, Lombard, and Venetian schools; a circumstance probably owing to their partiality for their own painters, and a decline of the public taste. Hence the French nation has for many years preferred the humble productions of Teniers, and others in the same style, to the sublime compositions of the Italian masters. Influenced by these considerations, Mr. Strange proposes to visit the treasures of Italy, where alone he can judge with certainty of the works of a Raphael, Corregio, Titian, Carracchi, Domenichino, &c., and where there are a great variety of capital pictures which have never yet been engraved. He proposes to spend some years in making drawings after the works of the most celebrated masters, some of which he may probably engrave during his residence at Rome or Florence. This undertaking, he flatters himself, will prove acceptable to all nations that love and encourage the liberal arts: it may diffuse over Europe beauties in painting which are now confined to one place, transmit to posterity some of the finest works of art that are daily perishing, and may do some little credit to the taste of our own country.

Every person of taste, while he approves of this undertaking, will at the same time be sensible of the great expense which must necessarily attend it, especially as the author can reap no immediate pecuniary advantage from his labour. He is, therefore, encouraged to hope for such a generous subscription to the subsequent proposals as will enable him, without forgetting his duty to his family, to execute his design at leisure, and with all proper attention; as the advantage, however considerable, which he may reap from the liberality of the subscription, will be chiefly employed for the further entertainment of his patrons.

London, March 5, 175 .

Proposals for engraving, by Subscription, Three Historical Prints. The first represents 'St. Agnes,' by Domichino; intended as a Companion to the 'Beisarius,' some time ago published from Salvator Rosa. The second exhibits 'Venus Attired by the Graces,' by Guido Rheni. Both of these are in the Royal Palace of Kensington. The third is 'The Judgment of Hercules,' by Nicholas Poussin; in the Collection of Henry Hoare, Esq. By Robert Strange.

A drawing of the 'St. Agnes,' and Specimens of the Work, may be seen at the Golden Head, Henrietta-street, Covent-garden; where the subscription is opened, and will be continued till the End of May.

N.B. That he may be the better enabled to execute his plan, Mr. Strange has come to a resolution of disposing of the drawings from which all his engravings have been made. They will be shown with the other specimens as above.

Conditions.—I. The work will be printed on the finest paper. II. The subscribers will be served with the first impressions. III. The price, one pound four shillings; half a guinea to be paid at subscribing, and the remainder upon the delivery of the prints, which will be finished with all possible expedition."

I have said that he dealt in pictures, and to good purpose, though two priced catalogues now before me, each a two days' sale he had at Christie's in 1773 and 1775, do not exhibit anything approaching to the Christie & Manson prices of 1863. I will give an example or two of pictures and prices. A Nicholas Poussin, "The City of Terracina," painted in 1648, was bought by Sir Watkins Wynne for 650*l.*; a Claude, "A Landscape, representing the Coolness of the Morning," was bought by Lord Chesterfield for 420*l.*; and a Leonardo da Vinci, "Our Saviour with the Virgin and St. Joseph, &c.," was purchased by Lord Clive for 270 guineas. Are these pictures now known, and will they in these days more than maintain their early Christie prices?

Lot 48. Friday, May 5, 1775, has a genealogy suggestive of pleasant thoughts—the well-known picture in our National Gallery, "The Return of the Ark," by Sebastian Bourdon. The purchaser was Sir Joshua Reynolds; the price only 23*l.* 2*s.* Sir Joshua left this fine picture to Sir George Beaumont, and Sir George gave it to the British nation. What Sir Robert, Sir Joshua, and Sir George thought a good picture must merit the approbation of the choicest connoisseur.

A Holbein purchase made for 13*l.* 2*s.* 6*d.* (good things were then cheap) will interest Lord Stanhope:—

Lot 51. HOLBEIN.—A portrait of Edward VI., formerly in the Royal Collection, and presumed to be one of the capital works of this master.

A Vandyck (its whereabouts now, I believe, unknown) should put Mr. Scharf on the look-out for such a portrait treasure.

Lot 115. "The Marquis of Montrose, a half-length, painted originally for King Charles I., and purchased by one of the Dukes of Valentinois, who had been connected with Montrose when in France. It remained in that collection till of late years, there being a division in the effects of that family between the present Duke and his brother, the Prince of Monaco, when this picture was purchased. Certain it is, there is no other original of this great man extant that we know of, not even in the possession of his descendants."

The sale price under Christie's hammer was 84*l.* The purchaser was Sir William Maine. Who has it now? Mr. Mark Napier, the biographer of Montrose?

Letters of Sir Robert Strange and letters relating to Sir Robert are of rare occurrence. In my long experience of autograph sales I do not remember to have seen his handwriting. From two letters in the characteristic handwriting of his wife I have MS. memoranda. In one she refers to her husband's portrait of Dr. Archibald Pitcairn — the first he published. "It never made its way in the world," she observes, "and Mr. Strange will be very well pleased that it should remain in oblivion." This was written in 1763. Why in oblivion? In the other letter, dated 30th April, 1791 (it is addressed to Lord Buchan) she tells her correspondent that Sir Robert had "gone to Ramsgate for his health now much impaired, and not to be wondered at," she well observes, "after his forty years of close application to his art."

Sir Robert Strange died 5th July, 1792, and is buried beneath a nameless stone in St. Paul's, Covent Garden. Lady Strange died 28th February, 1806, and Isabella Katherine Strange, their daughter, died at Southampton, 14th March, 1849, in the ninety-first year of her age. Who else alive in 1849 could have said that her father had been "out" in arms in the fatal forty-five,—not "sixty years since," like Waverley, but "one hundred and four years since?" Thus much

"Thus of 'enough, enough, and now no more,
As honest old George Gascoigne said of yore,'"*

touching a great artist who could engrave human flesh better than it has been engraved before or since his time, and "who has never been equalled (I use John Burnet's words) in all that pertains to colour and texture."

PETER CUNNINGHAM.

* Southey's Epistle to Allan Cunningham.

THE LATE MR. JOSEPH GWILT, ARCHITECT.

We have again to fulfil a sad duty, that of recording a loss to our profession, by decease of one of its most eminent members. Mr. Joseph Gwilt, a name to be honoured by every present and future student or professor of architecture, died on Monday, the 14th ult., at South-hill, Henley-on-Thames, where he had lately resided. He was in the eightieth year of his age. For the last few years of his life, he was retired from the profession which he had so long pursued with unwearied assiduity; and, during many years previously, he was scarcely known to the present generation of architects, except by his valuable contributions to architectural literature. But, by these he was universally known. His works have, most of them, gone through several editions; and his "Encyclopædia" is a production of extraordinary value, whether for purposes of elementary and advanced study, or for those of general reference. It has *lacunæ*, which have been pointed out; but its fulness, and yet conciseness, constitute it a monument of the labour of one man, and a work of so much importance that it must be taken in great measure as foundation of future treatises and text-books of the encyclopædia and dictionary class, and of several other kinds. This work, however, was not the only one for which Mr. Gwilt's name deserves to be honoured, or will have to be recorded in the short summary that we are able to give of the incidents of his life. These, or so far as we have them at hand, will be found comprised chiefly in particulars of his published books.

Joseph Gwilt was born in the parish of St. George the Martyr, Southwark, on the 11th of January, 1784. He was the son of Mr. George Gwilt, architect, who was Surveyor to the county of Surrey, and erected Horsemonger-lane Gaol and Newington Sessions House, besides other buildings. The elder Gwilt died on the 9th December, 1807. One of his sons was George Gwilt, born the 8th of February, 1775, who became an architect, and whose name is well known in connexion with the restoration of the choir and the Lady Chapel of St. Mary Overie's Church (St. Saviour's, Southwark), and with the restoration of the steeple of Bow Church, and the works of reparation and maintenance of the foundations, in the course of which the remains of the original Norman building were discovered. This George Gwilt, the younger, had commenced his professional career about the year 1801, with the building of warehouses at the West India Docks. He became, however, best known as an antiquary. Some notice of his life may be found in our volume for 1856, in which year, on the 27th June, he died, having passed the age of eighty-one. Joseph Gwilt was a younger brother of George.

After having passed some years at a boarding-school, Joseph Gwilt was sent at the beginning of the year 1798, or when he would be about fourteen years of age, to St. Paul's School, where he remained nearly two years. At the end of the year 1799, he was placed in his father's office. He was admitted a student of the Royal Academy in 1801; and he obtained the Silver Medal of the Academy on the 10th December in the same year, for the best drawing of the tower and steeple of the church of St. Dunstan-in-the-East. In 1811, he published a work on the equilibrium of arches, which proceeded to a second edition in 1826, and later, to a third edition, from which (though this edition does not appear to have had the author's sanction), we transcribe the title,—"A Treatise on the Equilibrium of Arches, in which the Theory is demonstrated upon familiar Mathematical Principles. London: John Weale, 1839."* In 1815, on the 9th of March, he was elected a fellow of the Society of Antiquaries of London. At the end of the following year, when he would be approaching the thirty-third year of his life, he visited Rome and the other principal cities of Italy. How long he was absent, we are not aware. Some time previous to his departure, in order that nothing worthy of notice might escape him, he compiled a species of *catalogue raisonné* of the buildings in the chief towns, classified under the names of their architects. Having every reason to be satisfied with the result in economy of his time, he thought fit to publish the catalogue, with some preliminary and other matter. The work appeared in 1818, under the title "Notitia Architectonica Italiana; or, Concise Notices of the Buildings and Architects of Italy, preceded by a Short Essay on Civil Architecture, and an Introductory View of the Ancient Architecture of

* 8vo., pp. xvi. 104. 4 plates and frontispiece.

the Romans. To which are added some Tables of general use, and two Plates. London: printed for the Author, and sold by T. Egerton, Military Library, Whitehall. 1818."* The different cities and towns are arranged alphabetically, and in cities where the objects are numerous, a list of all the buildings is first given, with a figure or figures before each, referring to a corresponding figure in a section immediately following, wherein the works of each architect are kept distinct, so as to show all that was done by him in that particular city. The principal table in the latter portion of the volume, is a list of the architects mentioned in the preceding part, with the dates of their births and deaths, and the names of the cities and towns wherein they were employed. Then follow a list of the popes from the year 999, with their birthplaces, and the names of English sovereigns that they were contemporary with, some foreign measures, a table showing the ratio of the walls and points of support of several edifices to the total superficies which they cover, and a short table of dimensions of various edifices in Europe. This "Notitia Architectonica" deserves to be better known to architects of the present day, both as a handbook in travelling and a work of reference; and it would well deserve to pass to a new edition. The bulk, if not all of the matter, however, may be found embodied in the "Encyclopædia" of a later date.

In the year 1818, we find his address 20, Abingdon-street, Westminster; and there he continued to be till recent years. About the same time, as we learn, he was a contributor to several periodicals.

In the year 1820, he wrote, and in the following year he printed, a pamphlet entitled "Cursory Remarks on the Origin of Caryatides," which he addressed to the late John Britton, but did not publish. He reprinted the matter of it, however, in his introduction to "Chambers's Civil Architecture" (p. 53 *et seq.*); and the substance of it is also included in his "Encyclopædia." In 1822, he seems to have made the design for new London Bridge, which forms the frontispiece of the edition of his "Equilibrium of Arches," of which the exact title has been given above. On the subject of the bridge, a pamphlet came from his pen in the year following. This would appear to be the *brochure* entitled in one of Priestley & Weale's catalogues, "The Conduct of the Corporation of the City of London considered, in respect of the Designs submitted to it for rebuilding London Bridge, in a Letter to George Holme Sumner, Esq., M.P., by an Architect." In 1822, he had published the first edition of the well-known work on the projection of shadows; and in the beginning of 1824, this came to another edition where the title reads:—"Sciography; or, Examples of Shadows; with Rules for their Projection; intended for the use of Architectural Draughtsmen and other Artists. Second Edition, with considerable additions and improvements, and six additional plates. London: Printed for Priestley & Weale, Library of Works on Art, High-street, Bloomsbury. 1824."†

At the date of first publication of this work, it does not appear that there was any useful and practical English treatise on the projection of shadows; although there were several French works. The author's original intention was to have published a mere version of Stanislas L'Eveillé (Études d'Ombres); and he had actually translated that work and redrawn the examples; but he subsequently saw reason to change his intention. To L'Eveillé, as well as La Vallée, however, he acknowledges obligations, whilst claiming to have made his own work clearer than theirs.

In 1823, on the 4th of March, he had read at "the Architects' and Antiquaries' Club," "An Historical, Descriptive, and Critical Account of the Cathedral Church of St. Paul, London." This was "ordered to be printed by the committee," and a copy is now before us.‡ It bears the motto, on the title-page, from Hooker, who seems to have been one of Mr. Gwilt's favourite authors,—"We count those things perfect which want nothing requisite for the end whereto they were instituted." Some half-dozen pages, additional to those which were originally written by Gwilt, and two plates, would appear to have been added by Mr. Brayley. The copy is marked "Not published." But the plates and letterpress seem to be identical with those of the account of St. Paul's Cathedral, in Britton and Pugin's Public Buildings of London, that bears Mr. Gwilt's name.

* 8vo. pp. lvi. & 140. † Pp. viii. & 55. 24 plates.
‡ 8vo. pp. 40, eight plates.

In 1824, he published a sheet engraving, giving a Comparative View of the Four Principal Modern Churches in Europe by means of transverse sections of them to the same scale.

In 1825, was commenced the publication of the well-known octavo edition of Chambers's Civil Architecture, which Mr. Gwilt enriched with valuable notes, and prefaced with original matter on Grecian Architecture and several plates.* The work appeared in six numbers, on the alternate months, and is generally bound in two volumes. Mr. Gwilt's preface (to which there is a note giving a long extract from a magazine article by the late Mr. J. B. Papworth in defence of Chambers) and a memoir of Chambers by Mr. Thomas Hardwick fill 52 pages. These are followed by the matter, by Gwilt, entitled "An Examination of the Elements of Beauty in Grecian Architecture, with a brief investigation of its origin, progress, and perfection" (66 pages), and by eleven plates giving examples of the Greek orders. This "Examination" includes a statement of principles that had not previously been expounded with the same clearness; although lately they may have been recognized by most of those who have written on the subject of beauty and design in architecture. The plates in the body of the work, were carefully reduced from the folio size of Chambers's latest edition, from which the text was taken. In the "Examination," in a note, particulars were first given of some of Barry's investigations in Egypt, with certain reproductions of his sketches, which constituted a very important contribution to our knowledge of the Egyptian derivation of Grecian architecture. In 1826, Mr. Gwilt produced his well-known translation, which he had been engaged upon for many years, of the Architecture of Vitruvius, the only complete translation of the ten books, in the English language, that has any merit.† The translation is preceded by a short life of Vitruvius, and a list of the several editions and versions; and it has ten plates, besides vignettes to the ten books. There is also a good Index. In the same year, he published an octavo volume, the "Rudiments of Architecture, Practical and Theoretical, with Plates."‡

This work treats of the materials used in building, and of their combination, of the orders, arcades, proportions of rooms, and many other matters of architectural design; and gives a "Cursory View of Ancient Architecture," and a Dictionary of Terms, besides a table of foreign measures and length. The contents of this little work, with the illustrations, may be considered as afterwards included in the "Encyclopædia."

In 1833, Mr. Gwilt was elected a member of the Royal Astronomical Society. He always upheld the importance to the architect, of being a sound mathematician. In addition to his other acquirements, he was an accomplished musician; and the treatise on the Art of Music, published in the "Encyclopædia Metropolitana" in 1835, was from his pen. Somewhere about the same time, he also wrote a small work entitled "Rudiments of the Anglo-Saxon Tongue," which was published by Pickering.

In 1837, Mr. Gwilt published a thin octavo, but embodying much historic and other information, under the title, "Elements of Architectural Criticism for the Use of Students, Amateurs, and Reviewers," to which he joined in the following year an "Appendix." The first publication was meant to controvert certain opinions on the merits of the modern German school of architecture, which views had been put forth in several articles in the *Foreign Quarterly Review*. The faults of the Museum at Berlin, and of the Pinacothek at Munich, are exposed: justice, however, was hardly done to those works, or to their character of art. For a reference made to the critics, in the "Elements," Mr. Gwilt was not soon forgiven; and the results were many subsequent expressions of opinion, in which neither side was quite right, and differences not exactly tending to more accurate views amongst the public on the subject of art. In a letter to the writer of this present notice, in 1856, he said:—"As to the German controversy, it was mixed up with *personal* reflections on Soane, which, at the time, though no admirer of his taste in design, I thought unjustifiable, and which no doubt added a little to the acerbity of what I wrote; and, moreover, I did not approve of my brother artists and countrymen being run down, knowing the talent there was and still is amongst them." And he added, referring to the competition for the Government offices then in agitation:—"I should not be surprised in this great Downing and Parliament Street competition, if an attempt is made in favour of some German architect in the disposition of the premiums." The "Elements" were inscribed by Mr. Gwilt, to his friend Mr. C. R. Cockerell, now deceased. In 1842 the Encyclopædia of Architecture was first published.* The author acknowledges that he has taken some matter direct from such writers as Euler, Rondelet, and Durand, and from the *Encyclopédie Méthodique;* and he mentions that he has preferred Rondelet's matter on arches to his own; whilst he has thrown aside, to greatly improve upon, his own Sciography. But he believes his attempt to produce a *Complete Body of Architecture*, an entirely original one. We have already expressed high opinion of the attempt. Some of the few omissions were indeed strangely made, and seemed to have been made under influence of prejudice. In later editions several of these were remedied.

One of those editions, the second of the work, appeared in 1851; a third came out in 1854; and a fourth, at a cheaper rate, appeared in 1859.† In these later editions, the old Building Act, printed at length in the first edition, was taken out, as having been repealed. In place of it was inserted an Appendix or "Supplemental View of the Symmetry and Stability of Gothic Architecture." This was to be had separately. The author said of it, in one of his communications, in 1856:—"I did not think of mentioning it; though I think the infinite number of self-created critics now-a-days on the subject, might learn something by a perusal of it: but this may, on my part, partake of some degree of self-estimation." In the year of publication of the first edition of the Encyclopædia of Architecture, 1842, he contributed to "Brande's Dictionary of Literature, Science, and Art," all the articles relating to architecture and music. A second edition of this dictionary was published about the year 1854. We have, perhaps, not mentioned all the nominal editions of Mr. Gwilt's works. Some of the plates and copies of the works published by Weale and his partner, at one time got out of the original hands, and may have been re-issued merely with new title-pages. We have given, however, the dates to the last editions that received the author's supervision. In 1838 there was privately printed, in the form of a pamphlet, or thin 8vo., with plates, "A Project for a National Gallery on the site of Trafalgar-square, Charing-cross, Proposed and Designed by Joseph and John Sebastian Gwilt, Architects." The proposal, which it will be seen dates long subsequent to the completion of the present buildings in Trafalgar-square, was for the erection of a building on the ground which is now occupied by the asphalted area and fountains. Mr. Gwilt's last literary labour was the editing a new edition, published by Mr. Bohn, of the "Principles of Architecture" of Peter Nicholson, whose labours were held by Mr. Gwilt in great esteem. He revised the work, made many corrections, and supplied a plate that had been omitted.

Mr. Gwilt's works as a practical architect, included the church at Lee, near Lewisham, lately pulled down, and the approaches to Southwark Bridge. His principal work was Markree Castle, near Sligo; and one of his most recent, was the Byzantine church at Charlton, near Woolwich, dedicated to St. Thomas. He also designed and executed additions and alterations to the hall of the Grocers' Company, or the premises extending from Grocers' Hall-court in the Poultry to Princes-street by the Bank; in which latter street, an elegant Italian doorway may be judged as having come from his hand. To this company he was surveyor. He held a similar office for the Waxchandlers'; and he was also architect to the Imperial Insurance Company.

Mr. Gwilt was one of the surveyors of the sewers in Surrey, having succeeded his father. The district extended from East Moulsey into Kent, to the river Ravensbourne. His tenure of the office ceased about the year 1846.

In one of the notes before alluded to as ad-

† These editions have 1,092 pp.

dressed ten years later, to the present writer, he wrote,—"Mr. Chadwick got us all bundled out; and I rather think the consequent confusion and curious schemes for draining the metropolis, are only now at their beginning;" and in another,—"With the old Commission I never had any rupture, having held office under it for upwards of forty years. When the *general* Commission was appointed, I declined to act under it from the beginning, and never did act. I received from it a very complimentary letter for past services, but no compensation for loss of office. I totally disapproved of the Chadwick system, and therefore would have nothing to do with it." Mr. Gwilt advocated sewers of large dimensions in contradistinction to a proposed system of pipe sewerage. Both extremes of opinion have since undergone modification.

Mr. Gwilt's evidence was frequently sought for by committees and commissions, on questions relating to the subjects over which his wide range of study and pursuit extended. Though known as the author of few designs or erected buildings, he possessed in an eminent degree the combination of attainments required in the practical architect; and the manner in which these attainments were turned to account for the benefit of the profession and students, should entitle his name to a permanent debt of gratitude.

POPULARISING PHYSIOLOGY.*

Dr. Lawson is Professor of Physiology in Queen's College, Birmingham; and one of the lecturers on natural science under the Science and Art Department of the Committee of Council on Education. This little work of his is one of the best we have seen of the popular treatises, in plain and intelligible language, on a science so full of "loud-sounding essays and terrific jaw-breaking Greek names," as Physiology usually is. The volume is illustrated by instructive engravings of the various organs, and tissues, bones, blood-vessels, nerves, &c. The lively description of the process of digestion, from its preliminary stages in the mouth and fauces, where the food is triturated and mixed with the solvent saliva, to its absorption into the general circulation, after passing through the stomach and intestines, where it is dissolved, is particularly well and popularly written, and must be understandable by every reader, so far as it is understandable at all at present; for here, as elsewhere throughout the animal economy, there are still mysteries even to the most skilful and learned physiologist.

In this especial branch of the subject, by the way, we observe what cannot but be held to be an important omission as regards the route of the food and its connexions with the blood circulation. Not one word that we can recollect relates to the very peculiar and important system of the vena portæ, which connects the venous absorbents of the stomach and intestines directly with the liver; and, through that, with the general circulation. This system bears a strong analogy to the pulmonary circulation, connected with the lungs; and it is probably only the comparative obscurity in which the functions of the liver are still involved which prevents physiologists from regarding the hepatic or liver circulation as not only analogous to the pulmonary or lung circulation, but of probably equal importance with that to the constitution of the blood; and this is saying a good deal, considering the association of the lung circulation with the respiration and the vital air. Dr. Lawson himself explains, in a very interesting way, how the food, *all but what is in it of the fatty and starchy* FUEL, as it were, of the frame, is absorbed,—during its rotary motion in the stomach, and after its mixture with the acid gastric juice,—by the venous circulation in the coats of the stomach; but he does not tell us clearly where this dissolved food then goes; leaving us rather to suppose that, like the dissolved fatty matters and the saccharized starch, which are prepared by the alkaline pancreatic juice and the bile in the duodenum or second stomach and absorbed by the lacteals,—it is sent at once into the general circulation; whereas, it is a very remarkable fact that it is precisely, and only, the venous blood which comes from the intestines, and which carries the dissolved food (the portion of fatty and sugary fuel already prepared, thus forming a no less remarkable exception), that is conveyed to the liver *before* being sent into the general circulation. Majendie and others also long since demonstrated, that all fluids the basis of which is *water*, were absorbed from the stomach and intestines by the veins (and not by the lacteals) and conveyed direct to the liver, where this water appeared to exercise some special influence on the blood, were it merely from the thorough *amalgamation of the water and the blood* here effected; and the question which at once suggests itself, on a proper consideration of this fact, is,—may not water bear a similar or analogous relation to the blood in the liver with that which air bears to it in the lungs?—a question, the significance of which is much enhanced by the circumstance,—which a little reflection as to the breathing apparatus in this connexion clearly shows,—that the diaphragm, or midrif, is so situate, with the lungs above and the liver below, that while, by its contraction and its connexions with the ribs, &c., it *expands* the *lungs*, it at the same time *compresses* the *liver*; and, *vice versâ*, while, by its relaxation, it *compresses* the *lungs*, at the same time it *expands* the *liver*.

The comparative obscurity in which the functions of the liver are still involved is thus admitted and described by Dr. Lawson:—

"Some physiologists have thought that the liver, besides secreting bile, altered the blood passing through it, by giving it sugar. The notion has recently been completely upset; so that, though this organ *may* fulfil other offices besides the formation of bile, the latter is all we can maintain to take place in it. The ancients believed that the liver exercised a powerful influence over the mind; and . . . . there is no slight reason to suppose that the state of the mind *does*, in some measure, depend upon the condition of the liver."

So that the ancients may have known more of the functions of the liver than all the little that the moderns seem confessedly to do; and hence, perhaps, the singular and obscure allusions, in the East, to bosom friends as "the life of their liver;" and the mysterious mythological connexions of the liver; such as the liver of Prometheus, growing by night and being devoured by day. Plato, apparently with mythological significance, tells us that the liver is the seat of the spirit of prophecy; and, even in Christian doctrine, we have evident and curious allusions to the liver of "him who *came by water and by blood*," in the wound of the right side, whence "there came forth *water and blood*."

As to Dr. Lawson's hint that the formation of sugar has been attributed to the liver as its re-cretory function, although physiologists may have been right in rejecting this hypothesis, is it not an instructive fact that it is precisely the sugar, either swallowed with the other food, or produced from the starch of the food in the duodenum or upper portion of the intestines, which, *along with the oleaginous or fatty material* of the animal fuel, passes through the lacteals into the general circulation, and does *not* pass first through the liver? The oleaginous and sugary materials thus passed on are just so much of the fuel as is *already prepared* for the combustion which takes place in the lungs; and we thus see that when the more fitting materials for this fuel are got from without, they are dissolved in the intestines, and *sent directly to the lungs, while all else is sent to the liver*; and, when we also consider that, in certain diseases, the liver is found to be gorged with fatty matter, and in others with sugar; may not physiologists have been rather hasty in concluding, as they have at least indirectly done, that the liver has nothing to do with the final preparation of the food into blood before it is sent to the lungs? and, on the contrary, would it not rather appear *as if the liver were the hydridizer of the food*, by means of water, and so its final *solver*; just as the lungs are the *oxydizer of the food* by means of air, and so its *concreter* (as oxygen is now found to be), into *clotting* blood, fit for the repair of the tissues?

This, however, is a subject on which we cannot here enlarge: we only desired to point attention to a very important matter which, perhaps excusably, has been overlooked by Dr. Lawson in his very able popularization of the recondite science of physiology. Such books as this belong to us as bearing materially on the "public health" question. The spread of information of this description would save much illness.

* A Manual of Physiology; being an Attempt to Explain the Science of Life in Untechnical Language. By Henry Lawson, M.D. London: Hardwicke.

THE SITE OF FOLEY HOUSE, AND CROOKEDNESS OF LANGHAM PLACE.

Whoever deliberately perambulates a large town may observe many strange contortions and obstructions in the arrangement of the streets and buildings, which must appear unaccountable to those who view them in after ages. It is now more than sixty years since our Government determined to make a good leading thoroughfare from where Carlton House once stood, in Pall-mall, to the Regent's Park (formerly Marylebone Fields), and proposed, in a limited competition, to offer a premium of 1,000*l.* to the successful author of a plan for the improvement of the whole estate, which resulted in Mr. Nash's design being submitted to the Prince Regent and to Parliament, and an Act was then obtained for carrying his plan into execution. Mr. Nash was the only competitor who ventured to interfere with the aristocratic quietness of Portland-place, which, being inclosed at both ends, was not a leading thoroughfare, having only streets crossing it from east and west. This grand place was remarkable for its peaceful dignity and undisturbed character. In it few sounds were heard, except those emanating from the wheels of private carriages. During the fashionable season, after dinner, in the twilight of a fine evening, it was not unusual to see parties, slowly walking up and down, enjoying the fresh air, with no further addition to their evening costume than a round hat for gentlemen, the ladies with an immense lace veil loosely thrown over their head and shoulders. Any interference likely to convert the retirement of Portland-place into a decided thoroughfare for all kinds of traffic would, of course, meet with considerable opposition; but the Prince Regent nodded assent, and, with the aid of his powerful party, overwhelmed all attempts at investigation. On went the public street through Portland-place, in any way that Mr. Nash and his royal master thought proper to direct, regardless of the most potent arguments of those who were termed *busy meddlers*, and of all opinions and petitions, both in and out of Parliament. This Act of the Legislature was probably the most stringent, powerful, and arbitrary of any in modern times; for it was to supersede all other Acts and laws relative to buildings, streets, or public thoroughfares in any way connected with the new street.

In order to understand the cause which gave rise to the curved way between Portland-place and Regent-street, a slight sketch of the history of Langham-place and its neighbourhood may be necessary as well as interesting. William, second Duke of Portland, was married at Marylebone (commonly called Oxford) Chapel, in Vere-street, on the 11th of July, 1734, to the Lady Margaret Cavendish Harley, only child and heiress of Edward, second Earl of Oxford and Mortimer; hence the Marylebone estate, at that time nearly all fields, became the property of the Portland family. Soon afterwards, Lord Foley became a tenant on lease of a nearly square piece of ground, about two or three acres, in the middle of the estate, on which he built a detached residence, surrounded by a garden, from the designs of S. Leadbetter, the same architect who erected the chapel in Great Portland-street. There was a restrictive clause in the agreement between the Duke of Portland and Lord Foley, that no other buildings should be erected upon the same estate, to the north. It is probable this stipulation had no other object than to prevent incidental nuisances to Foley House; but when Lincoln's-Inn-fields, Red Lion-square, Queen's-square, Soho-square, and their neighbouring streets, became no longer fashionable town residences, hundreds of first-class houses rose in a few years in the parish of Marylebone. Lord Foley then saw the beauty of his situation preserved by the force of this stipulation; and the Duke of Portland felt that his contemplated improvements were checked by the same means. In due time both landlord and tenant, assisted by the valuable judgment of the celebrated architect, Robert Adam, brought their contending interests to a conclusion by making Lord Foley's house and garden freehold instead of leasehold, and building Portland-place 126 feet wide, exactly the width of the front of Foley House; thus conforming strictly to the original covenant without materially affecting the prospect from his lordship's house, or obstructing the ardour of speculation on the part of his grace.

There was nothing particularly to admire externally at Foley House; nor in the arrangement of the plan, or decoration of the rooms: it was a plain brick house, with stone dressings, consisting of a basement, ground floor, and bed-rooms above. The entrance was from Chandos-street: the ground was enclosed on the east, south, and west, by the backs of neighbouring houses; and a blank brick wall, without a door or opening of any kind, was built across Portland-place.

Mr. Nash's original plan for Regent-street was to continue Portland-place in a direct line southward, to where Hanover Chapel is situate east of Hanover-square. To attain this project, the freehold of Foley House and garden was to be sold in one lot, and, Mr. Nash being possessed of almost unbounded control, managed to become pur-

chaser of the entire property, and thereby deal out the ground in separate lots for private houses, and a large portion for the public thoroughfare Considerably beneath this intended straight street, from Portland-place, southward, before any of the old houses were pulled down, an immense sewer was constructed by tunnelling under the houses, to convey the water and sewage from Park-crescent, perhaps even from the east side of Regent's Park, through the New-street, Pall Mall, Charing Cross, into the Thames somewhere by Scotland-yard; and, it is worthy of remark, that this large sewer does not run in the crooked line of Langham-place, but straight from Portland-place to Regent-street, proving the originally intended line of thoroughfare.

As soon as possible the old house was pulled down, to make way for the public thoroughfare; and the very first applicant for a site, on which to erect a mansion and offices, was Sir James Langham, to whom the new proprietor of the Foley Estate sold a plot of the freehold, conditionally that the vendor was to be architect to the new building. These terms being settled without loss of time, Mr. Nash immediately began to erect a town residence for Sir James, the principal front being in a line with the west side of Portland-place. This building was in progress before any others on the Foley estate; even the fence-wall which separated it from Portland-place was not yet taken down. Sir James Langham's new mansion was already roofed in, when most important, extraordinary, and unwarrantable proceedings occurred, in consequence of the new structure presenting unmistakeable evidence of insecurity. At this period of the building another architect was employed to remedy the defects of construction. Mr. Nash, who had almost unlimited power, as regarded the new street, was dismissed by Sir James Langham: the former then immediately commenced altering the originally intended straight line to that of the crooked one which Langham-place now presents, and prepared to erect houses with their backs close to the principal front of Sir James's new mansion. In this dilemma the worthy baronet had no alternative but to purchase, at an enormously high price, the piece of garden-ground on which the large hotel is now being erected.

C. H. Smith.

THE SANITARY STATE OF OUR ARMY IN INDIA.

That this subject has not only been taken up by the Government, but by the Press, if not also by the public at large, cannot but be highly gratifying to us, who first urged it on the attention both of the Government and of the public. The report of the Royal Commission, of which Lord Herbert and Lord Stanley were the successive heads, fully justifies all we said on this subject, and renders it imperative on the Government to institute, both figuratively and literally speaking, the most sweeping measures for the sanitary improvement of our Indian Army. By comparison with those remediable and, in fact, quite inexcusable causes of ill health and premature mortality which cut down our men in India, the unavoidable influence of the climate is as nothing; and, in truth, it is chiefly through those inexcusable abominations of which we speak that the burning sun of India operates to the production of virulent cholera, fevers, and other fatal forms of diseases for which "the climate" is perpetually blamed. And the result is not only fearful as regards the waste of human life, but enormous as regards the cost.

It is estimated that the expense to this country, in money, by the avoidable excess of mortality among the army in India is 388,000*l.* per annum. The estimated cost of sickness amounts to 200,000*l.*, but as matters are at present every soldier in India costs us 100*l.* a year; and of those for whom we pay such a large sum there are always an average of 5,880 sick. The commissioners assign the periodical fevers and certain other forms of disease to *malaria* as the chief cause,—a cause of evil, however, which everywhere disappears before clearing, subsoil drainage, and improved agriculture; and they remark, what is well known, that "retentive soil, having imperfect natural drainage, expanses of shallow and partially dried-up water, neglected tanks, hollows filled with water, marshy ground, and damp and wet ravines, are all well-known sources of malaria in India." We very much doubt, however, whether much of what is called malaria do not simply mean foul air from filth in station barracks and towns. The commissioners further say,—"That climate alone is not the cause of the excessive waste of life amongst our soldiers in India is obvious from the fact that the mortality of the officers is less than that of the privates, and of the civilians less than that of the British officers." Sir Ronald Martin says it is 'evident that due regard has not been paid to the sanitary condition of the Indian barracks, *and that proper attention has not been paid to their surroundings.* The same gentleman also tells us, that "of all the causes which go to foster and maintain epidemics, the ill-selection of localities, the structural defects as to ventilation, drainage, cleanliness, and the personal habits of the soldiers, *are the most important questions.* There are other evils which call for remedy, if the lives of our soldiers in India are to have their natural expansion. Barrack accommodation must be improved: the well-known causes of offensive and poisonous effluvia must be removed; the great evil of overcrowding be stopped, and the means of cleanliness be provided in every case." Sir John Lawrence reports that both officers and men are very careless in these respects; and that their habits of life are inimical to health; that the habits of a cold climate are extremely pernicious in India, and soon produce bad health and an increased mortality: the men under the circumstances eat too much animal food; eating it sometimes two or three times in the day, irrespective of season or temperature. "Government," says Sir John, "should try to induce the men to use more vegetable diet in the hot weather:" besides, there are intemperance, a certain amount of immorality and want of interesting employment,—all causes which affect health: but we believe that if the barracks were thoroughly improved, those in bad situations closed, and a proper amount of cleanliness enforced, we should cease to be pained by hearing accounts of the wholesale destruction of life in our army in India.

Each month's experience,—every new inquiry made into the matter,—only shows more and more clearly and evidently the evils everywhere, and in all countries, of sanitary neglect, and the advantages of proper precautions. Miss Nightingale and her staff, aided by the health-officers sent to set the camp and hospitals in order, saved our army in the Crimea; and fifty other important instances might be given to show the sure beneficial effects of resorting to right measures. In connexion with our soldiers in India it is necessary that these measures should be promptly applied. Our opinions have been recently corroborated by very competent authorities, as at the Newcastle-upon-Tyne meeting.

On this point Dr. Bird said that he had no fear of the climate of India, if what was necessary to be done for the health of the army were accomplished. This gentleman remarked that intemperance and vice were but partial causes of the mortality. The chief causes were heat, moisture, and bad localities. In some cases where disease prevailed in the army, the greatest part of the outbreak was occasioned by the *overcrowding of the barracks*, and the *filthy cesspools* in the midst of them. Men might be acclimatized to elevated degrees of temperature, but it was impossible to acclimatize any human being to the effects of foul localities and miasmatic diseases. He decidedly objected to the view by Colonel Sykes, that vice and intemperance were the main causes of disease in the army in India; and maintained that the mortality chiefly arose from filthy localities and unsuitable and ill-ventilated barracks. Good barracks could not, however, alone secure good health, unless all other accessories were attended to in the same way.

Dr. Hunt was also of opinion that the excessive deaths were not to be attributed to intemperance and immorality. He thought that good might be done by selecting localities more suitable to a warm climate.

Colonel Sykes does not seem to have discussed the sanitary part of this question. He stated that where great heat and moisture were combined, there resulted the greatest injury to health; and this circumstance shows the need there is of choosing dry localities as resting-places for our troops; for, without taking the loss of life and health into consideration, the money-waste caused by the destruction of these trained soldiers is enormous.

A most careful examination of the Indian barracks should be made: we ought to know the difference of the death-rate in different localities; and this ought to be considered in relation to the sanitary state of the places as to drainage and cleansing, water-supply, and so on. It would also be worth while to consider what dresses could be provided for the men suited for the climate.

It has often been a matter of surprise and regret that several of our army-leaders are not sufficiently acquainted with, or are neglectful of those sanitary laws which so materially affect health. There does not appear to be any reason why this useful knowledge should not be combined with military duties. The army surgeons could often effect a great deal of good in this way, but they do not like to interfere: nor would they, in some instances, be listened to if they did. In the hot Indian sunshine all pollated matters should be quickly and effectually removed from camps and barracks. In the stations there is needed not only extensive ventilation, but a shade from the heat, and every care should be taken of the purity of the water-supply, and of the drainage of all stagnant pools and other similar places. We have recently met with some soldiers who have returned from India, in sorely shattered health, and who complain of the lack of intellectual amusement to employ the many hours of leisure: there can be no doubt that this long and forced idleness is a cause of mischief.

We have alluded to the state of the drainage and water supply, cleansing, &c., in India; but what will our readers think when we assure them that drainage by sewers, and water supply by pipes, and often even cleansing by any process, appear to be among the sanitary improvements which can scarcely be said to exist at all in India as yet; and that many places are in a far worse state as to sanitary matters than they used to be in this country in our very worst towns before there was any sanitary agitation at all.

Miss Nightingale was lately applied to by the Royal Commissioners for comments on the "Stational Returns" from barracks, hospitals, and towns in India, which were laid before her for that purpose. These returns Miss Nightingale has carefully dissected, and her report upon them has been reprinted from the report of the Royal Commission, to which it formed an appendix.*

Such a task, we are perfectly certain, never before fell to the lot of a lady to perform; and the ministering spirit of the Crimea alone could be expected to perform it. The result was, as the publisher has well said, that—

"Those who have Miss Nightingale's other volumes will thus be able to add to them a book which is second to none of them in charm of style, and will promote the reform of the sanitary condition of the British army, as well as conduce to the well-being of the natives of India."

In the outset of her report, or observations, Miss Nightingale says:—

"If there be a single station in India with a good system of drainage, water supply, and cleansing for itself and its bazaars, with properly planned and constructed barracks and hospitals, provided with what is necessary for occupation and health—a station where the men are not encouraged to drink, and where they are provided with rational means for employing their time—to such a station these remarks do not apply. *But I have not found it.* Everywhere there are grievous sanitary defects, which, wherever they exist, can lead only to sickness and loss of life to the degree in which they exist. And let those who doubt whether this representation is true, taken as a whole, look at the stational reports for themselves. In the papers sent me I find an amount of evidence showing the causes of disease in the Indian army, such as perhaps was never before brought together on any similar subject."

Yes, and such evidence! such a wading through all sorts of filth and some sorts of vermin,—"bad water, bad drainage, filthy bazaars, want of ventilation, surface overcrowding in barrack huts and sick wards."

As to the water, it often swarms with animal life, as at Hyderabad [surely Hydra-bad must be the right spelling?] and a composition which "reads like a very intricate prescription, containing nearly all the chlorides, sulphates, nitrates, and carbonates in the pharmacopœia, besides silica and large quantities of organic matter—animal and vegetable,—which the reports apparently suppose to be nutritive [as well as remedial], for few of them but 'consider' the water 'good' and 'wholesome.'" Miss Nightingale gives amusing illustrations of the "beginning" and the "end" of the "water-pipe" of India, in the shape of two "bheesties," one loading himself with his water-skin, and the other emptying it into a water-jar.

As for the bad drainage,—

"This may be rendered no drainage whatever, in any sense in which we understand drainage. The reports speak of cesspits as if they were dressing rooms. At Nusseerabad and Kolapore, 'a small cesspit is attached to each bathing-room, urinal, or privy,' and 'to each married man's quarter there is a bathing-room with cesspit.'

At the capital of the Bombay Presidency, where civilization has introduced a 'main drain' 2 feet square, with a flat 'bottom,' this 'main drain' is a 'great nuisance,' and the 'stench at times scarcely to be endured.' At Fort George, in Bombay, the 'latrines are not drained except into an open ditch, which is always in a foul state.'

* "Observations on the Evidence contained in the Stational Reports submitted to her by the Royal Commission on the Sanitary State of the Army in India." By Florence Nightingale. London: E. Stanford, 6, Charing-cross. 1863.

Indeed, Bombay would gladly say, as the London woman said when asked to point out the drains, in the days when London drainage was in a similar state, 'No, thank God, sir, we have none of them foul stinking things here.' * * * * * * * * *

Everywhere the system of 'drainage' is that 'cesspits' are 'emptied' when 'filled' or 'when necessary,' and their contents carried away by hand."

The Indian drainage system is graphically represented by a night-pail carried across a bamboo by two Indians,—"bheesties," too, we suppose.

"It is impossible" (adds the reporter after her observations on the water supply and drainage) "to pursue this subject further. There are so much worse things in the Stational Reports than what I have chosen to give, that I must say to those who call my 'bonnet ugly,' 'There are much uglier bonnets to be had.'

The system of water supply and drainage in India may be briefly defined as follows: they draw water from a well, not knowing whence it comes, and if there be any means to drain off water it is into a cesspit, or into long, pervious drains, not knowing whither it goes. When this is not done, all the fluid refuse is collected into open cesspits, and carried away by hand-labour or carts. Or else it is allowed to dispose of itself in the air or earth as best it can.

Drainage, in the sense in which we have found it necessary for health in this colder climate, is by no means considered necessary for health in the hot climate of India; for, as in the case of the water supply, most of the reporters consider *no drainage* a sufficient guarantee for health."

The filthy bazaars, Miss Nightingale remarks, it is almost impossible to describe,—they are simply in the first savage stage of social savage life,—except where the two Lawrences have left their more civilized traces.

Ventilation, like all else, is in a primitive state:—

"Generally, very little attention appears to have been paid to independent ventilation as a cardinal point of barrack construction. Doors and windows have been trusted to; yet they are so placed that men are often exposed in bed to hurtful draughts, and if shut, the fresh air is also shut out. Sometimes there is no glass in the windows, and when these are shut there is darkness as well as foul air.

A knowledge of the proper application of sanitary appliances to building in India appears to be as yet in its infancy."

So with regard to the population of the barracks:—

"The men are far too crowded in their Indian barracks. In almost every case there are too many men in the rooms for health. The floors in most barracks are merely the ground bricked over, or they are of stone or of a kind of plaster.

At some stations the floors are of earth, varnished over periodically with *cow-dung*! a practice borrowed from the natives. Like Mahomet and the mountain, if men won't go to the dunghill, the dunghill, it appears, comes to them.

To sum up: it is not economical for Government to make soldiers as uncivilized as possible. Nature sends in her bill—a bill which has always to be paid—and at a pretty high rate of interest too."

One of the station reporters talks of the accommodation of 300 men per room as being "without inconvenient overcrowding." Miss Nightingale asks "what is convenient overcrowding?" and however difficult it may be to give a satisfactory reply, we fear there *is* a vast deal of "convenient overcrowding" in our Indian barracks.

The description given of the state of native towns in the reports submitted to Miss Nightingale she describes in one word as "astonishing."

"Can it be possible," she says, "that such a state of things exists after all these years of possession and unlimited authority?

So far as one can judge from the evidence, the sanitary state of entire large cities is as bad as, if not much worse than, was the state of the worst parts of our worst towns before there was any sanitary knowledge in the modern world at all."

Intemperance, excess of food, want of occupation and exercise, the plans and condition of hospitals, the hill stations, and various other subjects, are brought under review in Miss Nightingale's valuable contribution to the sanitary history of our Indian army; and we believe that nothing that has till now been written on the subject will so thoroughly rouse the public attention to this important subject as her "Observations on the Sanitary State of the Army in India."

THE SANITARY IMPROVEMENT OF OUR TOWNS.

Carlisle and Cockermouth.—A very influential meeting has been held in the Court-house, Cockermouth, to hear an address from Dr. Elliot, of Carlisle, on the subject of sanitary reform, and to consider as to the adoption of the local Government Act. Although only a few hours' notice of meeting had been given, yet at the time announced for its commencement the building was crowded, a proof of the interest taken in this important question by the people of Cockermouth. Dr. Elliot, in course of his address, alluded to what had been done at Carlisle. The sanitary reformers had had their little battles to fight in Carlisle, he remarked; and when the subject was first mooted they were resisted tooth and nail. They had to enlighten the inhabitants upon a subject which they knew little about. He had five or six plans of the city drawn upon tracing paper. He gave one to the overseers, requesting them to mark in Indian ink upon the plan, the places where the greatest amount of money was expended, and where an extra amount was expended to mark the place or places doubly black. He gave one to the police, and requested them to adopt the same rule with reference to those places which gave them the most trouble. He gave one to the Dispensary, and requested that the places where the Dispensary doctors gave the most medicine to those who could not afford to pay for it, might be marked upon the map; and by this means he got hold of the fever list. He gave another to the city surveyor, and told him to paint in with Indian ink the low levels of the city. He received them all back; and, when they were suspended in the Athenæum, where they held their meetings, the audience was singularly struck by the marvellous identity of the four maps. The places were marked exactly alike in each: in fact, they all seemed the work of one hand. These facts proved that, where dirt prevailed, vice and crime prevailed as a natural consequence. In Carlisle they had an experience of twelve or thirteen years of the working of the Health Act. They could speak practically now: they had a right to do it; and he would recommend the sanitary reformers of Cockermouth to send a deputation to Carlisle for the purpose of ascertaining whether or not the working classes of that city had derived any benefit from waterworks, sewerage, and the Board of Health. He pledged himself that the answer would prove satisfactory. The question, from a medical point of view, was an important one to the working men, their wives, and children. For the preservation of good health it was necessary that the blood should be pure; but what chance had the blood of being purified when the air taken into the lungs was impure and polluted? He could remember the time when typhus fever prevailed in the best streets in Carlisle to such an extent that, previously to the removal of a patient to the fever hospital, which contained fifty beds, care had to be taken that there was a vacant bed. It was a common case then for the fever hospital to be full, but it had not been half nor a quarter full since the application of the Sanitary Act. This Act had not only knocked down fever, it had almost destroyed it. He had that day visited the hospital, and there was only one case in it, and that was not a case of fever, but of diphtheria. He called earnestly upon the community of Cockermouth, especially the working classes, to assist in the work. Amongst all the great and good works of the present day it would be difficult to find a nobler one than sanitary reform. It was unanimously resolved, at the close of Dr. Elliot's address, that the local Government Act ought to be applied to the town.

Bacup.—At a great and crowded meeting of the ratepayers of Bacup, to consider as to the adoption of the local Government Act, an energetic address in favour of the object in view was delivered by Mr. Rawlinson, and the result was that a resolution to adopt the Act was carried by a considerable majority.

Kidderminster.—At a recent meeting of the town-council, the sanitary state of the town was brought under notice by the following communication from the clerk to the board of guardians. "The Mill-street and Bales-hill nuisance, reported a month ago, still remains unattended to, as also several others. The river and drains generally are in a very foul state. Nuisances daily occur to us in our visits, but it is useless reporting them unless some person has the power to compel their removal. There is a great outbreak of fever of a violent type in the town, and every measure should be exerted to prevent accumulation of filth, even in small quantities. Diarrhœa also is very prevalent, and this of a type evidently attributable to the foul air generated in the various localities in which these sufferers resided." The communication was accompanied by an urgent request that the council should take immediate steps to abate the nuisance complained of. The town-clerk was requested to assure the board of guardians that they would spare no pains in exercising the powers vested in them for the removal of nuisances.

Tamworth.—A meeting has been held in the Townhall to consider whether any and what steps can be taken to amend the defective drainage, and otherwise promote the general health and welfare of the town. The mayor presided. The following resolutions were, after some discussion, adopted:—"That a committee be appointed to consider and report as to the necessity of draining the town, or particular parts of it, and the best means of doing it, and that they be sanctioned to consult at their discretion a competent surveyor;" and "that this meeting is ready to adopt such Act of Parliament as is requisite for carrying out the objects contemplated, and is in accordance with the views of the committee; and that the mayor be requested to call a public meeting, as before, as soon as the committee certify him that they are ready to present their report."

EXCAVATION OF THE TEMPLE AT BASSÆ.

THE LATE MR. COCKERELL, R.A.

Professor Donaldson writes to us as follows:—

"In your interesting memoir of our late lamented friend C. R. Cockerell, Esq., there is one statement, in which my name is mentioned, and which I hasten in justice to him to correct, as it contains a slight inaccuracy. It says that, during Mr. Cockerell's absence in Sicily, I was with the party of German artists who excavated the ruins at Bassæ, and the first account of which I published in the supplementary volume of Stuart's 'Athens.' The fact is, that Mr. Cockerell did himself, then and there, with his able companions, ascertain all the details of the temple, published in his last great work of 1860. I did not visit the ruins of Bassæ till the year 1820, with my fellow-travellers W. Jenkins and J. L. Wolfe, some years after the investigations of Mr. Cockerell and his German friends, and when all was clear and in order, and every part appreciable. When I returned home, and Mr. Weale applied to me for materials for his contemplated supplementary volume to Stuart's 'Athens,' I went to Mr. Cockerell, and asked him if he had any intention of publishing the Temple shortly—and I told him of Weale's application to me. He replied, that he could not tell how long it would occupy him, but that he did not think he should be able to complete it for a very considerable period; and he said he left it quite at my own discretion to do as I liked. I therefore accepted Mr. Weale's proposition. I was intimately acquainted with Messrs. Link and Stackelberg, at Rome, two of Mr. Cockerell's colleagues and friends, and at Rome furnished the latter with the plan published in his work on the sculptures. The other colleague, the Baron Haller, architect, and who was at Athens, under the special sanction of the King of Bavaria (grandfather of the present king), at the time of Mr. Cockerell's arrival there, was a man of great knowledge, perfect master of his art, and thoroughly acquainted with Greek antiquities. He attached himself to his young English friend; and to his profound experience Mr. C. was much indebted for his thorough acquaintance with Greek art; as at that time the professional education of the architect was at a low ebb in England.

Mr. Cockerell erected a Norman chapel for Sir Thos. D. Acland, at his seat, Killerton, Devon; and I believe a Gothic church at Athens, for the English Protestants there.

The idea of the pedimental arrangement of the Niobe group at Florence was suggested by the Chevalier Bartholdy, and worked out by Mr. Cockerell, as stated in Mr. C.'s etching, published in 1861, a copy of which, presented by him to me, is in my possession, and having his own autograph."

METROPOLITAN BOARD OF WORKS.

TENDERS FOR THE NORTHERN EMBANKMENT OF THE RIVER THAMES.

The Board met on Friday, the 25th, for the first time since the vacation; Mr. Thwaites in the chair. The following tenders for the embankment of the Thames on the north side were read:—

Wythe	£683,000 0 0
Lavers	649,669 0 0
M'Cormack & Son	633,727 0 0
Ayres & Son	617,000 0 0
Brassey & Co.	583,000 0 0
Ritson & Co.	536,827 0 0
Pearson	534,248 0 0
Myers & Son	533,000 0 0
Lee & Son	525,000 0 0
Furness	520,000 0 0
Moxon & Co.	510,076 0 0
Baker	495,500 0 0
Ridley	495,000 0 0

The tender of Mr. Samuel Ridley was accepted, subject to the usual inquiries.

PARK CHAPEL AND SCHOOLS, CROUCH END, HORNSEY.

PARK CHAPEL AND SCHOOLS, CROUCH END, HORNSEY.

This chapel was erected some years since under the superintendence of Mr. Joseph James; but latterly the chapel has been enlarged, and the new lecture and school room (now open) erected, under the superintendence of Messrs. Lander & Bedells.

In order not to impair the general effect of the whole by these additions, an octagonal roof has been adopted, culminating in a central turret, as seen in the view we now give.

The lecture-room (originally about 32 feet long and 19 feet wide, accommodating about 120 persons), and a small and inconvenient minister's vestry, have given place to a lecture-room, 42 feet by 42 feet, which will accommodate about 350 persons, and is for the most part 24 feet high. To avoid draughts, an internal lobby and swing folding-doors, in addition to a projecting porch, with its external and internal doors, have been provided. Ventilation has been arranged by shafts in the walls, casements in the upper windows, and the large central louvred turret already referred to. Further particulars, already given, will be found on p. 607, *ante*; but we may here add that the materials used externally are Bath stone, Kentish rag, and slates; that the total outlay is 950*l.* to 1,000*l.*; and that the builders were Messrs. Hill & Sons.

CHALMERS'S HOSPITAL, EDINBURGH.

The new hospital in Lauriston, Edinburgh, is now nearly completed. It is nearly thirty years since Mr. Chalmers, a plumber in Edinburgh, left a fortune of about 30,000*l.* to the Faculty of Advocates, as his trustees, for the purpose of erecting an hospital for the "sick and hurt." The money was allowed to accumulate till it reached the sum of 70,000*l.*, or thereby, sufficient to build and endow an hospital such as the testator wished to found. Ten years ago, the trustees acquired the property of Lauriston House, and the large field behind it, extending down to the Meadows. The ground covered a space of eight acres, and as this was a good deal more than was required for the hospital, the trustees formed the street, now called Chalmers-street, which is in course of being feued for self-contained dwelling-houses. They reserved for the hospital itself its necessary offices, and airing grounds about two acres; and in May, 1861, the erection of the building was begun from the plans of Messrs. Peddie & Kinnear. The accommodation was restricted to forty-eight beds.

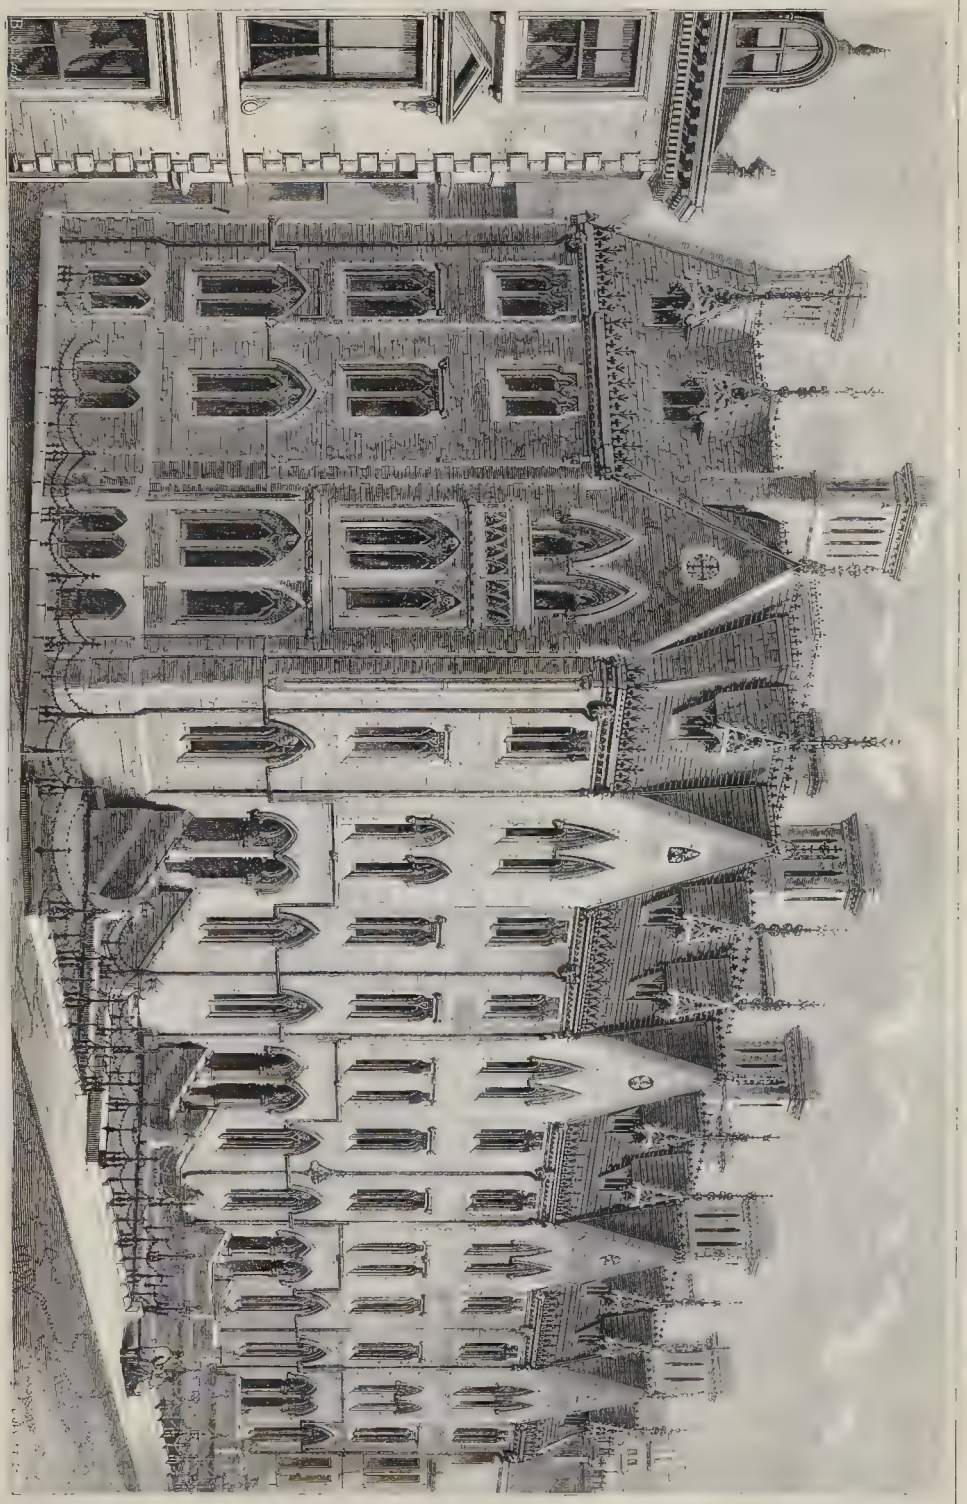
The building is composed of three portions—a central block, with accommodation for the medical staff and domestic attendants, and two wings for the patients. The central part of the building comprises four stories, one of them partially sunk. The wings are only two stories in height; but there is a large open space below the lowest floor, with a free current of air through it, so as to secure the utmost possible dryness in the wards. The architecture of the building may be described as Italian, very freely treated. The entrance-door is in the middle of the central portion, ornamented with architraves, trusses, and cornices; and on each side there are windows supplied with architraves, chamfered on the inner margin. The six windows of the two upper floors are treated together, one above the other, as if they belonged to one story. The whole exterior is of polished ashlar work, so as to secure it externally from any impurity which might attach to it. Internally the same care is taken to effect the same object. The wards for patients are in the wings, one wing being reserved for male and one for female patients. Each ward occupies the whole breadth of the building, and is lighted by windows from both sides. The portion of the side wings immediately adjoining the central building is occupied by a large open staircase. Each floor of each wing beyond the staircase is occupied by a single ward, 54 feet long, 25 feet wide, and 16 feet high, having a fire-place and a range of five windows on each side; the windows being so arranged that a single bed occupies the space between each pair of windows. The floors are of polished oak; and for the sake of warmth the windows are all supplied with plate-glass. The skirtings, &c., are all of Parian cement, and the only wood fittings are the doors and window sashes. Each ward accomodates twelve beds, and has its own bath-room, water-closet, &c. The contractors are,—for the mason's work, Messrs. W. & D. M'Gregor; for the wright's work, Messrs. J. & R. Wilson, Leith; for the plasterer's work, Messrs. J. Craigie & Sons; for the plumber's work, Mr. J. Low; for the slater's work, Messrs. J. Young & Co. Mr. Parnell has the cooking and heating apparatus in preparation; and Mr. Moxon is doing the painting. The clerk of works is Mr. J. B. M'Fadzean. The cost of the whole building, including the laying out of the grounds, and other expenses, will be little over 7,000*l.*

The Reading School of Art.—This school has been re-established, with a new committee, under the presidency of the Mayor, and the number of pupils already under instruction is about 800. The head master is Mr. C. R. Havell.

HOUSES IN NOTTINGHAM.

STREET ARCHITECTURE IN THE PROVINCES.

These houses, eight in number, form a group known as "Terrace Royal," which fact is duly signified to the public by a carved ribbon bearing that name upon it, while above the ribbon appear the Prince of Wales's feathers and motto, and below, the date, 18th March, 1863, being the date of the Prince's marriage, and also the date of the completion of the whole block of buildings. They are constructed of brick (pointed with dark-blue mortar), and stone dressings of the cream-tinted oolite from the Ancaster quarries. The style chosen is the Decorated Gothic. The roof is constructed upon the Mansard principle, and contains two bed-rooms for each house, the water being conducted into eaves spouting, crested with wrought-iron ornamental work. The dormer windows,—an ornamental feature,—are of wood, with the exception of the finial terminals, which are of iron. Stone gargoyles conduct the water from the eaves into the down spout.



The carving has been executed by Mr. Smith, of Nottingham, late of Oxford, and is very satisfactory. The window-heads on the ground-floor are filled with carved spandrels and quatrefoils, each quatrefoil being occupied by a sculptured head. Thus, in Clarendon-street, busts of the Earl of Clarendon, Queen Elizabeth, Edward VI., Queen Anne, &c., appear; while, in Shakspeare-street, sculpture suggestive of the departed bard occupies the windows,—as, for example, the heads of King Lear, Cordelia, and so on.

The upper windows are enriched with carved foliage of various forms, and the hood-moulds are terminated with the heads of various animals and groups of birds. Discharging arches of the blue Cropwill stone relieve the bright colour of the white stone.

On the Shakspeare-street frontage the bay window of two stories is the most striking feature, the upper story of the bay being made to recede, giving a very light effect to the group. The sculpture comprises busts of the Queen, the late Prince Consort, the Prince of Wales, the Princess of Prussia, the Princess Alice, &c.; while, above an adjoining window, a likeness of the Princess Alexandra is carved.

The garden plots in front of the houses are inclosed by cast-iron standards and wrought-iron chain work of an ornamental character.

These buildings, which form a conspicuous portion of what may be termed New Nottingham, have been erected after designs by Mr. Wilson and Mr. S. Dutton Walker, architects, of that town.

THE "TERRACE ROYAL," NOTTINGHAM.—Mr. Wilson and Mr. S. Dutton Walker, Architects.

ART AND HEALTH AT THE RECENT GHENT CONGRESS.

In the section of "Art and Literature," the following question was proposed by M. Ulback:—"Has material progress been injurious to thought and feeling in the arts?"

M. Eugène Dognée said the question was as interesting to refined and philosophical minds as it was to practical men. What, he said, was now wanted, was a search after the beautiful and useful; and it was important to combat, as far as possible, the vulgar results produced as much by a desire of a good market as by the abolition of corporations. M. Dognée suggested the following plans for instilling artistic ideas into workmen;—That the principles of artistic teaching, aided by museums carefully selected, should be carried out in all primary schools; that central industral schools of art should be established, with necessary models, specializing the arts indicated previously by the nature of the soil, the productions of local industry, or of ancient tradition still extant; that in associations for the encouragement of art, room should be appropriated for industrial artists by the side of artists. He clearly showed the benefits which would arise from artistic teaching, and what material advantages could be added to our luxuries by the search after noble and refined enjoyments.

M. Alexandre Weill submitted the examination of the following question to the meeting:—Is it necessary that a man's life should be on a par with his works, even if he be a man of genius, to enable him to exercise a salutary influence on his age? He affirmed that contemporary literature, and its masters especially, were responsible for the debasement, the disorder, and uncertainty of our times.

M. Ulbach said, that men of genius were humanity itself, with its troubles, its anguish, its revolts, its doubts expressed in attractive and immortal words. If their ideas were only submitted, with sincerity and talent, they could have no bad influence on our consciences.

Mdlle. Royer and M. Foucher de Careill both asked for men of genius a calm appreciation, and gratitude for the benefits they conferred. They asserted that if a man possessed one talent, he ought not to be expected to have all; nor ought he to be condemned if his life were not as perfect as his writings.

M. Weill persisted in asserting that great men who led a life of evil were the intellectual malefactors of their age. He passed in review many well-known and admired names. He was particularly severe on the works of the present age, and concluded by saying, that if they seemed to him to be confused and wanting in morality, it was because their authors were guided by no fixed rules, no solid and absolute principles.

On the question,—"Has material progress been injurious to thought or feeling in art?" one orator only, Mr. Urlin, replied, and maintained that material advancement must necessarily be in harmony with intellectual advancement. Almost every example, he said, proved that men who laboured the most usefully at material progress, were also those whose intellectual aspirations were of the highest order. Why then, he inquired, separate the real from the ideal? Is there not in the telegraph a sympathetic feeling which conveys our hopes and fears to the farthest extremities of the globe? These are the discoveries in material order which have aided the development of our ideas. It was by the invention of printing that the riches of the mind, formerly hidden away in a few manuscripts, have become the patrimony of all humanity, and have been made free to millions of understandings. Material and intellectual progress are the two great wheels turning the steam-vessel which bears us towards that goal at which humanity ought to unite.

The last question examined by the Assembly was one by M. Pascal Duprat;—"Should art in its various manifestations be a mental pleasure or an instruction?" He passed in review some of the most beautiful works in art and literature; proving, for example, from the lovely songs of the Eneid, from the monuments of architecture and Hôtels de Ville in the city, that artists and writers have been especially great when they have divined the popular idea, and at the same time expressed the nobility of their age and country.

This section entered into the examination of the following question;—"On the influence of administrative centralisation upon the development of art and literature." MM. Foucher de Careill, Pelletan, and Dognée considered centralisation to be specially fatal and dangerous. M. Foucher de Careill also sought to prove from the examples of Athens and Florence that great artists have always developed themselves to more advantage where the hand of Government neither fettered nor directed their actions.

M. Pelletan opposed administrative centralisation in art, as it introduced bureaucracy, school prejudices, routines, and the exigencies of authority. The freedom of art was injured by excessive Government interference, as well as the liberty of the artist, whose conscience was menaced by favours, those state premiums which extinguish free inspiration instead of giving birth to it.

M. Wagener supported the idea that individual efforts did not suffice for the encouragement of science and art. He cited, also, the great artistic movements of Athens, Florence, and Rome, and showed that in them could be traced the fruitful intervention of a powerful centralisation. In his opinion, the communes, to whom, it had been suggested, the right of interference with, and encouragement of, art, ought to be intrusted, was restricted in its influence: it was a centralisation, a state. If a commune were allowed the privilege, surely so ought that great commune, the Government, which is the nation, be permitted to assist in giving birth to those great compositions which individuals would not be able to command, and which are so invaluable for the instruction of the people.

In the section Benevolence and Public Health, the following question was selected for discussion:—

1. How ought sanitary measures of relief in the country to be organised?

A great number of orators were unanimous in their opinion that the organization of relief was necessary, with the exception of M. Burggraeve. There were nearly as many orators as there were systems. One thought it necessary to establish dispensaries; another thought the plan of domiciliary visits better; a third that emoluments ought to be fixed by law;—it was but right that the man entrusted with the physical health of the community should be remunerated, as well as he who was entrusted with their moral health; a fourth demanded cantonal doctors; a fifth thought medical instruction diffused among the country people would be enough. All agreed, however, in the need for the organisation, and seemed convinced of its efficacy.

The section examined the question,—What improvements have taken place in working men's dwellings during the past year, and in what manner can those improvements be propagated?

M. Kayser, after describing the present miserable dwellings of many of the poor, said he thought it was incumbent on the Government to modify this state of things by aiding in every way possible those who sought the solution of the problem,—How to lodge a workman suitably, and at a moderate cost. He thought it might possibly stimulate capitalists to action.

M. Jacquemyns considered that kind of encouragement would not take effect. What caused the high price of dwellings was, that the proprietor not only saw that his property was uncared for by those who dwelt in it, but that it was also often much injured by them; and to obtain compensation he exacted a high rent. It was, then, the workman himself who must have developed in him a sufficient love of order and justice to teach him that payment of his rent was a sacred thing. This end obtained, and proprietors, assured of the safety of their property and that their rent would be paid, would become more tractable. He advised the plan adopted at Ghent to be everywhere carried out; viz., to inspect the dwellings of the workmen. Since these inspections have been in force, the proprietors, seeing that their property was kept in better condition, have constructed new houses; and now the workman has a much better house, and for the same price he formerly paid for the dilapidated one.

M. Van Waes did not want working men's cities. It was, in his opinion, a bad plan. For many reasons workmen ought not to be separated from the other citizens.

M. Ecrevisse proposed, as a remedy to the present state of things, that societies should be established for the advancement of capital to workmen for the construction of working men's dwellings.

M. Favre said he had well studied the example of the working population of Paris and Mulhouse, and he found that, above all, it was necessary for the well-being of the workmen that a *consensus* be obtained; that is to say, that he accepts and acquiesces. Once engaged in social progress, the workman is brought to an intimate progression with its organisation, which increases his susceptibility to receive impressions from the unfavourable surroundings to which he would remain subjected.

M. Burggraeve spoke very feelingly on the subject, as Ghent still contains many horrible little hovels, without air and light, where epidemics make frightful havoc. What was desirable in Ghent was desirable elsewhere, and he advised demolition *en masse*.

M. Dumont closed the debate by insisting upon the necessity of the working-men's dwellings being better ventilated.

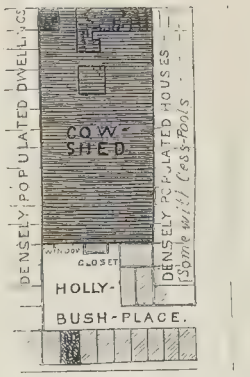
We have pleasure in drawing attention to the circumstance that the *Social Science Review* gives, in a number devoted to the subject, a report of all the proceedings during the week.

What the Church party of Ghent think of these philanthropic inquiries is shown by the following announcement in the *Bien Public* of that city:—

"A solemn mass will be celebrated in the Church of Saint-Jacques, on the 23rd and two following days, at seven in the morning, as an act of reparation for the blasphemy and impiety attending the sittings of the Congress of Social Science which has just been held at Ghent. The holy sacrifice will be offered in order to appease the Divine anger, and obtain the mercy of God for the inhabitants, so that they may preserve the precious deposit of the faith!!"

THE STATE OF BETHNAL GREEN.

Each month's painful experience shows the absolute necessity which exists for the better regulation of houses let to numerous tenants, and we are firmly of opinion that the extent and danger of this monster evil are not sufficiently known to those whose duty it is by wholesome laws to protect the lives and health of the poorer classes of the population. We could repeat hundreds of instances in addition to those which have been put before our readers again and again; but just now will particularly refer to a case that illustrates, in a remarkable manner, the ill effects of improper sanitary provisions in the houses which are crowded by many thousands of men, women, and children of the working and poorer classes, and which has already attracted much attention.



In No. 10, Hollybush-place, Bethnal-green, a little girl, twelve months old, died of low fever, and three other children in the same family were ill of a similar complaint; and of these cases, without removal to better air, one at least is likely to prove fatal. Respecting these cases, Mr. E. Moore, M.D., says, that all the children were suffering from a low state of debility: there was no specific disease, although the blood appeared to be poisoned. "I told the parents that medicine was of no use unless they were taken away, as they were suffering from impurity of the air. I attended Mr. Mandrill's two children, who died also; and Mr. Butterfield's child, who also died. These deaths took place in houses in the same court: they died in the same way as the child at No. 10." Dr. Moore made a post-mortem examination in the last case, and found the brain healthy, *but the blood liquid* and tarry: the lungs were healthy, but gorged with dark liquid blood; the heart healthy, but the blood in a semi-putrid state: the stomach was healthy, and contained milk; and the liver, intestines, and kidneys all healthy. "The child," says Dr. Moore, "was well nourished, and one of the finest children of her age I have ever seen. There were no marks of ill usage on the body." Here, in fact, in connexion with this child, are all the elements of a life which with fair play might have been prolonged to the three score years and ten of man's days; but, as it has happened, this life has been cut short. As the medical authority found that one of the finest children he had ever seen was killed by the inhalation of impure atmosphere, most likely from hydro-sulphate of ammonia, a coroner's inquest was held, and the jury returned the following special verdict:—"that the deceased came to her death by blood poisoning, caused by the impure state of the atmosphere; and the jury are of opinion that the sanitary inspector has been guilty of great neglect of duty in not seeing to the court sooner; and request the coroner to write to the parish authorities to that effect."

Our readers, from our own early and from subsequent reports, know something of the extent of the great poverty which prevails in this and other districts of the East part of London;—how helpless, for the chief part, the people are; and how sadly they are overcrowded in houses which, like those in Hollybush-place, are, in the state in which they have for years been allowed to remain, a source of sickness and death. Still, year after year goes by, and the necessary means of inspecting tenemented dwellings are not given. Last year, this most important matter was brought before the notice of the Social

Science Congress in the London Guildhall; and it is hoped that the subject will not be lost sight of at Edinburgh. At any rate, we should have a parliamentary inquiry into the condition of the London poor and the present state of their dwellings, and have recorded the experience of men like inspectors Price and Hunt, of the sanitary police, the most intelligent of the district surgeons, Scripture readers, and other persons of intelligence who have been accustomed to visit in poor neighbourhoods; for, we believe that the extent of the evil to which we refer is understood neither by the Government nor by any of the members of the Legislature. Take, for instance, the numerous army of labourers who present themselves morning after morning at the docks, in hope of meeting with casual employment. At the London Docks alone, it is said that seldom less than 4,000 men offer themselves each day for work; but barely 1,000 of these obtain anything like steady employment; and then the full extent of their earnings is not more than 10s. or 12s. a week: the remaining 3,000 may remain several days, at times for a week or more together, without having the opportunity of earning a shilling. But the names are all placed on a list in the order that they have been in attendance; and in case several ships should come into dock and require discharge of cargo, there is occasionally a demand for all the labour that can be obtained; and in case any one is not in the way to answer to his name in the order in which it stands upon the list—and this often obliges them to stand idle at their post—he is passed over. We have good authority for stating that the earnings of the large majority of these men are not on the average so much as 6s. a week. To this subject we will refer at some other time; but would just now state that the income of many thousands in this and other parts of the metropolis is not sufficient for the proper nourishment of families, and renders it all the more necessary that every possible care should be taken to enforce as much as possible right sanitary arrangements. This is, however, a matter sadly neglected in great part of the Bethnal-green district, in which so many deaths from fever, small-pox, and similar disorders, have occurred; and we find the condition of Hollybush-place and the parts surrounding quite sufficient to account for the disastrous state of affairs. This court is reached by a narrow, dirty street, much neglected by the scavengers, and with scarcely any means of surface drainage, so that stagnant water collects and putrifies. The houses here are small, some having four little rooms, and an attic formed in the slanting roof. In eight cases out of ten each room is occupied by a separate family. At the bottom of this street a narrow opening leads to Hollybush-place, in which are twelve or thirteen houses somewhat similar to those just mentioned. Some of these are now undergoing repair, and preparations seem to have been made for improving the drainage.

No. 10, in which the girl died, is a house which has probably been standing there for not less than two centuries, as is shown by its peculiar form and the panels and stair-rails which still remain in the interior: at one time it was probably in a large garden, part of which is now covered by other dwellings. No. 10 is two stories high, with a garret above: beneath is a cellar, in which there is a 16-feet well: the water of this has not been lately used for domestic purposes, nor would it be well to do so: it is therefore hoped that this undercroft may be kept locked as it is at present. The ground-floor is divided into two apartments, which are occupied by a family of six or seven persons; and the place when we saw it was clean and comfortable-looking. Above is one large apartment, with windows at the back and front: this was also neatly kept. There were two looms (standing idle) and three beds. It seems that the couple who live here and rent the house have children; but while they occupy one bed themselves, they let the other two beds to single men! It was admitted that three young men were at times accommodated in this way; but it has been stated that there were occasionally four. Besides the indecency of such arrangements, subletting in this way to persons who are not members of the same family is illegal. There is no doubt that this practice is carried on to a considerable extent, and the police are unable to prevent it in consequence of not being able to interfere unless they have some certain information. A short flight of stairs leads to the garret in which the child died. Here was a scene of misery and neglect. The ceiling and wall-plaster were falling in all directions: in front of the fire on the floor on a few bedclothes sat one of the sick children: not far off was another: the father was at work at shoe-making. He was a sober and intelligent-looking man; but being affected with some chest disease, he was not able to work so steadily and long as he might otherwise have done: besides the machines had caused a reduction, and he declared that, one week with another, his earnings did not average 5s., out of which 1s. 6d. a week had to be paid for rent. This man said,—and we are assured from inquiry that his statement is trustworthy,—that he had not tasted a piece of butcher's meat for five months. He showed his book, in which were the regular receipts for rent. He said, "I do not owe a farthing for this. The way we manage is, before we buy bread we put away 2d. each day: this comes to 14d., and leaves a little to make up at the end of the week." On directing attention to the circumstance that the windows were closed, he pointed to a large shed, one end of which was a few yards off. On examination we found this occupied by *fifty* cows and three or four horses: we were told that pigs were also kept, but there were none visible at the time of our visit. The occupier of the attic said that the smell from this and from closets, dungheaps, and drains, was frightful,—particularly when the wind set from a certain quarter.

Our readers may judge from this sketch-plan, showing the position of the house, whether or not this is to be wondered at.

Some are of opinion that cowsheds, surrounded by a thick population, are wholesome. Indeed, we were told at another large establishment of this kind, situate at no great distance from it, that the atmosphere was so salubrious that medical men sent patients there for the benefit of the air. On asking for the name of one gentleman who had recommended this treatment, and calling upon him, it was not surprising to find that he repudiated the idea altogether. The interior of the cowshed near Hollybush-place forms a curious scene. In long perspectives the cows stand side by side, very close together. In one part is the tank for the reception of the various kinds of refuse, with a place for the storing of grains. It is supposed that the dung-heap is cleared every day; but this seems not to be so thoroughly done as is necessary, and very bad smells arise from the grains if they are allowed to get stale. Upon the whole there seems to be a desire on the part of the proprietor to keep the animals in as clean and good a condition as is possible, and the water supply seems excellent; but there were three large untrapped gully-holes, which must be bad for the cows as well as for human beings. It is a singular fact which we have before noticed, that those who have in their premises a sanitary deficiency, complain of something which they consider worse in a neighbour's place. For instance, the cowkeeper, who is much complained of by those surrounding, directed attention to the numerous cesspools which were close against his walls, and not only did damage, but were the cause of most unpleasant smells. There can be no doubt that both are a cause of mischief; and, as regards the cowhouses in London, we have always found that, although every precaution be used, there are complaints for some distance around, particularly in the summer time; and we feel certain that these, when accompanied by overcrowding and bad drainage, cause a considerable amount of fever and disease of this class. We have found the same to be the case in St. Pancras, Islington, and other districts; and it would be useful to strike a circle round some of these places, which are thickly populated, and from the medical attendants' and registrars' reports obtain a statement of the general amount of sickness and death, so as to compare this with other localities where there are no cowhouses, but which are situate in a similar manner as regards population, drainage, and so on.

To return to Hollybush-place. Dr. Moore says, that in house after house to which he is called in this neighbourhood he finds exactly the same state of things; that within five weeks he had attended five cases of low fever, or blood poisoning, all of which had proved fatal; and that when he held the unpaid office of sanitary inspector three years ago, the parish complained, and got rid of him on the ground that they could not be constantly troubled by his reports on the sanitary condition of the parish. While here, the women and children flocked out of the houses, and in much excitement complained of the noise which had been made in consequence of the child's death. One woman said, "Have I not had two children died lately of scarlet fever? Did I say anything about it?" Another, a daughter of the above: "I am in the same house, but no one heard me grumble." Others boasted of the patience with which they had borne the loss of children, considering that it was wicked to grumble at the will of God. The passion shown against the man and his wife of No. 10 was extraordinary; and we believe that these people, having more sense than those around, and so, having, with a good object, directed attention to the unfortunate case of their child, were liable to be burnt in effigy, or personally injured, by the very people who, having themselves had children destroyed by sanitary derangements, should have felt thankful to any one for endeavouring to promote a change. On asking one of these women at random the number of her children, we learnt she had had ten born: two only were living. Another had had thirteen children born, and five were living. With the fact before us of such wilful destruction of human life; with the knowledge of the ignorance and carelessness which exist; considering the condition of the thousands of houses in which too many are obliged to make their homes; who can say that there is no necessity for police interference* with the tenement-dwellings, as well as with the lodging houses? The necessity is even greater; for in the lodging-houses the majority of the inmates are people who have arrived at years of discretion; whereas, in the tenements helpless children are allowed to suffer.

The water supply of Hollybush-place is of the imperfect kind often met with in similar situations. There are no cisterns: there is only a small pipe, the water from which runs for about twenty minutes each day, except Sundays.

It is a pleasant contrast to come from such scenes to the palace-like building which has been raised by the munificence of Miss Coutts, in Columbia-square. Few who have not seen this can form an idea, now that the various wings are completed, of its noble aspect, and of the good effect of the spacious play-ground, in which is the clock tower, engraved not long since in the *Builder*. The open stair-cases are easy of ascent; the landings roomy; the baths and lavatories, and fittings of the apartments, excellent. The covered drying place and wash-houses, at the top of the building, are very convenient. There are here 183 distinct suites of apartments, the rents being 5s. 6d., 4s. 6d., 4s., 3s. 8d., 3s. 6d., 2s. 9d., and 2s. Here there has been no fatal spreading of fever. There were three cases of small-pox, which were slight, and which were said to have been introduced from a school close by. This did not spread beyond the apartments in which the family dwelt. We do not exactly know the rate which this institution pays per cent. for the very large expense which has been incurred. It would seem, however, that it has in this instance been rather the intention of the benevolent foundress to show an example of dwellings which might be the means of leading to an entire change, in this neglected neighbourhood, of the dwellings of the industrious and poorer classes. Still this is not exactly the thing which is needed for the class of people who live in Hollybush-place.

* It is certain that many of the parish inspectors of nuisances are too lax in their duty. Indeed, in some parishes, they would be likely to give offence to the boards by showing too much zeal. The proprietors of dilapidated property have influence; and in east London a large business is done in the purchase of the fag-ends of leases; and, during the time these have to run, getting as much money as possible from the poor people's rooms, and doing as little as possible to the property.

STATE OF THE MARBEUF CHAPEL, IN PARIS.

An esteemed correspondent, signing himself "A Traveller," writing to us on this subject, says:—

"Will you allow me to offer a few remarks on the notice in your paper relative to the Marbeuf Chapel in Paris?

The building is indeed a wretched one. At the same time it should be remembered that it was the first English chapel in Paris except the ambassador's in his own private residence. There was considerable difficulty in obtaining permission to erect any chapel; and it was necessary in those days that the building should be plain and unobtrusive. It was erected at the expense of a private individual; and the present owner derives no pecuniary advantage whatever: he merely appoints a minister.

However, the chapel and the street will soon be swept away by the improvements now in progress. Of course, a new chapel must be erected in the same quarter of the town: and you will do a great service to the Church of England in Paris by calling public attention to the contemplated changes, which involve the removal of the present building. As a new chapel must be erected, it is most desirable that it should be a suitable one.

I should not, however, have addressed you but for the following words: 'The manner in which the services have been performed here of late is not very satisfactory.' This, I think, is not just to the minister. I knew the chapel in Mr. Lovel's time, and under Bishop Spencer; and I must say that the services were never conducted with more propriety than at the present time. Besides the morning and afternoon services, there is a third at night, a short one, for the working classes; and I can only account for the severe censure in the article by supposing that the writer attended that service and mistook it for the regular one.

The Hymn Book is that of the Society for Promoting Christian Knowledge. It can scarcely, therefore, be called a private collection. It was introduced by Bishop Spencer, and has been continued by the present minister. You would, I think, have spoken in a softer tone if you had been acquainted with these circumstances. The notice is calculated to excite prejudice against the chapel and the minister."

The writer, it will be seen, corroborates all we stated touching the Marbeuf Chapel, excepting so far as regards the manner in which the service is performed; and, as he bears such strong testimony in favour of that, we should have been disposed to believe that our experience was an unfortunate exception. Since the appearance of our remarks, however, we have received from other recent travellers such strong expressions of opinion similar to our own that we are forced to let our first objections stand exactly where they were. As to the miserable ugliness of the building, and its slovenly and unbecoming appearance inside, there cannot be two opinions.

NEWS FROM SCOTLAND.

Kilmarnock.—The new corn exchange here has been opened. It is situate at the junction of London road with Green-street. It covers an area of 1,602 square yards, has a frontage to Green-street of 136 feet, and to London road of 92 feet. The lower story is rusticated. The second story has twenty-five semicircular windows, which are divided by pilasters with carved capitals and key-stones. Above the windows is a cornice, having moulded trusses and intervening wreaths. Above these again there is a balustrade with vases of stone. The tower at the angle of the building is 110 feet in height. Above its first story there is a balcony supported by ornamental carved trusses. Upon the pedestal rest eight columns with Corinthian capitals. Then follow in succession a moulded architrave, a frieze, a cornice, and parapet, the whole being surmounted by a dome covered with lead, with a finial and vane. The market is at the south-east end of the building. It is designed for the sale of butter and other farm produce. It has two entrances, both from Green-street. The main entrance to the hall is at the angle of the building. The hall is designed to accommodate 1,200 persons, the platform being capable of accommodating an additional 130. At its north end there is a gallery, which runs half way along either side. The hall is lighted both from the roof and from the east side, and one of the windows is illuminated with agricultural emblems. The building affords ample accommodation for the amalgamated Kilmarnock library, and for the Athenæum reading-room. Another room is designed for sales of property, committee meetings, &c. In the lower flat there are six shops. The building has been erected at a cost of about 5,300*l.*, exclusive of the tower, the cost of which, 600*l.* has been defrayed by private subscription. The whole exterior is in the Italian style of architecture, from a design by Mr. James Ingram, architect, Kilmarnock.

Partick (near Glasgow).—St. Mary's church, Partick, has been opened. The dimensions of the interior of the church are 66 feet by 50 feet, and it is seated for 980 persons. It consists of a nave and aisles, in the Gothic style, the roof of the nave being supported by light iron pillars, which also support the galleries. The copes underneath the galleries are moulded: those under the spring of the arches are foliated, and are picked out in colour and hatched in gold. The pillars themselves are bronzed. The gallery front is divided into panels, filled in with tracery, and the whole is stained. The lining at the back of the tracery is coloured a crimson purple, in the centre of which is a gilt star. The roof is open the whole way, and is also stained a light colour: iron tie-rods have been substituted for wooden tie-beams, painted a deep blue, with ornaments at centre, ends picked out in colour and gold. The spire is not yet commenced, but it is to be proceeded with at once, and the whole building has yet to be pointed. The building has been carried on under the superintendence of Mr. O'Donoghue, architect, Glasgow, from whose design the church has been erected. Mr. O'Donoghue has been awarded the first prize for his designs for the proposed new United Presbyterian church at Partick.

Inverness.—The chief stone of the United Presbyterian new Church, in Union-street, has now been laid. The edifice is to be in the Late Decorated style of architecture. The frontage will be to Union-street, with a breadth of 48 feet, the length being 75 feet. The entrance will be by a porch in the centre of the frontage, 10 feet wide by 18 feet in height, with a gable over this. Above is the principal window, composed of five large traceried windows; while at some distance from this, on either side, are windows of smaller dimensions. On the west side of the church there are also five windows. The tower rises from the west end of the church, and is surmounted by a lantern. The total height is 100 feet. The body of the church is 60 feet long by 38 feet wide. The seats are in three main divisions, facing the pulpit at the extreme south end, with transepts running through the church from two lobby entrances. There is a large gallery at the north end; and a few sittings are likewise situate facing the sides of the pulpit, or rather platform, with desk in the centre. The roof will be of open timber, stained and varnished. Above the platform is a circular traceried window. It is proposed to erect a small vestry at the back of the church. The architects are Messrs. Ross & Joass, and Mr. Hendry is the builder. The entire cost is at present estimated at 2,600*l.*, the tower alone costing 600*l.*

Wick.—The foundation stone of the new harbour at Wick was to be laid on the 1st inst.

PROVINCIAL NEWS.

Leicester.—The Town Council have passed a resolution to the effect that a Town-hall ought to be built, and appointing a committee to consider the subject and report.

Cambridge.—The Governors of Addenbrooke's Hospital are about to consider the question of improving the Hospital. A committee, after deliberation, had agreed to recommend the Governors to adopt one of the three following courses:—No. 1. The improved plan of Mr. Digby Wyatt, cost 9,000*l.* No. 2. A modification of Mr. Wyatt's plan, cost 7,000*l.* No. 3. The erection of a new building, cost 13,000*l.*

Witney.—The completion of a railway to Witney has been followed by the erection of a Corn Exchange on the site of the old Corn Returns Office. The building was estimated to cost 1,800*l.*, the site 500*l.* The building occupies a prominent position in the Market-place, immediately opposite the Marlborough Arms. It consists of a room for the use of farmers and dealers attending the market, 70 feet by 35½ feet; reading-room for the use of the Athenæum, 21 feet by 15 feet; lecture-room on the upper story, 39½ feet by 21 feet; and two smaller rooms, each 11 feet by 9 feet. The architect was Mr. Collier; and the builder, Mr. Bartlett.

Gloucester.—The new Cattle Market has been opened. Accommodation, says the local *Chronicle*, has been furnished for between five and six thousand head of stock. A shed, 370 feet in length, has been erected from near the London-road entrance to the Wellington Hotel, and may be used for the sale either of horses and valuable cattle, or of agricultural implements, or of both. Accommodation has been provided for about 480 horses, standings for 680 cattle (including bulls), and pens for about 3,500 sheep and 580 pigs. The entrance for pigs is near the Northgate brewery, where an inclosed space, entirely independent of the remainder of the market, has been set apart for the pig trade. At this entrance a house for the reception of the city fire-engine and fire-escape has been erected, and the entrance to the horse-fair will adjoin the engine-house. The centre is devoted to the reception of horned cattle, for which separate standings, about 30 feet in length, and convenient for auction sales, have been erected. A shed, for the convenience of persons attending in inclement weather, and a settling office, have been erected near the centre of the market; also two private offices, one for the market-keeper, and one which may be let. All the space on the south side has been devoted to the sheep fair. The entrance for cattle is opposite New Market-parade: the sheep will enter at a gate between Clarence-street and Dog-lane. The cattle and pig standings are paved with Bristol stone, and the sheep-pens with Broseley brick. The remainder of the market is laid with broken stone and gravel. The boundary from the London-road entrance to Clarence-street is a dwarf brick wall, with iron palisading, and from the entrance opposite Clarence-street to the Wellington Hotel a high brick-wall with Bath stone coping. There are two outlets in the Station-road for cattle going by rail, and large drinking-troughs have been placed at the different entrances. A covered archway has been left in the centre of the horse or implement shed, leading to the space on which the sheds formerly used for the cheese fairs stood, and which space is available for conversion into either cheese, wool, or skin markets. Mr. Griffiths, of Bridgnorth, county surveyor of Staffordshire, was the architect and designer of the market; and the work has been carried out by Messrs. Jones & Sons, of Gloucester.

Hereford.—The new bank recently erected in Broad-street, for the National Provincial Banking Company, is to be opened on the 21st inst. The work has been carried out by Mr. R. Welsh, of Hereford, the contractor. The style is Italian.

Presteign (Herefordshire).—The new market-hall and public room building, originated by a few individuals forming a limited liability company, has made a commencement. The site is in the centre of the town. The architect of the building is Mr. T. Nicholson, and the builder Mr. W. Bowers, both of Hereford.

Newtown.—The *Shrewsbury Chronicle* states that Mr. John Stephens, of the Bank, has determined to build a market-place upon his property in Severn-street, almost in the centre of the present market-place, and a few yards distant from and parallel with the Butchers'-arcade, to which it appears similar in size. It is intended to appropriate the ground or lower story to a butter, cheese, and poultry market; the upper for grain and wool.

——In speaking of the building trade in Newtown, the same paper says;—When the question of the introduction of a railway to this town was discussed, and the *pros* and *cons.* of the subject taken into consideration, it was calculated that the local trades of the neighbourhood would receive a great impetus therefrom, and especially the building trades. So far as our observation goes, every anticipated advantage has been or is in the course of realization; but none, in our opinion, are receiving the benefit to an equal extent with those who are connected with the trades to which we now refer. Never, from the time of the great building mania, which extended from about 1825 to 1835, has there been such a number of new buildings in progress as at present. For years it has been calculated that should the drooping energies of the town again revive, and the trade, local and general, assume its wonted business, a better class of houses would be required than then existed; and no axiom was ever more correct. The building of small houses is quite beside the question, it being considered that of them there are a sufficient number already in existence; and that in the matter of dwellings society generally requires a move upwards; and to all appearance that process is taking place.

Devonport.—The Devonport, Stonehouse, and Cornwall hospital has been completed, and when furnished will be opened for patients. It stands in a healthful situation, on the top of a hill, with windows facing the sea. Mr. Norman was the architect. At a bazaar held to aid in providing

funds for furnishing the hospital, the sum of 800*l.* has been realized.

Sedgley.—Arrangements for commencing the new Public Office are now completed, and the building will be proceeded with forthwith. The building will front the Vicarage, and will be erected where the old Workhouse now stands. There will be a Police-court 37 feet by 20 feet, the entrance to which will be from Gospel End-street. The charge and reserve rooms, and the superintendent's parlour, with bed-rooms over, will form the front building. There will be at the back of the Court a retiring-room for the Justices, and there will be kitchens and bed-rooms for the superintendent and his men; also a number of cells and other necessary buildings. Mr. Charles Hartland is the builder. The cost of erection will be about 750*l.*, according to the contract; and, with the land, the outlay will be upwards of 1,200*l.*, for which the county will pay 60*l.* a-year, and take it on a lease for fourteen years.

CHURCH-BUILDING NEWS.

Cowes.—A considerable population has been gradually gathering in the National Freehold Land Society's estate at Gurnard; and, as no place of worship stood within a mile or two of the spot, the Rev. E. Silver, of Trinity Church, formed the project of erecting there a school-church. The foundation-stone of this building has just been laid by Miss Ward, of Westhill. The dimensions are 48 feet 6 inches by 18 feet 6 inches; and the edifice is situate on the old road to Gurnard Bay, just below Blackwell's Gurnard Hotel.

Winscombe.—Some time since it was discovered that the roof of Winscombe Church was leaky, and the churchwardens made arrangements with Mr. Gibbs, of Bristol, to exchange the old lead roof, which was very heavy, for one of a thinner kind. On stripping the roof, it was found that the beams were rotten, and it was agreed to call in the services of an architect to report upon the state of the building. This duty was confided to Mr. Norton, of London, and he reported upon the urgent necessity of new roofs to the nave and south aisle, and at the same time suggested that a thorough internal restoration of the fabric should be effected. This suggestion was considered and agreed to. A sum of 500*l.* was obtained from the Exchequer Loan Commissioners, the amount to be spread over several years for repayment. This formed the nucleus of the restoration fund. The church has now been entirely reseated, and new roofs and floors provided. The seats are open, and of wainscot oak, many of the antique carved bench ends which were in the old buildings being worked up in the new seats. There is also a new hammer-beam roof, with angel corbels. The walls and pillars have been scraped, and the church has been supplied with one of Haden's apparatus for heating. The chancel was in a very dilapidated state, and it was decided to restore it. The church itself is in the Perpendicular style of the fifteenth century, but in the process of demolishing the chancel it was discovered that it was in the Early English style of the thirteenth century. This being the case, the Rev. J. A. Yatman, a friend and relative of the vicar, decided on rebuilding it in the original style, and there are, consequently, two widely different schools of architecture in the building. There is a triplet window in the east wall, with Purbeck marble shafts. This window will be filled with coloured glass. There are side windows in the chancel, which are to be filled with stained glass from the old windows, cleaned and restored for the purpose. The floor of the chancel is laid with encaustic tiles. The whole of the work of restoration has been performed by Mr. H. Hughes, of Bristol, builder, at a cost of 1,400*l.*, exclusive of the amount for rebuilding the chancel, which will cost about 600*l.*, and which, with the exception of a donation of 100*l.* from the lay vicar, will be defrayed by the Rev. J. Yatman. A new organ has been erected by Mr. Willis, of London.

Hope Bowdler.—The *Shrewsbury Chronicle* reports the re-consecration and opening of the church here. For some years past a movement had been a-foot for its restoration, the old Norman structure having become so dilapidated as to be totally unfit for sacred purposes, and even dangerous to any congregation assembling in it. Such being its condition, it was determined to remove the nave and chancel, and a subscription was entered into for the purpose. A very considerable portion of the sum raised for re-building the church was contributed by the family of Brooke and the relatives of Mrs. Riou Benson, the rector's wife. The east window was erected by the Rev. G. Curtis, in memory of his mother. During the progress of this part of the work it was discovered that the tower was in a dangerous condition, and it was resolved to pull that down likewise: this involved the entire re-building of the church. The new edifice is upon a larger scale than the former one, but upon the same site, and has been built by Messrs. Nevett, of Ironbridge, from designs by Mr. S. Pountney Smith, of Shrewsbury. The building is of stone from the Sowdley quarries in the neighbourhood, with slight mixtures of Grinshill stone in the arches of the exterior. The walls inside are of dressed stone, so that no plastering is used except between the rafters of the nave roof. The roofs of the chancel and vestry are boarded, stained, and varnished. The three lancet windows at the east end are filled in with stained glass by Mr. Evans, of Shrewsbury, the subjects being, "Our Saviour raising Lazarus," "The Woman at the Well," "The Last Supper," "The Crucifixion," and "The Ascension." It was placed there by the Rev. George Curtis, a late incumbent, as a memorial of his deceased mother. The seats are all open, with elbows, and the backs are in part made out of fragments from the old church: the panels of the pulpit are carved relics from the former one, cleaned up and varnished. The choir seats and the reading-desk are framed out of the old timber, also the arched principals and ashlers in the chancel roof.

Lichfield.—St. Chad's Church, the original foundation of which must have been laid upwards of a thousand years ago, was enlarged about twelve years since, by the liberality of Miss Dyott. Much more, however, remained to be done, and the work of renovation has been continued for several years by the Ecclesiastical Commissioners and the rector, by whom the chancel has been restored to its original condition. A new vestry has also just been added, and many other alterations made. From a statement just issued by the Rev. John Graham, incumbent, it appears that a deficiency of 88*l.* remains to be raised to meet the expenses incurred.

Liverpool.—The chief stone of the new church for a part of the district of St. Martin's, to be dedicated to St. Titus, has been laid upon a site selected in Front Portland-street, Vauxhall-road. The site, 108 feet by 54 feet, has been obtained by pulling down a number of houses in Front and Back Portland streets. The only frontages will be to these streets, the east and west ends abutting upon the adjoining property. The style of architecture adopted is a simple adaptation of the Geometric Middle Pointed. The church will be constructed of grey bricks, with red stone dressings, fire-brick arches, and blue brick bands. The edifice will consist of a nave 85 feet long, and north and south aisles, separated by light iron pillars, having hammered iron foliated capitals supporting the open timbered nave roof and gabled aisle roofs; and a chancel, 22 feet by 15 feet, lighted by a triplet sash-window filled in with geometric tracery. The seating will be all free, and consist of open benches, stained and varnished, accommodation being obtained for 600 persons, without galleries. The entrance will be by a double entranced porch, having a triplet window over filled in with geometric tracery. At the north-west angle will be a simple bell-turret, about 75 feet high. The cost of the church will be about 3,200*l.* The architect is Mr. William Culshaw, and the builder Mr. James Burroughs, both of Liverpool.

Wigan (*Lancashire*).—The foundation-stone of a new church, to be dedicated to St. James, has been laid at Poolstock, a rising neighbourhood in which several new cotton mills and other works have lately been and are even now being erected. The edifice will be built and endowed in pursuance of a trust in the will of the late Mr. James Eckersley, of the firm of James Eckersley & Sons, cotton spinners, Wigan, that gentleman having left a sum towards the object, and the funds having been further augmented by Mr. N. Eckersley, the surviving brother of the deceased donor. The building, which will be in the Perpendicular style, will be 78 feet 6 inches long. There will be a tower 100 feet high and 16 feet square, and a peal of six bells. It is calculated that accommodation will be provided for about 700.

Leeds.—When St. Matthew's Church was re-opened, after its enlargement last year, a pulpit and lectern, in Caen stone and marble, were given, the former by the ladies of the congregation, and the latter by Mr. Corson, the architect, under whose superintendence the alterations had been carried out. The old reading-desk, in stained wood, was still used. This has now been removed, and has been replaced by a new one in keeping with the pulpit and lectern. It consists of a moulded Caen stone base and surbase, supporting two pilasters of polished dark red serpentine marble, and coupled polished Languedoc marble shafts, with carved and foliated caps, from which spring two cusped arches and cusped brackets supporting the book-rest. At one end of the desk a carved corbel supports a polished marble shaft with enriched cap. Upon this stands a polished brass standard for the light. Around the book-rest is a border of carved hawthorn leaf. The carving has been executed by Messrs. Mawer & Ingle, of Leeds, who also carved the pulpit and eagle. The brasswork is from Mr. Brawn, of Birmingham. The desk was designed by Mr. Corson, and is the gift of Mr. John Maude, churchwarden.

Allerton Bywater.—The foundation stone of a new church at Allerton Bywater is about to be laid by Mr. T. D. Bland, of Kippax Park. The church is to be dedicated in the name of St. Mary-the-Less, and the necessity for its erection has long been felt in the locality. Messrs. Perkin & Backhouse, of Leeds, are the architects.

Cayton (*Yorkshire*).— The parish church of Cayton has been re-opened. The church had been in the most dilapidated condition. The galleries have been all removed, and the nave seated throughout with uniform open benches.

Hull.—The church of St. Mary, Lowgate, Hull, has been re-opened for service after being closed two years and a quarter, during which time the entire edifice has been restored in accordance with the plans and designs of Mr. Scott, architect. This church was a very unsightly building.

TERCENTENARY OF ELIZABETH COLLEGE, GUERNSEY.

"The School of Queen Elizabeth," or "Elizabeth College," as it is now termed, was founded by that sovereign in the year 1563, and 300 years having now elapsed, the directors have celebrated this event first by a special service in the town church, by the Right Rev. the Lord Bishop of Winchester (Dr. Sumner), the diocesan of the island and visitor of the College.

By the regulations passed in September, 1563, it was ordered that the school should be called the "School of Queen Elizabeth;" also that "The church and cemetery of the Cordeliers, with 26 perches of ground on the north side, and 30 perches on the south side, were given for the building of the school."

It appears that this church stood lower down than the present building (which was erected in 1826), and that the school was really for some time kept in it, besides accommodating the master with a residence. A French historian has said that Richard II. founded a convent of Cordeliers on this site; but Mr. F. B. Tupper is inclined to doubt the assertion.* However this may be, it is certain that the college was originally endowed from lands and buildings belonging to the Crown, which had been either escheated or forfeited.

RAILWAY MATTERS.

The Government inspector has approved of the junction lines on the Great Northern Railway at King's-cross. Through trains between Farringdon-street and King's-cross for the Great Northern were to commence running on the 1st inst.——Formal notice has been given to the Railway Department of the Board of Trade that the Charing-cross Railway will be completed by the 1st of November. The time specified in the contracts for the completion of the works has already expired, and the delay in opening has been solely attributable to the slow progress made in the preparation and delivery of the ironwork for the bridges and stations. The dispute in the iron districts has retarded the delivery of a large quantity of the girders and other portions required for the Charing-cross Station. ——A survey, it is understood, is now proceeding for the purpose of enabling the promoters to obtain parliamentary powers in the next session for the construction of a railway from the Brighton and South-Western on Wandsworth Common to Wimbledon Common, Kingston Vale, Norbiton, Petersham, Star and Garter at Richmond, Kew, and to join the North and South Western at Brentford. The length of the proposed railway would be about eleven miles and a half, and it is estimated by Mr. Fulton, the engineer, that the cost would be 350,000*l.*——Mr. Hawkshaw is to

* "History of Guernsey." A work which has supplied much of the information here presented.

the engineer of the new railways about to be nstructed in the south of Russia, from Moscow Sebastopol and Odessa. The sum to be expended them is 25,000,000*l.*

THE MONTHLY RETURNS OF THE DISTRICT SURVEYORS.

The Superintending Architect, Mr. George Williamy, has made his annual report to the etropolitan Board of Works on the monthly turns by the District Surveyors.

"A general abstract of the returns of fees for e year 1862 is appended to this report, along ith a list showing the comparative revenues of e several districts.

The total of the gross fees for the year is 3,315*l.* 2s. 3d., received in respect of 15,707 rks; of which upwards of two-thirds were done thin the year.

The gross fees received in 32 districts vary from .*l.* to 378*l.*; 11 being under 200*l.* each, 10 under 00*l.* each, and 11 under 400*l.* each. In 24 dis-cts the incomes vary from 406*l.* to 1,267*l.*

The expenses of the district offices, taken mostly the basis of 1861, are 5,049*l.* The fees remain-g due for all arrears are 17,163*l.* 13s. 7d., and the ms abated or lost are 1,140*l.* 17s. 9d.

The results of the present abstract, compared th those of former years, show an increase—

	Works.		Fees received.

NEW IRON BUILDING, GLASGOW.

A building, now in course of construction in gyle-street, a little to the west of Jamaica-street, onstructed, so far as regards its framework, m the level of the street to the roof, entirely of n. The cast-iron columns which rise from the eet level in front and rear of the building rest on massive butts of very hard sandstone, while se in the interior rise from a solid foundation ube stones under the basement floor.

The three structural divisions of the building, ich correspond to the main divisions in the vation, are spanned at each floor by McConnell's rent beams resting on the columns: these beams ich are constructed on a principle patented by ssrs. R. McConnell & Co., in which advantage s once taken of the tensile strength of mal-ble iron united to the resistance and rigidity cast iron) are again connected transversely by lleable iron joists of the T section, each about feet long, by a depth of 6¼ inches, which were ed by the Glasgow Iron Company, from a section pared expressly for the building. The centres oists are 6 feet 6 inches apart. The flooring is 2½ inch battens, 6¼ inches broad, grooved, and gued with strong hoop-iron. The flooring is ened to the malleable iron joists by strong ews. The roof is of timber, in three bays, pported with trussed couples and purlins, and ked in the usual way. The building, which has rontage of 57 feet 6 inches, by a depth of feet, is to be divided on the street-floor into e shops, having large saloons behind, and cor-mponding cellarage below. The upper stories h be divided for warehouses.

The work is expected to be completed before e end of October. The architects are Messrs. n Baird and James Thomson, of Glasgow. construction of the iron-work has been en-sted to Messrs. McConnell & Co.

LETTING OF GAS AND WATER WORKS.*

How gas-works, water-works, and railways are e rated, has been a constant subject of litiga-. The principle of a rate is simple enough the abstract—the value is that for which the table property would let for the purpose to hich it is applied. That principle is not difficult application where the whole property is situate ne parish. But, where the property lies in or more parishes, and especially if the value hat property in the one parish depends upon connexion with some common use of it by the r parishes—how then? For instance, gas-rks are in parish B; the pipes run into parish Without the works the pipes would be worth-s and without the pipes the works would be worthless. The establishment that governs the whole concern is in parish B; the receipts are there collected. How is this to be rated? In the first place, how is the value to be ascertained, and then how is it to be apportioned?

What is its rateable value? The general rule is, that it is that which it would let for by public auction to be used for the purposes to which it is applied. But this rule does not solve the problem of railways, gas-works, and water-works, because they are never so let; and therefore the assessors can only proceed to ascertain the value precisely as a prudent man would do, if contemplating a lease from the company. How this should be done—that is to say, in what manner the amount should be taken—has been the cause of all the difficulties and disputes that have arisen, and which the courts have settled in a very clumsy and unsatisfactory fashion. The process has been adopted of inquiry into profits—a test that is plainly erroneous. When we desire to ascertain the rateable value of a grocer's shop, we do not make him produce his books and prove what are his profits; for this reason, that profits are not rateable, but only the property on which these profits are earned; and if a grocer, with a business of 1,000*l.* a year, choose to carry it on in premises worth 50*l.* a year, while another grocer making only 500*l.* a year prefers to occupy premises worth 100*l.* a year, the poor-rate would be assessed on the value of the respective premises, and the smaller business would pay the higher rate. Therefore, the profits are not a true test of the value of the premises, and there is no just reason why a gas company should be rated otherwise than a grocer is rated. The right manner of ascertaining value would be to leave profits and earnings wholly out of the question, and for a competent surveyor to value the works precisely as he would do if employed by a purchaser;—then in like manner to calculate the annual value of the privilege to occupy so much waste land with pipes. It matters not what these pipes convey, nor where they carry it: the gas is no more an element in the rateable value of gas-pipes than if they carried sewage or smoke: with as much reason might the grocer's rate be raised because he had a pipe to carry his oil from one floor to another. The sum of the two estimates would exhibit the value for sale: a percentage upon this—perhaps about 6 per cent.—would represent the letting value; and the letting value is the rateable value, *minus* the deductions allowed by the law.

Instead of this, the courts have gone into an elaborate calculation of *profits*, and, of course, have been involved in endless difficulty; for the elements of profits vary with almost every business. A fight over a rate at quarter sessions is a conflict about profits—a battle of figures—what the company has spent and what it has received. Starting with a wrong principle, a satisfactory conclusion is not arrived at, and every new case leaves the law more confused than it found it.

The courts appear to be beginning to feel this. In the case of *The Sheffield Gas Company* v. *The Overseers of Sheffield*, 8 L.T. Rep. N.S., 692, the Queen's Bench has confessed the unsatisfactory character of the present rule: "The whole subject-matter appears to be involved in so much difficulty and uncertainty, that we have taken much time in considering whether we could not place the rules as to rating these companies on more intelligible and satisfactory principles, and which should be capable of uniform application. We have not, however, succeeded in laying down a rule which should be consistent with existing legislation and decisions on this subject, and would, at the same time, be capable of being satisfactorily worked."

Having thus confessed that the law is a bad law, the court proceeds to inquire whether the case of *Reg.* v. *The West Middlesex Water-works Company*, 1 E. and E., 716, had been properly adopted in the present case. Now, that case laid it down, rightly enough, that the test of value was what a hypothetical tenant would pay for the property by way of annual rental; but, then, it sanctioned what appears to us to be a wrong method of ascertaining what rent such a tenant ought to pay. It took into calculation the profits of the company, an item which, we respectfully submit, has nothing whatever to do with rating. Whether the company cleared 50 per cent. or lost money by the concern in no way affected the rateable value of the premises it occupied. A bankrupt grocery shop is valued precisely the same as a flourishing grocer's shop—of equal value as a building—neither more nor less. To rate gas-works, water-works, or railways fairly, the right course would be to value the buildings and land as if for sale, and make the assumed rental a fixed percentage on that value, and to rate the pipes at the sum which in fairness might be asked and paid for the privilege of laying the pipes there; and then each parish would be entitled to rate just so much of the property as was within its bounds, and no more. A bill should be submitted to Parliament next session, to settle the mode of assessing these companies upon the basis we have here sought to describe.

* From *The Law Times*.

REMOVAL OF OLD THINGS.

BOLTON, YORKSHIRE.

Sir,—In Mr. Parker's notes on Bolton Castle, Yorkshire, he remarks that "near the fireplace in the kitchen of the smaller hall is a sink or water-drain of plain character, but original, and the leaden pipe which conveyed the water was sold a few years since for 7s., by order of the steward, for the benefit of the estate."

As a sequel to this, I may state that I have just been visiting the castle, and went into the church adjoining. This has just been *restored*, or *re-seated*, by Mr. Atkinson, architect, York. There were here some very fine miserere, screen-work, and other carving, all of which have been turned out, to be replaced by meagre stained deal seats; and, it is said, all this fine work has been *bought by the architect*, with the consent of the vicar and other parties concerned.

This is one of the most gross cases of destruction that I have met with: and when architects assist in destroying what they ought to preserve, it ought not to pass unnoticed.

W. W. Fawcett, M.A., Architect.

KING INA'S PALACE.

Sir,—Many of your readers will probably remember the visit paid by the Somerset Archæological Society to the old house at South Petherton, popularly called by the name of King Ina's Palace. The only conjecture which the archæologists could make respecting the origin of the name was, that the present house may possibly be on the site of a palace, which, having been of wood only, has long since disappeared. But the house as it then stood was pronounced to be a very valuable and rare example of an English manor-house of the fifteenth century, which had altogether escaped alteration, and remained to us in its original state, with all the internal arrangements perfect, including the hall, with a fine roof of open timber-work, the offices, and all the wooden partitions perfect, though in a decayed state. It was probably built by Sir Giles Daubeny, in the time of Henry VI., who is buried in the parish church; and the character of his tomb agrees with that of the house, which remained just as he had left it until the present year. It was an interesting chapter of the history of England, bringing forcibly before us the manners and customs of our forefathers. It was quite capable of being repaired without any alteration, and in that state would have made an excellent school-house, which is much wanted for the parish.

I am sorry to inform you that this interesting relic has fallen into the hands of the Philistines, and has been utterly and entirely ruined. Only just enough of the old building is left to show that the walls have not been entirely rebuilt, and the fine bay window has been marvellously preserved, but in other respects no one could recognize the house as the same. This valuable chapter of our domestic history is totally erased and obliterated for ever. The only chance of our having any record of it preserved is, that some architect may have made a set of careful drawings of it; and, if this should be the case, I hope he will communicate the fact to the public through your pages. It is not to be expected that the man who has done this wicked deed should have preserved any such record of his own stupidity: he evidently has all the self-conceit which so often accompanies extreme ignorance, and he has added insult to injury by changing it into a piece of vulgar Cockney Gothic, with a ludicrous attempt at Gothic chimneys, in the place of the valuable treasure which he has destroyed, because he was too stupid to understand its value. He was fairly warned of the consequences of what he was going to do, and that he would bring upon himself the execration of every archæologist in England, and their name is legion. The pillory is unfortunately abolished, or he would richly deserve it, but a moral pillory still exists through your pages, and this should be brought into full play. Every edu-

cated man of his acquaintance should *cut him*, as unworthy to associate with educated people: every educated lady should laugh at him, or express her scornful pity for his ignorance. If he is a member of any society of architects, he should at once be expelled from it as a disgrace to the body, and not fit to bear the name of an honourable profession. His employer, who purchased this well-known relic of antiquity over the heads of several others who wished to buy it for the purpose of preserving it, will have reason enough to repent of his rashness: he could have built a better house in a better situation for less money, and have left the old fabric alone: he would not then have had to pay for draining a swamp, nor for a law-suit arising from the bad title, and would not have made himself the laughing-stock of all his acquaintance. F. S. A.

AN INQUIRY AS TO PORTLAND CEMENT.

It will be a satisfaction to architects and builders generally, if any of your chemical correspondents will inform them what are the peculiarities of Portland cement which should make it a permanent and enduring substitute for Roman cement. The latter is a natural cement: the other is synthetic. Portland cement becomes excessively hard; so will many other compositions; but the question is, whence does it derive the element of durability? It has not been known more than twenty years, if so long.

The heavier this cement is, the more it is generally preferred; and this property is derived from burning the ingredients so highly, that all trace of their original properties, either as clay or lime, are entirely destroyed, and converted into something else. What?

I venture to make this inquiry of your scientific readers, because it is of the utmost importance to all our building operations, that they should be carried out with confidence, and because, as a practical man, I fear that such confidence is not justified. If it were not invidious I could point to several works in Portland cement of the most respectable houses in the cement manufacturing business, where, after months' and years' duration, and even after rewards and medals by the Exhibition of 1851, it, now only, appears palpably to be failing.

I am very much of opinion that Portland cement will eventually be found to be inferior to the natural cements; that it is a "nine days' wonder;" but I am at a loss to understand why a material which indurates so excessively for a time should not continue that property, but bulge and crack, and disintegrate. I will take three or four of the first manufacturers for my instances, and show where their works were highly approved, and are now failures. I believe that they know little or nothing of the intrinsic properties of the article they make. For this reason I ask for information that may guide us all. Cautious.

ANCIENT HEWERS OF WOOD: A STUDY FOR OUR TIME.

Considerable skill is required to hew timber. It requires more expertness to fell and prepare timber than is generally practised. Reading Vitruvius's rules relative to this (lib. ii., cap. 9), I venture to send you the sum: "*Usui civium decori urbium*" our motto:—1. Trees should be felled in autumn, or in the winter, and in the wane of the moon; for in this season the trees recover their vigour and solidity. Strength was dispersed among their leaves, and exhausted by their fruit, in spring and summer: they will thus, late in the year, be free from a certain moisture, very apt to engender worms and rot them; which damp in autumn and winter is consumed and dried up. 2. Trees should not be cut down *at once*. They should be cut carefully round towards the pith, that the sap may drop down and distil away; and thus left until thoroughly dry, and then cut down entirely. 3. When fully dried, a tree should not be exposed to the south sun, high winds, and rain; and should be smeared over with cow-dung, to prevent its splitting. 4. It should never be drawn through the dew, but be removed in the afternoon. 5. It is not fit for floors, doors, or windows till it has been felled three years. Perhaps these directions attended to would prevent the dry rot. We see from them that sawyers, carpenters, joiners, and builders, ages ago, were taught how to cut timber. The Sidonians excelled herein (1 Kings v. 6). They cut cedar out of Lebanon for Solomon. Cedar, naturally bitter, therefore offensive to worms, was found fresh in the Temple of Utica, in Barbary, about 2,000 years old. Some, in modern times, build in a hurry, and the building does not last, the wood being worm-eaten. As a chemist, I venture to assert that timber, steeped in intensely bitter solution, viz., bichloride of mercury, being distasteful to worms, will be indestructible, if the rules of Vitruvius be followed fully.

The Canadian woods at present produce much timber; but, alas! the trees are tapped for resin and turpentine; their natural antiseptic principle is removed; the wood is sapless; the dry rot follows. The natives are too greedy in tapping; and our houses suffer in consequence. It seems, therefore, necessary, to restore artificially, what has been thus removed from foreign timber.

Worm Fence.

HOLBORN VALLEY.

Sir—You will oblige me by inserting in your next number the following extract from a letter which appeared in various journals, January, 1859:—

"The improvement of the communication from Holborn-hill to Skinner-street, first occupied my attention in 1839, when I made the requisite surveys, and submitted my plan to the Court of Common Council in 1841, which was referred to the Farringdon New Street Committee, and subsequently, in 1842, to the London Bridge Approaches Committee. The plan met with much support from the late Thomas Henry Hale, Esq., and other influential members of the Corporation; it was also brought under the notice of the then First Commissioner the Earl of Lincoln, and by his Lordship favourably entertained. In June, 1855, I was examined by a Committee of the House of Commons relative to this project and the proposed New Line of Street from the King's Cross to the Post Office."

Copies of the said letter were forwarded to the Architect and several members of the Metropolitan Board of Works, and to those members of the Corporation who have taken much interest in the project when under their consideration.

I was induced to give every publicity to my claim of priority immediately after my attention had been called to Mr. Marrable's drawing when it hung in the reading-room at the Guildhall, January, 1859. My effort, however, does not seem to have produced the desired effect.

Thos. Taylor.

*** Since this was set up we have received a letter from Mr. Marrable, stating distinctly that his plan differs entirely from that made public by Mr. Taylor.

QUANTITY SURVEYORS.

Sir,—Never was your publication so much required by the surveying profession as at the present time. I hope that through its columns it may lead to the reformation of the disgraceful abuses now existing among a certain few touting surveyors, who run after everything advertised in your journal. With reference to the Thames Embankment estimates, as advertised, a certain party, I will suppose, obtain a copy of conditions, &c., begin and get out quantities, and send round to builders, stating they are employed by So-and-so, and asking or begging they will take a copy from them (I have a letter by me).

To say the least of such conduct, it appears offensive and troublesome. No consideration is made by these worthies whether they interfere with another's connexion or not, and in many instances the respectable surveyor (who awaits his business in the usual way) loses the opportunity of working for his old clients. Builders, in many instances, are induced to take copy from the circumstance of seeing other names, although their own surveyor would have been employed in the ordinary course of business, thereby insuring confidence in all that is done. I, for one, am desirous of stopping this system among a certain few, and would suggest a meeting of builders, to adopt a line of conduct agreeing (as in former days)), to employ men only of experience and standing in the profession. Scrutator.

Miscellanea.

Archæological Discoveries at Athens.—Some tombs have been discovered in the suburbs of Athens on the Via Sacra. In one of these is a *bas-relief*, representing a combat between an armed equestrian and a warrior on foot, having indents for the insertion of ornaments in bronze. An inscription declares that the tomb was erected in the time of the Archon Eubulitos (B.C. 394), in honour of an Athenian killed in the battle of Corinth, twenty years after the death of Pericles.

Discovery at Pershore.—In the course of some excavations at Pershore Abbey Church, Worcestershire, the workmen, in digging round the foundations, have found the remains of a tesselated pavement, which once constituted the floor of the north wing of the abbey church. Remains of a similar description were found in St. Edgar's Chapel. Men with bows and arrows, lions, deer, and other devices were depicted on the pavement. It is contemplated to take the whole of the pavement up, and replace it in the interior of the church. Pieces of the bells which were broken or melted at the great fire which consumed a portion of the edifice have also been found.

Munificent Parsees.—Sir Jamsetjee Cursetjee, son of the late Sir Jamsetjee Jeejeebhoy, has contributed a lac of rupees for the construction of a college at Poonah; and Mr. Cowasjee Jehanghir, a well-known and liberal Parsee merchant, has offered 7,500 rupees to complete the steeple of the Protestant Memorial Church of St. John, Bombay, and to place in the tower an illuminated clock. He has also undertaken to erect forty drinking-fountains at different places on the island.

Action through Breakage of an Hydraulic Press. — The plaintiffs were Messrs. Perera, Spanish merchants, Deansgate, and the defendants, Messrs. Bellhouse, engineers, Manchester. The action was brought to recover 50*l*. for damages sustained by reason of the breakage of an hydraulic press furnished by the defendants. A number of practical and consulting engineers were examined on each side, and their evidence was very conflicting. The plaintiffs' witnesses swore that the machine was so lightly constructed and so made that it was impossible to sustain a pressure of three tons. On the other hand, the defendants' witnesses proved that, making full allowance for the defective casting, the machine was quite capable of sustaining a pressure of six tons. They attributed the cause of the accident to a fracture, which had probably arisen months before the accident, through what was possibly carelessness in the use of the machine. The case occupied the court about five hours. The judge ultimately gave a verdict to the plaintiffs for 40*l*. 10s. 6d.

Blasting Extraordinary. — A remarkable blast in iron mining took place at the Lake Superior Mine a short time since. In ordinary ones but a 1¼-inch hole in diameter is drilled, but in this case one of 4 inches and 18 feet deep was made, distant from the edge of the cliff about 10 feet, into which one keg of powder was put and exploded as a preliminary, and which had the effect to open a seam to the depth of 50 feet. Sixteen kegs of powder were then put in as a final charge, which threw down over 3,000 tons of ore completely broken up.—*Galignani* speaks of a gigantic mine that was exploded on the 18th, near Mergozzo (Piedmont). A gallery had been pierced under the granite hill to be blasted, a work which it had taken a whole year to complete. The mine was charged with 20 metrical quintals (4,430lb.) of gunpowder, and fired from three different points at a time. The quantity of granite thus detached was estimated at 30,000 cubic metres, much less than was calculated upon; but the rest is much shattered. The firm was obliged to deposit 1,000,000fr., as a security for damages to neighbouring landholders in case of disaster; but the shock was hardly felt at a distance of 2 kilometres.

Railway Preference Shares. — Of the 20,524,251*l*. of shares issued by the Great Western proper at the close of 1862, 12,138,778*l*. was preference stock. It is under this enormous burden of preferential capital, at from 3 to 8 per cent. interest, that the dividends of the ordinary shareholders have been slowly falling. The dividend on the ordinary stock (8,173,487*l*.) was 2·62 per cent. in 1861, and 1·75 per cent. in 1862. The company has this year undergone a complete transformation, having absorbed the West Midland and South Wales; but new Acts of Parliament cannot enable undertakings to dispense with previously existing obligations. The Lancashire and Yorkshire has a much smaller proportion of preferential capital, the total at the close of last year having been 3,077,570*l*. The ordinary capital of the company is no less than 12,093,594*l*. which received 5½ per cent. in 1861 and 3⅞ per cent. in 1862, the reduction arising from the depression in the cotton trade. Up to the period of the measures now in progress for raising 2,197,000*l* of preferential capital, the directors of the London and North-Western appear to have rigorously abstained from the creation of preference stock only 270,000*l*. having been outstanding at 5 per cent. in 1861 and 1862, while the ordinary share capital amounted to 25,296,921*l*. in 1862, on which 4⅝ per cent. was paid, as compared with 25,224,349*l*., on which 4¼ per cent. was paid, in 1861. The London and South-Western, at the close of 1862, had preference stock outstanding to the extent of 1,648,905*l*. The ordinary stock of the company amounted in 1861 to 7,200,256*l*. receiving 4¾ per cent.; while in 1862, 7,381,281*l*. received 5 per cent. The London, Brighton, and South Coast had 3,339,000*l*. of preferential capital outstanding at the close of 1862. The ordinary stock amounted to 4,620,000*l*. in 1861, and 4,705,473*l*. in 1862—a steady 6 per cent. being paid in both years.

Milton Hall, Camden-town.—This new hall, for concerts and various social, moral, educational, and religious purposes, of which we have already spoken, is now open to the public. The cost of the building, which is in the Tuscan style, is stated at about 1,000*l.* The hall seats 400 persons, and there are class-rooms, school-room, &c., connected with it. Intoxicating drinks will not be allowed to be used on the premises. Mr. W. Scocter, of Kentish-town, was the builder.

New Machine for Blacksmiths.—A machine for making socks has lately been invented by Mr. Birnie, an Aberdeen blacksmith. It is adapted, says a local paper, for making, with a slight adjustment, which can be effected in a minute, both plain socks, and socks with raised backs, long or short in the barrel, deep or ebb on the land side, or a fractional part of an inch; and is so much superior to the old method that, to a person with a fair trade, there is a saving by the use of it of at least fifty per cent.

Antique Pavement at Dorchester.—There has been a recent discovery at Dorchester of an antique tessellated pavement, which came to light during the laying of a drain on the south of a new house between the County Hospital and the West Walks, and about 2 feet below the surface: a paved area of 15 feet by 7 feet was eventually laid bare. The pavement, as described in the local *Chronicle*, consists of two portions, one running nearly east and west, and the other at right angles to it. These may have formed parts of two sides of an *atrium*, a portion of tessellated work, perfectly plain, appearing at the angle. The coloured portions at the sides are of geometrical design. The principal feature in one case is that of intersecting circles, and in the other of half circles. The intersections of the circles are filled in with colours, the prevailing tone of which is ornamental brick red and blue lias.

Cheap Railways.—The county of Donegal, says the *Freeman*, has gained the distinction of making the cheapest railway yet constructed in the United Kingdom. It is termed the Finn Valley line, and has just been inaugurated by the Lord Lieutenant. Its length is thirteen miles, and the total cost has been 69,972*l.*, or 5,380*l.* per mile, while the average cost of all the railways in Ireland has been 18,424*l.* Only 8*l.* 10s. per mile of receipts per week is required, therefore, to enable the shareholders to enjoy a dividend of 5 per cent. The work is stated to be thoroughly well executed; and although, of course, the route was in itself of an easy character, the main causes of the economy achieved are stated to have consisted in vigilant supervision and the absence of enormous compensations for land or other drawbacks of that description. There are also other lines in progress in the same district. One is a railway of nine miles from the city of Derry to Farland Point, the cost of which it is said will be only a little over 30,000*l.*, and the other is to be an extension of seven miles to Buncrana, at a cost of 29,000*l.*

London Water Supply, South Essex Water Works.—In consequence of the recent remarks in the *Builder* as to the waters at present supplied to London, and the opinion expressed that they are neither sufficiently pure nor copious, the Secretary to the South Essex Water Works Company writes us, and especially in reply to the question, "What chance is there of a supply from these?" stating that his company "is quite prepared to supply any deficiency that exists in any part of London with spring water [from the Lea, in Essex, of which we have before spoken, which is said to be] of excellent quality, perfectly free from organic impurity;" and that as the water they offer to London "requires only thirty miles of main instead of one to Wales, it can be supplied at a much cheaper rate, and it is also more wholesome and pleasant water to the consumer." The present parliamentary powers of the company, it appears, enable it to distribute over to Brentwood, Romford, Ilford, Barking, and other places between the Grays and the district present to the eastern suburbs of London. After dividing for these districts, a very large surplus water, it is said, will remain, which it is proposed eventually to carry to the metropolis in augmentation of the present limited supply. The three districts have been divided for the high and low services. The former includes Brentwood, Wanstead, and places adjacent: the latter comprises Romford, Ilford, Barking, and other places between the Grays and the east end of London. The high service is finished; and the low service, as far as Romford, is in course of construction, and nearly completed.

Improvement in Wheels.—A wheel, invented by Mr. Henry Mulliner, of Leamington, instead of being made with the ordinary number of fellies, one to every couple of spokes, is formed of two pieces only, which are bent by machinery to the circular shape, and are clamped together at the joints with a bent iron plate, which is riveted through the wood to the iron tire. The timber employed is the white hickory of America.

Tenterden.—We are asked to make clear that the architect of the new church here, attributed to "Mr. Hill, of London," in our last, is Mr. Gordon M. Hills; and we do so willingly. Mr. Gordon Hills is one of the unpretending workers whose good doings we shall always be glad to chronicle. By the way, it seems more than likely that Tenterden is to have the advantage of a railway closer at hand than at present exists. The Government is understood to favour the scheme.

The "Great Eastern."—Long ago I recommended in your columns two screws to be placed, one on each side of the rudder-post, to facilitate the steering of this vessel. This the daily papers have lately described as having been tried successfully in another steamer. It now appears, also, the mountainous paddles become liable to injury in a stormy sea. Permit me to suggest that these be removed altogether, placing instead three smaller paddles, with their appendages, on each side. This could be done with present engines, adding extra shafts and cranks, also lowering bearings. The steerage power of the "Great Eastern" would, with this alteration, be equal to any conceivable emergency, as the paddle abaft midship on one side could be reversed, whilst the forward paddle on contrary side is by its action turning round the bow of the vessel. Besides, with any sea, one of the sets of paddles would be working efficiently.—George Walcott.

St. Cuthbert's Church, Wells.—Some recent works in St. Cuthbert's, at Wells, have resulted in the discovery of an altar to the Virgin, that appears to have been erected at no very distant period from when it was cast down in fragments by the iconoclasts. Placed on the east wall of the north transept, several lines of sculptures, comprising figures of saints with their appropriate emblems, soar above one another: in the centre was the Virgin holding the Saviour on her knee. Her dress was the customary blue and red robe, powdered with gold stars. The figures are about 4 feet high, and all sculptured in the late manner of the fifteenth century. Upon the entire remains the original colourings, red, green, blue, and white, exist in a very vivid condition, and the gilding, which had been profusely employed, is still hardly tarnished. On the corresponding wall of the south transept in the same church has been found a Jesse tree, carved in stone and coloured. The original contract for the execution of this still exists among the city records, and specifies the price at which the whole was produced—namely, 40*l.* There is a probability of the proportions of this church being revealed interiorly by removal of certain galleries and opening the tower-arch, now blocked by the organ.

York School of Art.—The annual meeting of this school has been held in the rooms of the school, in Minster-yard—the Archbishop in the chair. In course of his address, his grace alluded to the demand for beauty in the market. They might depend on it, he remarked, that ugliness was going out of fashion. He spoke of the improvement which was being made in the appearance of dwellings. Antiquity was York's great beautifier; but London in its modern aspect, he had perceived, was greatly altered. A man now turned his attention towards making his house and warehouse places of beauty; and no doubt many places in the streets, instead of being long rows of plain windows and doors, now were rendered objects on which the eye could rest with delight. But this was only one reference to that which affected everything. His grace then referred, as a result of these art institutions, to the improvements which had been made in carpets, and alleged that the designs into which precious metals were now wrought exhibited some impress of the artist's hand. They owed it to these schools that they were surrounded by objects of beauty. Something like 1,000 children were indirectly under instruction by means of this school. The truth was, that every one of them ought to have a little education in art. He could not sympathise with the report, and the sanguine language in which it spoke of the stride which the institution had made from 99 to 111 pupils. There was not a child in York but who ought to learn something about drawing, without reference to his prospects.

Restoration of Gloucester Cathedral.—The dean and chapter of Gloucester have requested Mr. G. Scott to make an examination of the cathedral in conjunction with Mr. T. Fulljames, and prepare plans and estimates for its restoration.

West London Union Workhouse Competition.—Thirty-three designs were submitted in reply to advertisement, and have been exhibited to the guardians and others in an out-of-the-way room called Farringdon Hall, just off Snow-hill. Holloway, we believe, is the intended site.

File-making by Machinery.—A "Report on the Employment of Machinery in the Manufacture of Files," by Richard Allinson, has been published under the auspices of the Patent File Company of London and Birmingham. From this report it appears that the patents to be used by this company are that of M. Bernot, which has been in use for four years in Belgium, and that of Mr. Greenwood. The object is to carry out the manufacture in its various processes; and it is said that not only far cheaper, but better files can thus be produced than by hand; the teeth being more regular and hence wearing more uniformly and doing more work in a given time. The new company is said to be establishing itself satisfactorily, and measures are in progress for starting their manufactory in Birmingham with the least possible delay. The machines have been tested, and the *Birmingham Daily Post* reports very favourably on the subject.

Architects' Charges for Extras.—In the Wrexham County Court, before a Welsh jury, an action was brought by Mr. M. Gummow, architect, Wrexham, to recover 10*l.* 2s. from Mr. Bunn, a builder, in Wrexham, for certain measuring and surveying alleged to have been done on Mr. Bunn's behalf. In 1861 the defendant, Mr. Bunn, agreed to build a villa for Captain M'Coy. Mr. Gummow was the architect, and superintended the work. The original contract was deviated from, and some additions were made. The builder sent in a bill for extras, amounting to something like 808*l.* This was finally agreed to, and the 808*l.* was paid by Captain M'Coy to Mr. Bunn. These extras had been measured by Mr. Gummow, the builder assisting. The custom, according to plaintiff's counsel, was that the expense of measuring and valuing extras should be divided between the builder and the owner of the house. This he said he should be able to prove, and he should also be able to prove that the defendant had made an application to the plaintiff to do this measuring. Evidence was then given both for and against the assertions on the part of the plaintiff; and the judge having summed up, the jury gave a verdict for the defendant, in which the judge said he quite agreed.

Transmission of Musical and other Sounds by Electric Telegraph.—Our readers may recollect being amused some years ago with the idea of playing musical instruments, or distributing a concert, by telegraph. An invention of a Mr. Ladd is now spoken of, which seems to realize something like this idea. The instrument, as described, consists essentially of two distinct pieces of apparatus, which it would occupy too much space to describe. "The method of producing sound in the receiving-instrument depends upon the fact that, at the moment of magnetizing or demagnetizing a piece of iron, there is an alteration in the arrangement of the particles which gives rise to a slight ticking noise. Having connected the transmitter, by means of an insulated wire, with the receiver, and the binding-screws having been brought in connexion with a battery of three or four elements, if the finger-key on the transmitter be pressed the person at the receiving station hears the ticking noise; and, as all musical notes are the production of pulsations at regular intervals, we have simply to find some means of making and breaking contact a number of times equal to the pulsations of the note to be conveyed. This is done by the elastic membrane. The operator places his mouth to the tube in front of the instrument and sings a note, when immediately the membrane begins vibrating in accordance with the note sounded, and at each vibration breaks contact between the pin and plate in its centre." The "finger-keys and small magnet at the sides of the instruments are for the purpose of varying the methods of communication by the combination of single sounds, and can also be used with the other parts for the purpose of regulating the length of the notes, and dividing them into varying portions, so as to form a sound-alphabet somewhat similar to the signals written by Morse's telegraph."

Gas.—The Shaftesbury Gas Company have declared a dividend of 6 per cent. per annum, and resolved on a reduction in the price of their gas. ——The Sunderland Gas Company have declared a dividend of 4 per cent. for the last half-year.

Panic in the Iron Trade.—The strike of nineteen weeks having ended in the masters giving way and agreeing to a rise of 1s. a ton, or about 5s. 6d. a week, on the puddlers' wages, and a proportional rise in other wages, the masters meditated a second nominal rise in the price of iron such as that of 10s. a ton, which they then put on; and as the workmen threatened a new demand in consequence, a rush of orders came upon the iron-masters, who at length refused to take more except at an advance of 1*l.* a ton. They have since had a meeting, and have declared a farther rise of 1*l.* a ton, making a rise of 1*l.* 10s. in six weeks, and the nominal price of best Staffordshire bars 8*l.* 10s. a ton. Wages at the same time are to be raised 1s. a ton for puddlers, and others in proportion, as before; so that puddlers will now receive 10s. 6d. and certain millmen 12s. 6d. a week more than before the strike. It is believed consumers will not buy at the prices indicated.

The Hotel Building Movement.—The Clifton Hotel Company propose erecting in Clifton a building at a cost of 40,000*l.* The directors are gentlemen of influence and position, and a large number of shares have been taken. The company have purchased the Bath Hotel and several adjacent houses, being unable to obtain possession of another site, as originally intended. The whole of the premises, with the exception of one house in Gloucester-row, will be pulled down, and a large building erected.——A new hotel is also to be built in College-green, Bristol, by a company who have purchased the houses between the cathedral and St. Augustine's Church, on which site the hotel will stand. In the event of a central station being built, this hotel will be desirably situate.——It is stated that the Great Northern Railway Company have purchased the Wellington Hotel, near the Central Station, Leeds, and the property surrounding it, for 8,000*l.*, with the intention of erecting a large new hotel upon the site.

Pneumatic Despatch.—Workmen have commenced the necessary excavations in Seymour-street for the extension of the Pneumatic Despatch from the Euston Station of the London and North-Western Railway, to the General Post-office in St. Martin's-le-Grand, and to Messrs. Pickford's depôts in Gresham-street. The total additional distance between Euston-square and the City will be 2½ miles; making, with the distance between the North-Western District Post-office and Euston-square, now in daily operation, a length of 3½ miles. There will be a central intermediate station at the Holborn District Post-office, opposite the London and Westminster Branch Bank. It is also in contemplation to have a station at Smithfield, and branch lines to Covent Garden and to Charing-cross Railway and Post-office. A 5½-inch tube, instead of a 30-inch, is now being constructed, and it is expected that the line may be so far completed as to permit of the transmission of the Christmas traffic into the City from the London and North-Western Railway at that period.

Artesian Well, Doncaster.—Although the contractors have been delayed in the boring for the artesian well in the Holmes, says the local *Gazette*, it is confidently expected that the contract for the additional depth will be completed in a fortnight. The boring rods are now passing through a bed of clay, and the prospects of finding water adequate for the supply of the borough at the present depth are doubtful. Mr. Dale, the engineer of the Hull water-works, met the local board of health, at the Mansion House, on Monday last, and he expressed an opinion that at the completion of Mr. Clark's contract, a fresh source of water would not be met with. He stated that he had come to this conclusion from the circumstance that on his taking charge of the work he was led to believe that gritstone had been reached, but he had since ascertained that this was not correct. He considers it desirable to obtain water from the red sandstone, and he believes that the supply from it would be adequate for a population much larger than Doncaster. After hearing Mr. Dale's opinion, the board decided that the present contract should not be stopped, but if water be not then reached, the board will deliberate upon the plan to be pursued for the future. Mr. Dale has had considerable experience in artesian wells, and he entertains, we understand, a decided conviction that the result of the boring will ultimately be successful.

The Drinking Fountain Movement.—A new drinking-fountain, in the Market-place of Durham, has been formally inaugurated by the mayor and corporation of the city. The erection is from designs by Mr. Robson. The total cost of the structure is 180*l.*——The first stone of the fountain in the centre of the Market-square of Northampton, presented by Mr. S. Isaac, has been laid.

A Disputed Contract.—At a recent meeting of the Taunton Board of Health, Mr. John Edwards, house decorator, complained that he had been dealt most unfairly by, with reference to a tender for renovating and decorating the premises of the Board. He was at the Board-room ten minutes before twelve o'clock, the time specified for the reception of tenders; remained there until after twelve; and, when he left, no other tender was brought in. Mr. Hellard observed that Mr. Edwards's tender was the only one which was given in at the time specified, and there was no doubt that he was legally entitled to the contract. He moved that Mr. Edwards's tender be accepted. The chairman said the committee had accepted the lowest tender, and the work would be commenced the following morning. As to the question of legality, no one was legally entitled to a contract until his tender was accepted. Mr. Goodland said the questions in these matters were, whether twelve o'clock was a strict limitation, and whether a tender delivered after that time could be accepted. Mr. Marwood said he would have received tenders at any time on Saturday. Mr. Hellard's motion, after a lengthened discussion, was put to the meeting, and lost by nine votes to three. Mr. Edwards stated that he should instruct his solicitor to claim the contract.

TENDERS.

For the erection of four villas at Norwood. Mr. T. K. Green, architect —

Matthews	£2,930 0 0
Huckle	2,654 0 0
Donelly	2,475 0 0
Harrington & Brown	2,440 0 0
Macey	2,350 0 0
Ring	2,200 0 0
Cook	2,110 0 0
Richards	1,827 0 0
Harwood	1,650 0 0

For building two houses at Goose-green, Peckham, for Mr. Tyler. Mr. Rawlings, architect :—

Thompson	£1,876 0 0
Harrington & Brown	1,795 0 0
Sawyer	1,583 0 0
Brasher	1,547 0 0

For pulling down and rebuilding premises at Berner's-mews, Oxford-street, for Mr. Tozer. Mr. Henry M'Calla, architect :—

Simmonds	£378 0 0
Howe (accepted)	237 0 0

For the erection of three houses at the corner of the East India-road and Stainsby-road. Mr. F. Fred. Holsworth, architect. Quantities supplied by Mr. R. Richardson :—

Bishop	£3,545 0 0
Manley	3,372 0 0
Patrick	3,334 0 0
Baugh	3,204 0 0
Harvey	3,195 0 0
Tracey	3,177 0 0
Simmonds (accepted)	2,984 0 0

For the erection of New United Methodist Free Church, Stockwell, Surrey. Mr. S. Stedman, architect. Quantities not furnished —

Jenner & Hopson	£1,135 0 0
Marsland	800 0 0
Lathey, Brothers	747 0 0
Warne & Geddy	654 0 0

For the erection of a new inn at Emmer-green, Oxon, for Messrs. Blandy, Hawkins, & Co. Mr. Wm. Brown, architect :—

Bricklayer's Work.

Wheeler (accepted)	£410 0 0

Carpenter's Work.

Woodroffe (accepted)	335 0 0

For erecting a Wesleyan Chapel at Enfield Town. Mr. F. G. Widdows, architect. Quantities supplied :—

Green & Son	£1,765 0 0
Farr	1,700 0 0
Simmonds	1,639 0 0
Field & Son	1,620 0 0
Patman, Bros.	1,568 0 0
Cushing	1,536 0 0

For new church now erecting in Barham-terrace, Lambeth :—

Cubitt	£5,661 0 0
Patman	5,584 0 0
Higgs	5,300 0 0
Cumlet	5,055 0 0
Jack & Shaw	4,750 0 0

Accepted for cloth-warehouses, for Messrs. S. & S. Musgrave, Leeds. Messrs. Lockwood & Mawson, architects —

Excavator's, Bricklayer's, and Mason's Work.

Nicholson & Son	£2,875 0 0

Joiner's Work.

Cookson	2,000 0 0

Plumber's Work.

Lindley & Johnson	264 0 0

Plasterer's Work.

Wilson & Son	182 15 0

Ironfounder's Work.

Marsden	99 11 5

Slater's Work.

Watson & Wormald	107 15 0

Painter's Work.

J. B. Hopes	108 8 7

For sail-loft and shops, Emmett street, Poplar, for Mr. George Saul. Mr. J. W. Morris, architect :—

Brown	£948 0 0
Munday	925 0 0
Watts	840 0 0
Jeffrey	825 0 0
Heiser	819 0 0
Sheffield	779 0 0
Salt	771 12 0
Hack & Son	738 0 0

For rebuilding house and premises, Emmett-street, Poplar, for Messrs. Young, Son, & Company. Mr. J. W. Morris, architect :—

Salt (accepted)	£300 0 0

For a pair of villas at Woodford, for Messrs. Blidberg & Tho'ander. Mr. J. W. Morris, architect :—

Watts	£1,605 0 0
Jeffrey	1,6 0 0 0
Atherton	1,472 0 0
Sheffield	1,459 0 0
Hack & Son	1,430 0 0
Salt	1,430 0 0
Heiser	1,388 0 0
Brown	1,374 0 0
Kilby (accepted)	1,215 0 0

For the erection of market, hall, &c., Ruthin. Messrs. Poundley & David Walker, architects. —

Chester & Co.	£4,236 0 0
Conway	4,200 0 0
Hamer	4,100 0 0
Pritchard	3,981 17 6
Owen & Jones	3,965 0 0
Ellis	3,580 0 0
Roberts & Holland	3,556 0 0
Neil	3,550 0 0
Porteous	3,546 0 0
Roberts	3,494 0 0
Evans	3,387 0 0
Williams	3,300 0 0

For alterations and additions to St. John's Church, Buckhurst-hill. Messrs. Smith & Widhams, architects. Quantities supplied by Mr. W. R. Gritten :—

Ennor	£2,786 0 0
Williams	2,273 0 0
Myers	2,241 0 0
Wades	2,240 0 0
Howlett & Brown	2,100 0 0
Jacobs	1,985 0 0
Hill & Sons	1,920 0 0
King & Sons	1,893 0 0
Dove, Brothers	1,895 0 0
Hack & Sons	1,787 0 0

For finishing the Clarence Hotel at Teddington, for Mr. Hodgson. Mr. Wimble, architect. Quantities furnished:

Brown & Robinson	£3,700 0 0
Piper & Wheeler	3,570 0 0
Nicholson & Sons	3,510 0 0
Macey	3,389 0 0
Goulter	3,380 0 0
Mason	3,264 0 0

London: LONGMAN & CO. 39, Paternoster-row, E.C.

KELLY'S PRACTICAL BUILDERS' PRICE-BOOK; or, Safe Guide to the Valuation of all kinds of Builders' Work; with the Modern Practice of Measuring, at large; extract of the New Building Act for regulating the Construction of Buildings. Revised and Corrected by New Calculations upon the present Value of Materials and Labour. Arranged for the Architect or Surveyor, assisted by several experienced Measuring Surveyors. Illustrated and exemplified by Steel Engravings and numerous Woodcuts. Royal 8vo, price 8s. neatly bound.

London: published by T. KELLY, Paternoster-row; SIMPKIN and MARSHALL; and may be had of all Booksellers.

Two of whom may be had, New Editions in the course of the following Practical Architectural Works:—

PETER NICHOLSON'S PRACTICAL CARPENTRY, JOINERY, and CABINET-MAKING, Revised by TREDGOLD; being a new and complete System of Lines, for the Use of Workmen; founded on Geometrical and Mechanical Principles. Ten parts at 3s. or in boards, 30s.; containing upwards of 190 Steel Plates, and numerous Woodcuts. Preparing.

PETER NICHOLSON'S PRACTICAL MASONRY, BRICKLAYING, and PLASTERING (revised by TREDGOLD), both plain and ornamental; containing a new and complete System of Lines for Stone Cutting, for the Use of Workmen; the Operation of Mortars, Cements, Concrete, to which is added a variety of new designs for Mural Tablets, Tombs, Gravestones for Cemeteries, &c.; and a description of the various materials employed. Ten parts at 3s. or in boards, 30s.; containing upwards of Ninety Steel Plates and Numerous Woodcuts.

TREDGOLD and NICHOLSON'S Theoretical and Practical Treatise on the FIVE ORDERS of ARCHITECTURE; containing plain and simple Rules for Drawing an Entire Building in the purest style; including an historical Description of each Order. Illustrated by upwards of Two Hundred Steel Engravings, executed by Artists of first-rate talent, including numerous Diagrams, &c. Twelve parts at 3s.; or in boards, 36s.

DESIGNS for COTTAGE and VILLA ARCHITECTURE: containing Plans, Elevations, Sections, Perspective Views, and Details, for the Erection of Cottages and Villas. By S. H. BROOKS, Architect. Beautifully engraved on steel, with Directions for Building, and the estimated Cost of each Edifice. Twelve parts at 2s.; or in boards, 27s.

DESIGNS for PUBLIC BUILDINGS, consisting of Plans, Elevations, Sections, Perspective Views and Details of Churches, Chapels, Schools, Almshouses, Gas Works, Markets, and various buildings for public purposes. By S. H. BROOKS, Architect. Beautifully engraved on steel. Ten Parts, at 3s. or 32s. boards.

THE HOUSE DECORATOR and PAINTER'S GUIDE: containing a series of Designs for Decorating Apartments with taste, and suited to the various styles of Architecture. By T. and A. ARROWSMITH, House Decorators to her Majesty. Ten parts at 3s.; or in boards, 32s.

THE HOUSE PAINTER, or DECORATOR'S COMPANION: containing a complete Treatise on the Art of House Painting, Graining, and Marbling; including the Origin of Pigments, the Laws of Harmonious Colouring, the Manufacture of Pigments, Oils, Varnishes, &c. By M. HOUGHS, Esq. Accompanied by Practical Specimens of Hand-Brush Graining and Marbling. Ten parts at 3s.; or in boards, 32s.

THE ENGINEERS' and MECHANICS' ENCYCLOPÆDIA, a new and enlarged edition, comprehending Practical Illustrations of the Machinery and Processes employed in every Description of Manufacture of the British Empire. Illustrated by upwards of 2,000 Wood Engravings. By LUKE HERBERT, Civil Engineer, &c. The rapid progress of Mechanical science has developed several of the important facts since the first publication, in 1836, of the Encyclopædia. The Inventions and discoveries recently made have claimed the sedulous attention of the Editor; for, as the value of each is illustrated by experiment, a description was accordingly prepared. By the selection of new articles, and care in the revision of old ones, this work has now become systematically enriched; so that it may be regarded as fully and faithfully expressing "the existing state of Engineering and Mechanism, adapted to the wants of Practical Men." In two Supplemento volumes, cloth lettered, price 30s.

On 1st of October, price 1s. 6d. No. CLVIII. (CXXII New Series) of THE ECCLESIOLOGIST. Published under the superintendence of the Ecclesiological Society.

Particulars may be had of the Architect, Mr. H. CURREY, 4, Lancaster place, Strand, W.C.; or at the Offices of the Society, 18, New Bridge street, Blackfriars.

EDWARD CHATFIELD, Managing Director.

A PIECE of GROUND WANTED, to PURCHASE or RENT on long lease, not less than 180 feet by 160 feet, within half a mile of the South Kensington Museum, for establishing head quarters for the 1st Middlesex Engineer Volunteers. Ground with old buildings would not be objected to.—For particulars apply to Major HARVEY, 71, St. George's-road, Pimlico, S.W.

ELIGIBLE FREEHOLD BUILDING LAND, in KENT, within one mile of two stations on the North Kent Railway, and thirty minutes ride thence to London Bridge and Cannon-street.—TO BE LET or SOLD, in large or small plots, from TEN to TWENTY ACRES of MEADOW LAND, on the high London road to Erith, admirably adapted for gentlemen's residences and villas, delightfully elevated, with fine views of the county and River Thames, near a church, gravelly soil, good water and gas laid down. Ground rent moderate.—Apply to Mr. DAVENPORT, Land and Estate Agent, 35, Bucklersbury, City, E.C.

GROUND in BASINGHALL-STREET, now occupied by Houses and Warehouses, known as Nos. 20 and 21, Basinghall street, TO BE LET by TENDER, for Building purposes. A plan of the ground and form of Tender may be obtained at the Offices of EDWARD PANSON, Esq. No. 70, Lawrence Pountney-hill, Cannon street; or of Messrs. HOLLINGSWORTH, TYERMAN, & GREEN, No. 24, Gresham street, London.; where Tenders, under seal, are to be delivered on or before the 14th OCTOBER next. The Owner does not bind himself to accept the highest or any Tender.

BUILDING LAND, UPPER NORWOOD, close to the Crystal Palace, TO BE LET, for the erection of small Villas, a class of residence much needed, and certain to let before completed. Advances if required.—Apply to Mr. T. K. GREEN, Architect, 25, College hill, Cannon-street, E.C.

BUILDING LAND, EALING.—TO BE LET, in PLOTS, direct from the Freeholder, for Villas. This estate is within 100 yards of a Station, at which more than 50 trains stop daily, and abutting on the high road. Its most important feature is, that on completion of the Railway the extension of the Metropolitan Railway, this site will be actually within half an hour of the Bank of England. The subsoil is gravel, and the roads and sewers are made. Particulars of Messrs. GRAY & BERRY, 105, Edgeware-road; or Mr. JONES, Architect, Ealing, W.

TO BUILDERS.—BUILDING LAND, Wandsworth Common.—ELIGIBLE FRONTAGES TO BE LET, where there is a great demand for houses. Advances made if required.—Particulars to be had by applying to Mr. C. W. TODD, 14, Blessington road, Lee, Kent.

BUILDING GROUND.—Three Acres at Regina-road, Tollington Park, near a Railway Station, TO BE SOLD or LET upon Building Leases.—Apply to Mr. ADAMS, 9, Arthur street, West, London Bridge.

CEMENT TRADE.—WATERSIDE PREMISES REQUIRED, adjoining the River Thames, consisting of Wharf, Warehouse, Counting House, and Stables, in or near London.—Address, ALPHA, at Mr. Beck's, Stationer, 81, Cheapside.

CITY of LONDON.—FREEHOLD BUILDING LAND.—The site of two houses at the corner of College-hill and Cloak-lane (land-tax redeemed), TO BE LET by the Worshipful Company of Cutlers on a BUILDING LEASE for eighty years. Tenders to be sent to Cutler's-hall, Cloak-lane, on or before MONDAY, the 2nd of NOVEMBER, 1863.—For further particulars apply to Messrs. BEAUMONT & THOMPSON, Solicitors, 19, Cecil-street, Strand.

Fields, or Messrs. TRESS & CHAMBERS, Architects, 27, Queen street, Cheapside.

THAMES BANK, PIMLICO.—Very extensive PREMISES, with a private Dock entering from the Thames, suitable for a Builder's establishment or a large Factory, TO BE LET, on LEASE, for a long term, at a moderate rental.—Apply to Messrs. SCURRY & WRIGHT, Surveyors, 6, Salisbury-street, Strand, W.C.

BUILDING GROUND, Milk Street, Cheapside.—Notice is hereby given, that the Committee for Letting the City's Lands will meet at Guildhall, on WEDNESDAY, the 14th OCTOBER next, at ONE o'clock precisely, to receive PROPOSALS for a BUILDING LEASE for 80 years of a piece of ground on the east side of Milk-street, Cheapside, in the City of London. A plan of the ground may be seen, and forms of Tender obtained, upon application at the office of the City Architect, Guildhall.

FERDINAND BRAND, Comptroller.

Guildhall, 24th September, 1863.

TO BUILDERS, CONTRACTORS, and OTHERS.—MAINDIFF COURT ESTATE, near Abergavenny. Several PLOTS of FREEHOLD LAND (part of the above mentioned estate) are TO BE SOLD, or LET on BUILDING LEASES, for the erection of first class villa residences. This estate affords superb sites for houses, commanding beautiful prospects of the adjacent mountains, and part of it will be divided into convenient pieces of land ranging from four to eight acres each, to be let, at moderate ground rents, or to be sold. Good family houses, with land attached, are in great demand in the neighbourhood. This estate is situate within the mile of the town of Abergavenny, on the turnpike-road leading to Monmouth.—For further Particulars and cards to view, apply to Messrs. GABB & WALFORD, Solicitors, Abergavenny.

TO BUILDERS and WINDOW-GLASS MERCHANTS.—Messrs. GILBERT & CO. 2, Gutter-lane, City, have on SALE FIFTY CASES BELGIAN CATHEDRAL 21 or 26 oz GLASS, at exceedingly low price.

Assistant Secretary.—John J. Broomfield.

Insurances against Loss by Fire are effected by the Phœnix Company upon every description of Property, in every part of the world, on the most favourable terms.
The promptitude and liberality with which its engagements are always met by this Company are well known, and the insurance of its clients with the public may be estimated from the fact that since its establishment it has paid more than Eight Millions Sterling, a large share of Claims for Losses by Fire.
Insurances with this Company expiring at Michaelmas must be renewed within fifteen days thereafter, or they will become void.
Receipts are now ready at the principal Offices, Lombard-street and Charing-cross, and with the respective Agents throughout the United Kingdom.

N.B.—Every Description of the Building Goods of the Trade always in Stock.

DURABILITY of GUTTA PERCHA
TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving public the following letter FROM SIR RAYMOND CARVIS, Bart. VENNOR, ISLE of WIGHT. Second Testimonial:—"March 19th, 1862. In reply to your letter received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state with much satisfaction it answers perfectly. Many builders and others here have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am pleased to find that it is to be adopted generally in the houses that are being erected here."
N.B. From this testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES,

N.E. Ex. means Exceeded.

SUMMARY OF THE ABOVE.

In 1 instance the breaking strain required on the 1¼-inch square (viz. 260 lb. was under 300 lb.
In 3 " " " " was between 300 and 400.
In 10 " " " " " 400 and 500.
In 27 " " " " " 500 and 600.
In 38 " " " " " 600 and 700.
In 63 " " " " " 700 and 800.

142

In 142 instances only 10 per cent. broke under a strain less that 500 lb.; 2½ per cent. less than 400; and ¾ per cent. (one solitary case) less than 300 lb.

BY HER MAJESTY'S ROYAL LETTERS PATENT.

CLARK & CO. PATENTEES,

And Manufacturers to the Honourable Board of Works,

15, GATE STREET, LINCOLN'S INN FIELDS, LONDON.

CLARK'S Patent Self-Coiling Steel Shutters, 3/6 per Foot.

CLARK'S Patent Self-Coiling Wood Shutters, 2/6 per Foot.

5*, Pall-mall, September 17th, 1863.

Gentlemen,—In reply to your letter of this day, I have not the slightest hesitation in stating that I think your Patent Steel Revolving Shutters possess every necessary qualification, viz. security, ease in working, &c. The Patent Revolving Shutters you have fixed under my direction at the Head Office of the London and County Bank, Lombard-street, and at their branches in Oxford-street, Uxbridge, Epsom, Bayswater, Hastings, Brighton, Chatham, Dartford, have in each case given great satisfaction.

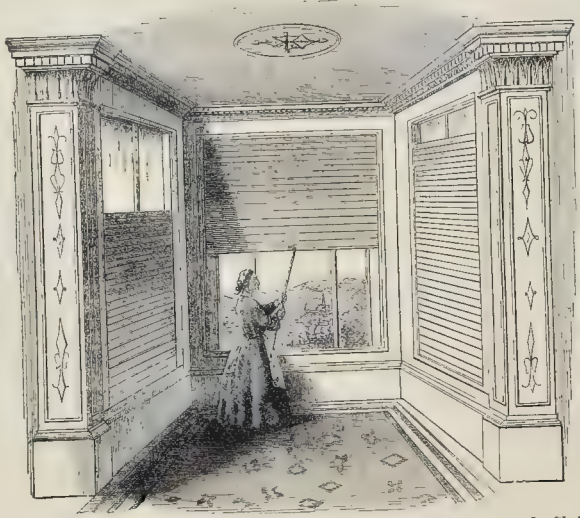
I am, yours, &c.

Messrs. Clark & Co. Gate-street. C. O. PARNELL, Architect.

St. George's-square, Portsea, July 9th, 1863.

We are perfectly satisfied with the working, &c. of your Patent Steel Shutters fixed by our direction at the Hampshire Bank, Landport; and having on several occasions used your Patent Steel Shutters, find that they are extremely simple in action, and afford every security. You are at liberty to make use of this.

We are, yours truly,



Messrs. Clark & Co. RAKE & RANWELL, Architects.

1, Lonsdale-road, Barnes, Surrey.

Gentlemen,—I certify that your Patent Self-Coiling Wood Shutters, which you have fitted to the seven shops at Holloway-road, measuring 1,300 feet, have met my approval, the appearance and working of the shutters being very satisfactory, some of them 10 feet by 11 feet 6 inches, containing 114 superficial feet, being easily worked by hand without machinery.

I am, yours, &c.

Messrs. Clark & Co. THOS. ALLOM, Architect.

Staff College, Sandhurst, Sept. 18th, 1863.

Gentlemen,—I beg to inform you that your Patent Self-Coiling Shutters, fitted here, answers very well, affording a simple and secure mode of closing the windows.

I am, &c. WM. NAPIER.

These Shutters are Manufactured solely by the Patentees, Messrs. CLARK & CO. and are the only Shutters made that do not require Machinery or Gearing Apparatus, while the cost is nearly the same as the ordinary Lifting Shutters.

Architects should be particular in specifying for CLARK & CO.'S Patent SELF-COILING SHUTTERS, as other parties are endeavouring to introduce a Spurious Article.

INTERNATIONAL EXHIBITION, 1862. CLASS 10, No. 2268.

The only MEDAL for "STONEWARE PIPES" has been awarded to

HENRY DOULTON & CO., LAMBETH.

Extract from Jurors' Report:—

"H. Doulton & Co.—Stoneware Pipes, &c. excellence of manufacture and lowness of price."

GLAZED STONEWARE DRAIN PIPES, TERRA-COTTA CHIMNEY TOPS, &c. &c.
Supplied on the lowest terms, direct from

H. D. & CO.'S MANUFACTORIES, HIGH-STREET, LAMBETH, LONDON;
ROWLEY REGIS, STAFFORDSHIRE; and SMETHWICK, near BIRMINGHAM.

HENRY DOULTON AND CO.'S

PATENT COMBINED SMOKE AND AIR FLUES.

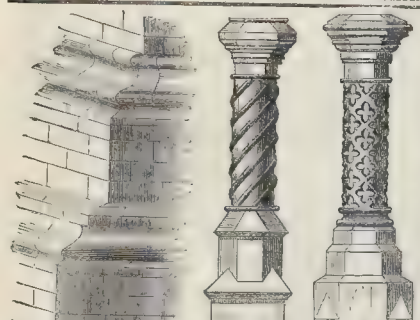
BY THIS INVENTION PERFECT DRAUGHT AND COMPLETE VENTILATION CAN BE SECURED.

The air-flue follows the line of the smoke-flue, the passages being quite distinct. The heat from the smoke-flue causes a current, which carries off the vitiated air admitted by junctions near the ceiling. The pipes or blocks are *all made to bond with ordinary brickwork.*

Where the blocks come together, each air-flue has a lip or projection, which enters the next block and completely shuts off the air-flue from the smoke-flue at the joint. This lip, with dowels at the opposite corners of the blocks, also holds the lengths firmly together.

Curves are made to suit any inclination.

Manufactured in terra cotta for smoke-flues equal to 12 in 10 in. and 8 in. diameter, with ventilating-flues of proportionate size.



Small models will be forwarded to architects on application to
Henry Doulton & Co. High-street, Lambeth

DOULTON'S PATENT OPERCULAR PIPES.

By the introduction of one of these Pipes, at intervals, with ordinary Socket Pipes, Drains can be examined and cleansed. The Cover, being fired in one piece with the Pipe, fits perfectly. There are no imperfect joints, or complication of parts.

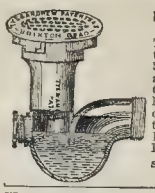
Manufactured by HENRY DOULTON & CO. LAMBETH.
MANUFACTORIES—LAMBETH, LONDON; SMETHWICK, near Birmingham; and ROWLEY REGIS, STAFFORDSHIRE.

BRICK & TILE WORKS,
INGATESTONE,
ESSEX.

ALFRED TUCK has on Sale a great variety of Moulded Bricks, adapted for ECCLESIASTICAL and DOMESTIC ARCHITECTURE, selected from existing examples of Ancient Brickwork.

The patterns are numerous, and suited for Door and Window Jambs, Mullions, Transoms, Tracery, Cornices, Mouldings, String-Courses, Chimney-Shafts, Bases, Parapets, Gables, Finials, and Copings.

Plain Tiles, Pantiles, & Ridge Tiles.

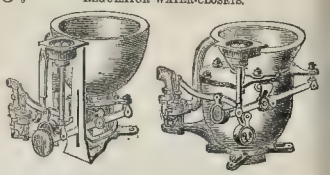


CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage. 3rd. It effects a saving of half the lumber usually required. 4th. It can be easily applied by any laborer and person.—5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small—6th. Under slate, metal, or tiles, it is a most effective non-conductor.

INODOROUS FELT, for lamp walls and floors under carpets and floor cloths. Price ONE PENNY per Square Foot.
CROGGON and CO.'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c and
DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.



Samples, testimonials, and full instructions, on application to
CROGGON and CO. 2, DOWGATE-HILL, London; and 2, GOREE PIAZZA, Liverpool.

TYE & ANDREWS' NEW PATENT SINK TRAP is universally admitted to be the only perfect Trap for Sinks in Domestic Dwellings, as fixed at the principal Institutions. Among others, Wellington Barracks, Royal College of Surgeons, &c. &c. Prospectuses on application to the Patentees, TYE & ANDREW, Brixton-road.

SUPPLIED BY ALL LEAD MERCHANTS AND IRONMONGERS.

J. TYLOR & SONS' PATENT REGULATOR WATER-CLOSETS.

Valve. Pan.

The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is insured. Any number can be worked by one supply-pipe. No system-valves, cranks, or wires required. The Closets can be seen in action at the Manufactory, and Illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate-street, London.

INTERNATIONAL EXHIBITION, 1862.
CLASS 33, NO. 6849.

3s. 9d.

The ONLY MEDAL "for STONEWARE" has been awarded to DOULTON & WATTS, LAMBETH POTTERY, LONDON.

In expectation of a greatly increased sale, D. & W. have determined to introduce the sanitary pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.

Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness, it cannot be surpassed by the most expensive closets.

FIGURE "D" STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

UNDERHAY'S PATENT REGULATOR CLOSETS for constant or intermitting supply, dispensing with Cisterns, Service Boxes, Valves, Levers, Cranks, &c. &c. Much time is saved in fixing, and a better flush of water obtained in use.

Pan, Valve, Self-acting, and Servants' Closets on this principle, may be seen at the Works. They are very cheap, their efficiency is guaranteed, 50,000 of them have been sold, and no instance of failure has occurred.

TO ARCHITECTS, BUILDERS, PLUMBERS, &c.

In consequence of the BANKRUPTCY of the late firm of C. BOTTEN & SON,

F. G. UNDERHAY

now manufactures on HIS OWN ACCOUNT his Patent Regulator Water-Closets, Valves &c. Meters, &c. on the same principles.

Camden-town.

OLD STREET ROAD.—Freehold Houses and Ground Rents, including the New Tariff public house and Twelve other Houses and Shops; the whole producing a Rental of about £614 in eight lots.

MR. PHILIP D. TUCKEIT is instructed to SELL by AUCTION, at the MART, Bartholomew lane, London, on TUESDAY, the 27th of OCTOBER, 1863, at eight lots, a very desirable FREEHOLD PROPERTY, including the Dwelling Houses and Shops Nos. 39, 40, 41, and 42, Old Street road, and Nos. 7, 8, and 9, Boot street, in the Parish of St. Leonard, Shoreditch; let to respectable tenants at very low rents; an ample annual RENT of 125*l.* per annum, arising out of that well accustomed public house known as The New Tariff, and three adjoining houses; together with the REVERSION of the above valuable property after an unexpired term of forty-nine years; and a GROUND RENT of 14*l.* per annum, arising out of Nos. 3 and 4, Boot-street, producing a rack rental of 91*l.*—Part only, with plans and conditions of sale, may be obtained at the Mart; of Messrs. POOLE & GAMBIER, Solicitors, 3, Grey's Inn-square; and of Mr. PHILIP D. TUCKEIT, Land Agent and Surveyor, 76, Old Broad-street, E.C.

TWICKENHAM and TEDDINGTON.—Valuable Building and Accommodation Land, desirably situate in the picturesque district near to Strawberry Hill, and adjoining upon the Road leading from Twickenham to Teddington and Bushy Park, and within half an hour's journey of London by railway

MESSRS. DRIVER will SELL by AUCTION, at the MART, near the Bank of ENGLAND, on TUESDAY, OCTOBER 20th, in six lots, about TWENTY ACRES of valuable BUILDING LAND. The property is partly Freehold and partly Copyhold, commanding good views, is within short distances of Twickenham, Teddington, the river Thames, Hampton Court, Bushy Park, and other attractive features of this favourite and now accessible locality, and is in every respect suitable for the erection of villa residences. Printed particulars and plans may be obtained at the chief inns at Twickenham, Richmond, Teddington, Hampton, Hampton Court, and King-ton; at the Auction Mart, London; of Messrs. NEW, FRANCIS, and GARRARD, Solicitors, 3, Bedford-row; and of Messrs. DRIVER, Surveyors, Land Agents, and Auctioneers, 4, Whitehall, London, S.W.

VALENCIA SLATE SLAB QUARRIES, COUNTY KERRY, IRELAND.

MESSRS. FULLER & HORSEY are instructed to SELL by AUCTION, at the AUCTION MART, London, on WEDNESDAY, OCTOBER 28 at TWELVE, in one lot, unless an acceptable offer be previously made by private contract, the extensive QUARRIES and MILLS of the VALENCIA SLATE SLAB COMPANY, situate in the Island of Valencia, County Kerry, Ireland. The works have been carried on by the present company for about fourteen years, and a very large outlay has been made in opening the quarries, and in erecting mills and the requisite machinery. The quarries are situate on the side of a mountain, about 420 feet above the sea level, and an opening has been made for working about 120 feet wide, running into the mountain to about the same depth, uncovering a succession of platforms of slates of various widths. The slate rock lies most conveniently for working, at an angle of about 35 degrees, and has a regular cleavage. The slabs are severed by wedges instead of by blasting, thus avoiding the large amount of waste occasioned by the latter process. The roof of the quarry is self-sustained, and is perfectly secure. The quality of the slate is now well known and appreciated, and are taken in large quantities by the principal merchants in London and elsewhere. They take a beautiful permanent polish, are particularly valuable for out-door using, are unaffected injuriously by furnace heat, and are sawed in larger sizes than from any other quarry. The way to from the slab blocks is made over roadway slabs, for which there is ample local demand. The present vield is about 400 tons of slate slabs annually, but by a comparatively small outlay in an extension of the workings this quantity may be doubled, the machinery at the mills being equal to perform that quantity, and the demand at the present time being in excess of the capabilities of supply. The mills are situate about 2½ miles from the quarries, are connected by a good road of easy descent, which is kept in repair principally at the expense of the country; but it is believed that every facility would be afforded by the Knight of Kerry for the formation of a tramway down a tramway by the side of the present road, which would much lessen the cost of transit. The mills are at all times ready to shipped, being almost adjoining the pier, at which vessels of 500 tons burden can load alongside, and there are no port dues nor wharfage per ton. The harbour of Valencia is safe and commodious, and perfectly accessible at all times except in the winter months. The buildings are well planned, and substantially erected. They are fitted with saws and planing machinery of the best description, fitted by Messrs. Bentley, Shannon, and Hanbury, and erected, framed, and every appliance for saving in hand is. There is a plentiful supply of water for the purposes of the mills, from a large reservoir. The premises, with the slate quarries, are held under an agreement for lease from the Knight of Kerry, for a term of fifty seven years from 1st January, 1861, terminable at the lessee's option on giving six months' notice. The lease, a draft of which may be seen prior to the sale at the Offices of the Vendor's Solicitors, will be granted by the Knight of Kerry direct to the purchaser. The present Company have expended £10,000 upon the property. They have a good connection in establishing the reputation of, and a market for, the slabs, and are thoroughly prepared for extensive and uniform character of their supplies. Should the whole not be taken, they are prepared to dispose of the mills and machinery separately, with the residue of the power, very profitable sales may be anticipated.—The Works may be viewed by Cards only, which, with further particulars, may be had of Messrs. PARKER, SHEPHIP, & ELAND, Solicitors, 4, Trafalgar-square, W.C.; at the *Midland Counties Hotel* Offices, Birmingham; at the Great Northern Hotel, Peterborough; at the Railway Hotel, Kilburn; at the Adelphi Hotel, Liverpool; at the Mart, London; and of Messrs. FULLER & HORSEY, 11, Billiter-street, London, E.C.

HOLBORN.—Most important Leasehold Property, comprising the well known Old Kent Tavern, in Brownlow-street, Holborn, with the Goodwill attached (established upwards of 100 years), No. 41, High Holborn, nearly Opposite Chancery-lane; Nos. 6 and 6, Warwick-place, Bedford-row; and a large space of vacant Building Land in the rear, the whole occupying an area of about 15,970 square feet.

MR. BRAY, Jun. is favoured with instructions from the Proprietor to SELL by AUCTION, at the MART, on THURSDAY, OCTOBER 8th, 1863, at TWELVE, the above-named Valuable LEASEHOLD PROPERTY, comprising numerous advantages for entering into, all fully described in particulars of communication from each of the frontages to the Building ground in the rear, which is a most eligible area of about 12,000 square feet, a space offering an opportunity for the erection of a music hall, gymnasium, theatre, or place of public entertainment in connexion with the several premises, and is in the centre of the most leading thoroughfares of this great metropolis. Plans of the estate will accompany the particulars and conditions of sale, which will be ready for delivery in a few days after the sale may be had at the old Kent Tavern; of Messrs. THOMSON & SON, Solicitors, 71, Cornhill, E.C.; of Mr JOSEPH LAVENDER, Architect, 26, Bedford-row, W.C.; at the Mart; and at the Offices of the Auctioneer, 16a, Basinghall-street, Bedford-row, W.C.

84, BERMONDSEY NEW ROAD.—To CONTRACTORS, ENGINEERS PUMP MAKERS, WELL SINKERS, &

NOTICE

BROWN & GREEN'S KITCHEN RANGE WAREHOUSE will shortly be REMOVED to the NEW PREMISES, 72—77, Bishopsgate street Within, a few doors from the present establishment. These Premises afford ample room for a still larger stock of their Patent Prize Metal Ranges and Stoves, Register Grates, and Cooking Utensils, to meet the great public demand; and also for the execution of more extensive orders, by the manufacturing machinery, of all descriptions of hot water, bath, laundry, and kitchen work.

81, Bishopsgate street Within, July, 1863.

CONTRACTS.

WAR DEPARTMENT CONTRACT.—NOTICE to BUILDERS.—TENDERS are required for the ERECTION of a WASHHOUSE and LAUNDRY for the Married Soldiers' Quarters, in Charlton Common.

Plans required to render the execution of these works most leave their names at this Office on or before the 22nd day of OCTOBER, 1863, stating the sum of the Tenders and number of the Bricks Quantities, which will be forwarded to each party as soon as prepared by the Government Surveyor.

The Secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, Woolwich, October 7, 1863.

TO CONTRACTORS.—In consequence of the Death of the late Contractor, Sealed TENDERS will be received by the Secretary of the Bridge Committee of the Town of the Sheds, from the date hereof up to and upon THURSDAY, the 29th day of OCTOBER next.

For taking down the present Bridge over the River Boyne, at Drogheda, and Building in place thereof a Stone Bridge of Eighty Feet Span.

According to Plans and Specification prepared by J. NEVILLE, Esq., C.E. to be seen at my Office, Fair street, Drogheda, or at the Office of the Engineer, Dean's street, Dublin, between the hours of TEN and FOUR o'clock every day (Sundays excepted) after this date. The Lowest or any Tender not necessarily to be accepted.

Dated at Drogheda, this 24th day of August, 1863.

HENRY CLINTON,

Secretary to the Bridge Committees of the Corporation Harbour Commissioners and Grand Jury of Drogheda.

TO BUILDERS.—Persons willing to TENDER for the whole or any part of the WORKS required for the ERECTION of a NEW RESIDENCE at Tapton Park, near Sheffield, may see the plans and specifications at and after MONDAY next, when further particulars will be furnished. Mr. M. E. HADFIELD, Corn Exchange Chambers, Sheffield, from whom all further particulars may be had. Tenders to be delivered not later than the Office hours on the 16th OCTOBER, 1863. No pledge is given to accept the lowest or any Tender.

BOARD of WORKS, WHITECHAPEL DISTRICT.—A meeting of this Board will be held on MONDAY, the TWELFTH day of OCTOBER, 1863, at SIX o'clock in the evening, at the Office of the Board, No. 1, Great Alie street, Whitechapel, to receive TENDERS for PAVING the portion of the Whitechapel Road (extending from Great Garden street to the eastern boundary of the district, in the middle one, with the materials particularly described in the specification prepared by the direction of Mr. Peter Ree, the Surveyor to the Board, between the hours of ELEVEN and FOUR o'clock, of whom forms of Tender can be obtained. All Tenders must be delivered at the Office previous to the hour of meeting, and any Tender which is not upon the form prepared by the Board, and signed by the person or persons tendering, will be rejected. Persons tendering, or their Agents duly authorized, are required to attend the meeting of the Board. The Board do not bind themselves to accept the lowest or any Tender.

ALFRED DUTTON, Clerk to the Board.

19, Great Alie-street, Whitechapel, 1st October, 1863

THE OLD MATERIALS of the PORTMAN BARRACKS FOR SALE. TENDERS by the 13th inst. Apply to Mr. BARLOW, 11, Portman street, W.

TO BUILDERS, ROAD CONTRACTORS, and OTHERS.—Persons desirous of CONTRACTING for the FORMATION of a WHARF and BRIDGE, and for the IMPROVING of a ROAD on the Estate of the Carpenters' Company at Stratford, Essex, may inspect the plans and specification at the Office of the Architect W. W. TOOKE, 5a, Gravenstreet, Strand, where TENDERS are to be delivered on the 19th instant, at THREE o'clock, p.m. The Company do not bind themselves to accept the lowest or any Tender.

CONTRACTS.

LANCASHIRE and YORKSHIRE RAILWAY.—The Directors are prepared to RECEIVE TENDERS for the IRON GIRDERS of the BRIDGES for the Extension from Salford to Victoria Station, Manchester. Drawings may be seen, and forms of Tender obtained, at the Fine Arts Office, Hunt's Bank, Manchester, on and after the 5th OCTOBER next, and Tenders, properly endorsed and addressed to the Directors, must be in the hands of the undersigned not later than MONDAY, the 26th OCTOBER instant.—The Directors do not undertake to accept the lowest Tender.

WM. S. LAWN, Secretary.

Manchester, 1st October, 1863.

WEST LONDON UNION.—ERECTION of NEW WORKHOUSE.—The Guardians do hereby give notice, that of the Plans and Designs sent in for Competition, they have selected, as the first, second, and third best, those bearing the mottoes of—

"Hon" ..... 1st prize.
"Honesty is the best Policy" ..... 2nd ditto
"Experience" ..... 3rd ditto

And gentlemen who have, therefore, unsuccessfully competed, are hereby informed that their Plans and Designs will be returned on an application being made at my Office between MONDAY, the 12th, and THURSDAY, the 29th day of OCTOBER instant, and between the hours of ELEVEN in the morning and TWO in the afternoon.—By order,

JOHN PONTIFEX, Clerk to the Guardians.

5, St. Andrew's-court, Holborn, October, 1863.

WEST HAM LOCAL BOARD of HEALTH.—Notice is hereby given, that the Board of Health for the District of West Ham, in the county of Essex, are prepared to receive TENDERS for the ERECTION of TWO COTTAGES, on their land at Canning Town, adjoining the Sewerage Outfall Works. Contract Drawings, forms of Tender, and any other information may be obtained at the Office of the Local Surveyor, at Rokeby House, in Stratford, E. between the hours of TEN and TWELVE o'clock. Tenders are to be delivered at my Office, at Rokeby House, in Stratford, not later than MONDAY, the 26th instant; and each of them must contain a Ten Pound Bank of England Note, endorsed by the party tendering, to be returned in the event either of the Tenders not being accepted, or on the completion of the contract bond.—By order of the Board,

CHARLES WILSON, Clerk.

Rokeby House, Stratford, E. October 14th, 1863.

GREENWICH UNION.—TENDER for COOKING APPARATUS.—The Guardians of the Greenwich Union are desirous of receiving Sealed TENDERS from persons willing to CONTRACT for SUPPLYING and ERECTING APPARATUS for COOKING by STEAM (with boilers, furnaces, and other requisites) for the service of the new kitchen now in course of erection at the Union House, Woolwich road, Greenwich.—Information as to the required capacities, and other details, may be obtained on application to Mr. R. P. BROWNE, Architect, 33, Clement's lane, London, or Royal Hill, Greenwich. Each Tender must be accompanied by a drawing and description of the apparatus and its appurtenances, and a detailed specification of the works to be performed and the materials to be used in constructing and fitting up the same. All Tenders to be sent by or addressed to the undersigned, and endorsed, "Tender for Cooking Apparatus," and delivered at the Clerk's office, Union House, Greenwich road, on THURSDAY, the 15th OCTOBER instant, on or before FIVE o'clock on THURSDAY, the 15th OCTOBER instant, on which day the same will be opened at a meeting of the Guardians; and the persons tendering, or their authorized agents, must be in attendance at that day at FIVE p.m. The lowest or any other Tender will not necessarily be accepted.—By order,

SAMUEL SAW, Clerk to the Guardians.

Greenwich, S.E. October 1, 1863.

GREENWICH UNION.—CONTRACT for DRYING STOVES.—The Guardians of the Greenwich Union are desirous of receiving Sealed TENDERS from persons willing to CONTRACT for the CONSTRUCTION of TWO WROUGHT IRON DRYING STOVES (with slides, rollers, flues, and a side stove to each for drying rooms) in the Laundry of the Union House. Further information as to the required capacities may be obtained on application to Mr. R. P. BROWNE, Architect, 33, Clement's lane, London, or Royal Hill, Greenwich. Each Tender must be accompanied by a drawing and description of the apparatus and its appurtenances, and a detailed specification of the works to be performed and the materials to be used in constructing and fitting up the same. All Tenders to be sent by or addressed to the undersigned, and endorsed, "Tender for Drying Stoves," and delivered at the Clerk's office, Union House, Woolwich road, Greenwich, on THURSDAY, 15th OCTOBER instant, on which day the same will be opened at a meeting of the Board, and the parties tendering, or their authorized Agents must attend the Board on that day at FIVE o'clock. The Guardians do not bind themselves to accept the lowest or any Tender.—By order,

SAMUEL SAW, Clerk to the Guardians.

Greenwich, S.E. October 1, 1863

TENDERS are invited for 346 Tons, more or less, of CAST IRON PIPES, for the Justices of the Peace for Calcutta.—Particulars and specifications may be obtained from Messrs. W. THACKER & CO. 87, Newgate street, E.C.

The Local Board do not bind themselves to accept the lowest or any Tender.
ROBERT GROWSE, Town Clerk.
Hastings September 28, 1863.

TORQUAY HOTEL COMPANY (Limited).
TO BUILDERS.—The Directors of the Torquay Hotel Company (Limited) are willing to receive TENDERS for an HOTEL to be ERECTED on The Town Pleasure Ground, from the designs of the Architect, E. N. CLIFTON, 17, St Helen's place, Bishopsgate street, London. Copies of the quantities may be obtained of Messrs WILLIAMS & SCHOFIELD, 15, Modena street, Russell square, London, W.C. on application with the sum of five guineas which will be returned after the delivery of the Tender. The Directors do not bind themselves to accept the lowest or any Tender. The Directors will require the Builder whose Tender is accepted to give the names of two sureties, to be bound jointly with himself in the sum of 3,000l. for the due execution of the works. By order of the Board,
E. N. CLIFTON, Architect of the Company.
17, St. Helen's place, Bishopsgate street, London,
7th October, 1863

CROYDON LOCAL BOARD of HEALTH.
TO DUST CONTRACTORS and OTHERS.—Any person willing to CONTRACT for the REMOVAL of the ASHES and all other RUBBISH and REFUSE now or that may accumulate from the houses and roads in the special district of the town of Croydon, may see the specification, at the Vestry Hall, between the hours of TEN and FOUR o'clock. Tenders to be delivered at the Office of Mr H. RICHARDS, 26, High-street, Croydon, on or before MONDAY, the 19th of OCTOBER instant, endorsed "Tender for Refuse." The Board will not be pressed to accept any Tender. H RICHARDS, Clerk.

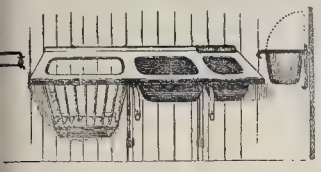
THE PRIZE MEDALS

(LONDON, 1851. PARIS, 1855. LONDON, 1862)
Awarded to

COTTAM & COMPANY,

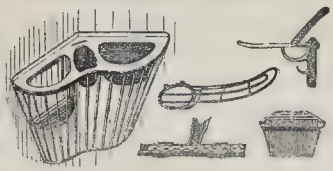


2, WINSLEY STREET, LONDON, W.

For progressive and general improvements in

STABLE FITTINGS AND HARNESS BRACKETS.

Awarded a prize at the Paris Exhibition,
patronized by the English and French Governments, as well as by the principal Nobility, Gentry, and Hunting Establishments in the Kingdom.
In use at her Majesty's Stables, Aldershott and Balmoral.



COTTAM & COMPANY, Winsley-street, W. are the original Inventors of the PATENT ENAMELLED MANGER, Water trough, and Wrought Iron Rack, united in one non-corrosive, and forming one complete and useful fixture, having COTTAM'S Patent Noiseless Halter Ring and Collar Rein attached, which is taken to the back of the manger, and works with ease and freedom up or down the gutter-bar.

COTTAM'S NEW PATENT SEED BOX, an important addition to the above fittings, being simple in construction, light, and durable, from its self-acting use, and is economical in its results.

COTTAM'S PATENT PERMANENT ATTACHED DROP COVER, for use at Races, as a most essential solution to their defence; it is never lost, is always ready to be raised and replaced in an instant; while its compactness, simplicity, and utility in keeping the contents of the bucket clean, and regulating the quantity to be taken, is quite sufficient to ensure its use.

COTTAM'S PATENT SADDLE AND HARNESS BRACKET COMBINED

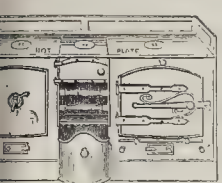
e used with great advantage where space is an object, as it can rned up out of the way when not in use.

TTAM'S IMPROVED WROUGHT-IRON VENTILATING CKET preserves the shape and allows a free admission of air to nder parts of the sweat.

TTAM'S IMPROVED SURFACE CUTTER, with perforated able cover, the use of which prevents accidents, and can be easily ed out.

TTAM'S CAST-IRON SANITARY TRAP, from its improved ruction, gives a full water passage, and does not allow any smell send from the drain.

TENT LOOSE BOX FITTINGS, and every article for the harness- and stable, kept in stock, plain, galvanised, and enamelled. ates, fencing, hurdles, &c.



Illustrated Catalogues and Estimates gratis, upon application to

COTTAM & CO. 2, WINSLEY STREET, Oxford Street, London, W.

RE FULL-SIZED STALLS, LOOSE BOXES, AND HARNESS-ROOM, &c. ARE FITTED UP, SHOWING ALL COTTAM'S PATENT IMPROVEMENTS, &c.

COTTAM & CO.'S only address in London, is 2, WINSLEY STREET, W.

VIEILLE MONTAGNE ZINC.

THE ITALIAN-FORMED ZINC is much approved of by Architects and Engineers on account of its strength, durability, and appearance. On account of the light framing required, roofs, including framework and fixing, can be covered with it FOR £3 PER SQUARE up to 25 feet span. Sheds of larger span, including posts, 4*l.* per square. Architects are cautioned against allowing anything thinner than No. 13 gauge (20 oz.) to be used. ALL PLATES SHOULD BE REJECTED NOT BEARING, in addition to the Company's name, the words "ROOFING ZINC," and the gauge.

OLD ZINC RETAKEN AT HALF THE MARKET PRICE OF NEW.

For Designs and Estimates for Roofs, with Timber or Iron Framework, IRON CHURCHES COVERED WITH ZINC, and Buildings for the Colonies, apply to

THE COMPANY'S SURVEYOR,
12, MANCHESTER BUILDINGS, WESTMINSTER, S.W.

JAMES W. TYLER, CONTRACTOR FOR

DEVAUX'S VIEILLE MONTAGNE THICK ZINC ROOFING,

ON IMPROVED PRINCIPLES,

12, ABINGDON STREET, and 4, WOOD STREET, WESTMINSTER, close to Victoria Tower.

Estimates furnished for every description of Zinc Roofing and Guttering, inclusive or exclusive of Timber or Iron Framing, in all parts of England.

Having for several years been actively employed in laying DEVAUX'S THICK ROOFING ZINC (the purest extant) upon the new principles introduced by Mr. Edmeston, Mr. TYLER can refer with confidence to work done as his best recommendation.

Good Zinc badly laid will still be a failure, for there is much more importance in the mode of laying than is yet generally known; and parties who will intrust their work to Mr. TYLER will find that this important point a thorough attended to, and at no extra cost.

This Zinc is laid as nearly as locality admits level, if the work is arranged according to Mr TYLER'S directions.

GEORGE JACKSON AND SONS
(Established in 1730)

Beg the attention of Architects, Builders, Decorators, and the trade in general, to their large assortment of Enrichments for Ceilings and Cornices, in the Gothic, Elizabethan, Italian, Renaissance, Louis XIV. XV. XVI. and many other styles; also rich and novel Panel Decorations, Elizabethan and Gothic Bosses, Trusses, Column and Pilaster Capitals, executed in the most effective style of art.

The large and well-arranged premises of GEORGE JACKSON and SONS in Accessories of Drawing and Dining Rooms, Libraries, &c., for purchasers of the buildings, many of which they have had the honour of executing under Architects of the highest eminence, enables them to give particular notice to that branch of their business.

Upholsterers are invited to inspect the large variety of Glass Fringes, Tables, Cornices, Screens, Candelabra, &c. The extent of their works, and the recent steam-power and machinery, enable them to offer every article of the best manufacture and speed; while for design, quality, relief, and finish, they flatter themselves they stand unrivalled.

"*Going Along.*"

The Danube. Vienna.

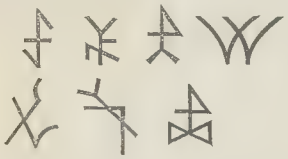
FROM the windows of the very well-conducted "Hôtel de l'Archiduc Charles" at *Linz*, the view of the Danube is beautiful, giving good promise for the voyage to Vienna between its banks. Hills covered with foliage run up from its edge on the opposite side dotted with church and houses, while on the side next the hotel two steamers and some small boats form a foreground. Many of the houses in Linz are very lofty, and have the ground story vaulted with stone,—whether to preserve the upper part from possible inundation, or to cut it off from the shop or store below, is not clear. The height at which they are built above the river almost precludes the former supposition. A stone in the hotel, however, 2 feet 9 inches from the floor, shows where the water once stood in the house, and the level of the river must be 15 feet or 16 feet below the road there. The Great Market Place is not miscalled: it is singularly extensive; and besides two fountains, one at each end, has in the centre what is termed the Column of the Trinity, to commemorate the deliverance of the town, once from the plague and once from the Turks. This wretched taste-perverter, erected in 1723, is intended to represent clouds piled up, sprinkled with angels' heads and saints, and is more suggestive by its forms of goitre and ceretinism than anything else. A fellow traveller calls it all lumps and rolls, like soft sausages. It should be pulled down forthwith. The damage done by such monstrosities is greater than is supposed. By way of antidote, drive out to Jägermier's Hotel, on the hill behind the town, whence Linz itself, the winding river with its island and bridge, the separate round towers which constitute the fortification here, and the Styrian Alps behind,—

> "Where the mountains
> Lift, through perpetual snows, their lofty and luminous summits,"

form a picture of great loveliness. Should evening come on while you are there, the lights of the Beer-hall on the banks, multiplied in the water, and the mist rising from the river and stealing up the mountain sides, will add fresh features to the scene.

The promise made for the Danube at Linz is not broken. In parts the Danube exceeds in beauty the Rhine, though the more striking views are farther apart, so that it scarcely makes the same impression as a whole. Early, the river spreads about in all directions, taking half a dozen separate channels, with small islands in between, and making the navigation difficult through want of water in the stream. At Mauthhausen the toll-house and picturesque private houses adjoining with turrets, are interesting; and then comes the castle of Nieder-Walsee on the rock, with its tall square tower and bell-shaped top, joined to a large modern building. Past Grein, castle crowned, the sides of the river become more mountainous: trees and rocks conjoin. There is a village, with its church, at the foot, and the view all around is magnificent. Other villages and other castles succeed. At Ips, and, indeed, in more places than one, some large buildings are in progress. At Ips a record may be noticed that the water rose up the front of a house 13 feet on the 31st of October, 1787, and 10 feet on the 3rd of February, 1862, the ground on which the house stands being about 4 feet more from the present level of the river. At Mölk stands a stately Benedictine monastery, the walls in part upright with the perpendicular face of the rock. The castle of Aggstein, perched on the rock at a great height above the river, and the castle of Dürrenstein, both strongholds of robber-chiefs in early days, are fine ruins. Mr. Planché, in his graphic "Descent of the Danube," which has supplied the materials for the guide-books since, and is still the pleasantest story of the historic and romantic river, records a tradition connected with the first of these castles, which is truthlike if not truthful. It is said in it that the castle was anciently held by a robber-knight named Schreckenwald, who, after plundering unfortunate travellers on the Danube, thrust them through an iron door over the rocks into a deep abyss, behind the castle, that he called his Little Rose Garden, and from which the chance of escape was next to *nil*. An Austrian proverb still says of a man who is in a great fix, "he is in Schreckenwald's Rose Garden." It is pleasant to hear through the aforesaid tradition, that one of the intended victims did get out of the garden, and that its scoundrel cultivator was hanged. In the castle of Dürrenstein, if not in that of Aggstein also, Richard, the Lion-hearted of England, was imprisoned treacherously by Leopold of Austria, at the end of the twelfth century. Some other castles hereabout claim to have held Richard for a time. Where Blondel sang it seems hard to say. Dürrenstein is magnificently placed, high up at the end of a long range of hills, with cottages below, and jagged peaks of rock around. The ruins of the nunnery of St. Clare here come into the superb picture which the whole forms. Past Stein, and Krems, both picturesque, rises another enormous Benedictine monastery, the monastery of Gottweih, looking more like a small town on the top of the hill than one establishment. The library there is large and curious. After Krems the views become less interesting; but the banks of the river, it should be noticed, are excellently well kept, and in parts where the river spreads, the current is marked out and aided by artificial embankments in the stream. Birch, beech, and willows line the banks. Klosterneuburg is passed, with its towers and church. At Korneuberg we get a picturesque effect. The country people, in grey-coloured dresses, have come down to see the steamer; the red and white flag is floating, and the whole is illumined by the bright sunshine. Soon after, a smaller steam-boat receives the passengers, and runs them up the Danube-canal right into *Vienna*.

The change in this city within the last dozen years is very great. We have heard much at times of the decay of Austria, but Austria can evidently stand a great deal of ruining. The great event for the prosperity of the city was the removal of the fortifications,—not yet completed,—by which a wide belt of land, the glacis, surrounding the city proper, is made available for building, decorative, and recreative purposes, and will unite to the latter the suburbs that extend widely on all sides. On the land thus provided, on the southern side of the city, many large blocks of costly houses, five and six stories in height, have been erected, French in character, with ornamented pilasters and friezes, bay windows, and handsome metal-work. One pile here, opposite to where the new opera-house is being erected, is six stories in height, including mezzanine, has projecting windows at the angles very highly decorated, statues in niches, and so forth. The decorations are, for the most part, in cement and terra cotta, but parts, such as the projecting windows, are of stone. The carving is somewhat blunt on close inspection, but is, nevertheless, agreeable in the whole. Such a block includes a considerable number of residences, with inner courts. The ceilings of the passage-ways are handsomely decorated with colour. The architect was the late Mr. Ludwig Förster, editor of the *Bauzeitung*, a man of knowledge and ability. Close by, another block of residences has been erected from the designs of his son-in-law, Mr. Hansen. This has square turrets at the angles, surmounted by vases, containing aloes, probably of metal painted. The panels between the windows of the top story are decorated with painted figures and arabesques on a gold ground. The rest of the building is of a cement and stone: the wall-surface of the first and second story is of a pale red, the remainder of a stone colour. The windows of the third story have caryatides on each side. The roadways here are very wide, contrasting strikingly with the very narrow and tortuous streets of the city proper, which, moreover, have no *trottoirs*, and where, by the way, the coachmen drive as if the life, or, at any rate, the legs of a pedestrian were not of the slightest consequence. In one of the new roadways, Kärnther Ring, in which stands one side of Mr. Förster's houses alluded to above, two rows of trees, apparently a kind of ash, are planted, one on each side, separating it from the portions appropriated to walkers.



The character of the houses rising up in the new parts of Vienna will be better understood from the view we give of the entrance front of a large house, erected also from the designs of Mr. Förster, on the northern side of the city, in the Jägerzeile, which leads to the Prater.* This structure, built for the Herrn Albert von Klein, extends far back and is of considerable size. It includes shops on the ground story in front. To make the details of the elevation clearer, we add a drawing, showing part of the upper two stories on a larger scale. The ornamental metal work with which it terminates forms the face of the gutter.

On another part of the glacis, of which we were speaking, the Votive Church, often talked about, is being erected, somewhat slowly. It is an edifice of large size (very nearly 300 feet long), and will have two lofty open-work spires at the west end, and a *flèche* at the junction with the transept. It is a reproduction and recombination of Geometric Gothic architecture, and very creditable in that point of view to Herr Heinrich Ferstel, the architect. The parts are rather thin and liny, but it is greatly superior to anything of the kind heretofore done in these days in Austria. We shall give a view of the church in a following chapter of our jottings. Movement is evident in Vienna, and progress, too; and that not only in our speciality, but elsewhere. For example, it is notably seen in the introduction of the English system of banking, by the newly-formed "Imperial Royal Privileged Union Bank of Austria."

Another new building is the Arsenal, an enormous pile, including barracks, armoury, chapel, and storehouses, constructed mainly of brickwork red in colour, with occasional stone dressings; the whole displaying more thought, adaptation to present wants,—in short, more art, than we have elsewhere seen here. It will be judged from what has been said that there is no great architectural genius at present amove in Vienna. We are getting dull, however, amongst the brick and mortar of to-day, and must mix with it a little of the dust of antiquity. Let us run off, if but for a passing glance, "going along," to one of the few buildings in Vienna bequeathed to the world by the Middle Ages, and which we should "not willingly let die." "Whatever makes the past, the distant, or the future predominant over the present raises us in the scale of thinking beings. Within the narrow circle of the present are comprised all our passions, all our appetites, all our selfishness, and all our vices: when you step beyond that circle, when you enter into the domain of the

* See p. 725.

past, of the remote, or of the future, you at once step into the regions of pure intellect, of lofty imaginations, of noble aspirations." Dr. Johnson, eloquent dogmatist, says so, and we will not stop to qualify the assertion, agreeing fully in the leading idea. A walk round, into, and up St. Stephen's, the cathedral church, and literally the centre of the city, expands the mind, raises the aspirations, feeds with thoughts, and spiritualizes, let us say, the beholder. The men of seven centuries ago have left us a bit of their handy work at the west front, and those of the fourteenth and fifteenth centuries, working on and off during 120 years, have given us the main fabric. We hear of Master Octavius Falckner in connexion with the first part of the work, and of Jörg Ochsel and Anton Pilgram as architects, one after the other, of the present church. Underneath the elaborately carved pulpit in the nave is a sculptured bust of a man,* as if looking out from an opening, and at the foot of the corbel that carries a small stone organ-loft projecting from the north wall of the nave near the transept is a second bust. These are both said by some authors to represent Pilgram; but we should rather agree with another writer, who says the bust under the organ-loft is intended for Ochsel, and that under the pulpit for his successor, Pilgram, who designed it. In the hand of the latter is a pair of compasses: the figure under the organ-loft holds a square. The heads, on comparison, are quite different. On the top of the stone parapet of the steps to the pulpit is carved a string of toads, lizards, snakes, and other reptiles devouring each other: there are twenty-nine of them: at the top nearest the pulpit sits a dog. The stonework of the pulpit displays a large variety of masons' marks,—very large considering the smallness of the work. Here are representations of a few of them:—

The enormous scaffolding which has long disfigured the outside of the Cathedral is still up; but is to be removed before long. Within, restoration is going on in the north aisle of the choir, under the architectural direction of Professor Schmidt. The south tower, tapering from soil to summit, and of wondrous height, serves, many will remember, as a station for the fire-watch, who telegraph from it for assistance when a fire occurs. The great bell here is 11 feet in diameter at the mouth. When rung it swings, and is made to strike against the clapper, which also swings. A huge wheel in the roof of the church, caused to revolve by men walking in it, is used to raise from the pavement, 87 feet below, such materials as may be needed in works of reparation or otherwise. The enormous roof is covered outside with coloured tiles; white, buff, green, and brown, forming the Austrian eagle, of large size, and some other designs:—the effect is frightful. These were unhappily renewed, at great cost, in 1831. The external gables over the lofty windows of the south aisle are remarkable specimens of stone tracery, as our readers shall see when our sketch is engraved.

The interior affords some admirable effects. David Roberts's picture exhibited a few years ago, and bought by the late Mr. Thomas Cubitt, will be remembered. This gives somewhat too much of importance to the wide archway at the west end from which the view was taken, and where the archway was made to form the frame. The carved stone canopy on the north side, at the west end near the confessional, with an old man kneeling just under the red awning, his white hair flowing over a sorrowful face, his eyes immoveable, his thoughts unaffectedly far away from all things here, is a picture worth looking at, and might serve as a subject for Mr. Burton. In St. Stephen's are interred the *bowels* of such members of the Imperial family as die; in the Capuchin church, the *body;* and in the church of the Augustines, the *heart* of each member. We mention the curious and revolting arrangement simply that we may point the attention of those interested in metal working to the elaborately ornamented metal coffins in the vaults of the Capuchin church, ranging from 1619 up to the present time. Those of late days are mostly executed by Moll, and show more hand than head. In St. Augustine's is Canova's elegant monument to the Archduchess Maria Christina, of Teschen,—"*Uxori optimæ Albertus.*" The group entering the tomb is particularly fine: the effect of the whole satisfactory. A repetition of this design, with differences, has been erected as a monument to Canova himself, in the church of the Frari, in Venice, but is very inferior. The church of St. Maria Stiegen has a remarkably fine and lofty Gothic altar-piece, including a large canopy over the crucifix, carrying figures also under canopies. The main pillars of the nave have carved figures around them under canopies. In the Graben there is a horrible column of clouds and saints, erected in honour of the Trinity, very nearly as bad as the monstrosity at Linz, and which, like that, should be forthwith pulled down and carted away to any place where rubbish may be shot. A new Gothic church for the Jesuits, near the railway station, is nearly finished, and is a fair reproduction of old forms,—what may be called architecture of the Thoughtless Style. The new synagogue should be looked at, and the modern Greek church, with its painted Iconostasis.

Amongst the private collections in Vienna, that of the Prince de Liechtenstein is prominent. Rubens shines here in a series of pictures illustrating the life of the Roman Decius, and Vandyke in a portrait of Wallenstein and one of himself. A circular "Holy Family," by Raffaelle, differing considerably from any other version by him of the same subject; numerous fine specimens by Guido; Caravaggio's "Woman playing on a Lute," and Giorgione's glowing Lucretia Borgia contemplating a sketch of Lucretia, and inscribed "*Nec villa impudica Lucretiæ exemplo vivet,*" are amongst the works that must be looked at. Titian was the friend and companion of Giorgione, and drew inspiration from him. His life was unhappily shortened. An artist who worked with Giorgione carried off from his house a young girl whom the latter loved greatly. He fell into despondency, and died at thirty-three. The same temperament that made him a charming painter prevented him from living. The great hall of the Prince of Liechtenstein's palace calls for a note. The coved ceiling is decorated with paintings of buildings so drawn that they can be seen in the shape they are intended to present from one spot only,—the centre of the floor. Viewed from any other part of the room they are horrible distortions,—running and tumbling all ways. The right teaching of this clever caprice is,—"what to avoid." In our next we shall rave a little about the Upper and Lower Belvedere.

* A view of the pulpit will be found in the *Builder*, vol. xvi. p. 727.

DINING-ROOM WALLS.

Papering walls is a modern custom. Paint or whitewash formerly made rooms look clean and decent; and even now, in Holland, and some of our own provinces, the more simple wall covering is yet much in use. Whitewash will make the walls of an apartment look clean, though it will probably fail to produce any soft or artistic effect. Paint may give a tint to the sides of the room which will cause the walls to blend into harmony with the furniture and adornments; but by these simple agents no pattern can be produced—no rich breaking up of the surface by graceful lines or flowing curves: these are reserved for some other treatment. Except indeed so far as can be effected by "combing" the surface, by means of which the light is pleasantly reflected and the surface varied.

The decoration of a wall by hand has always been, and will always continue to be, an expensive process. To produce ornament on the wall at more moderate cost, stencilling was introduced; and in years within the recollection of many living, the best rooms in many second-class houses had their walls enriched by this process.

Wall-papers in their turn came to supersede stencilling; and so completely have they gained favour, that they are found in every house, frequently from the kitchens to the attics, while a stencilled room is rarely met with, save in a public and highly decorated building.

While wall-papers, as a means of decoration, have thus superseded the earlier mode of enriching walls, and have even induced its final overthrow as a method of ornamenting the houses of the middle classes, it is curious that up to the present time papers have not been held in much favour for the walls of dining-rooms. Dining-rooms, it is said, should present a dark and rich effect: flock-papers were considered best calculated to give rise to the aspect desired; but to flock-papers the objection has been urged, that their roughness causes them to gather and retain the various odours or effluvia of the edible articles served in the room. If this be the case, their use must be objected to, and flock-papers must be regarded as unsuitable to dining-rooms.

Whether such be the case or not, a feeling that it is possible has in many cases prevented the use of flock-papers in dining-rooms; and as these have long been considered the only papers for such rooms, it has been thought desirable to dispense with their use altogether, and to retain the older treatment by simply giving to the wall an even tint of paint.

Flock-papers as dining-room decorations certainly do not seem appropriate. It is more than probable that a rough surface will retain effluvia which in time, by its augmentation and combination, may induce disease. A smooth surface appears to have a much less power of retaining nuisance of any kind than one which is rough hence it is probable that the practice of white washing the walls of out-houses arose not only from the known decomposing power of lime, but from the ascertained fact, also, that a smooth surface is less likely to harbour that which shall generate disease than a surface that is rougher.

To flock-papers altogether an exception may be taken. They are said to be an attempt at imitating a woollen fabric, or cloth, in paper work; and many attempts have been made at imitating a particular fabric by the use of this ground wool in a particular treatment,—as red, for example.

Shams can scarcely be commended in any form. If we are to regard a flock-paper as an imitation of a woven fabric, then it is open to severe condemnation; for, while a material is capable of yielding beautiful effects which are peculiar to itself, it is very undesirable that it should do badly what another material can achieve much more perfectly. If, however, we are to consider flock-papers as efforts at producing beautiful effects, then they are open to fair consideration.

Flock certainly gives a rich and full effect; but to us the less pretentious aspect of the more simple pigments is the most welcome, and the flat wall-paper is certainly cleaner than the flock. The use of flock-papers is rapidly on the decline, and we are scarcely disposed to grieve that their day is passing, as we deem it an omen of good that the public taste has become so far changed as to enable it to prefer the more simple effect.

Dark papers have long been in use in dining-rooms, and a somewhat sombre appearance is considered desirable in the case of the walls of the dining-room. An Englishman is said to be a man who dines; and certain it is that he esteems the dinner the chief meal of the day. This being the case, an effort has been made to concentrate the whole attractiveness of the dining-room on the table. The walls have been made dark or negative in colour; the furniture unobtrusive; and oil paintings of sombre aspect have been hung upon the walls. All this, together with the white table-cloth, over which the gas is suspended, certainly tends to make the table the one attractive object in the room.

Whether this, when carried to such an extreme, be desirable or not, it is for us now to consider. The dining-table may advantageously look attractive, and in every way calculated to induce an appetite, yet it is somewhat animal to let the whole man be absorbed in that which only administers to the body. If a low key of colouring be

desirable as a contrast to the gay lightness of the drawing-room, some improvement might probably be effected by the table-cloth being toned to a less obtrusive colour than that in which it usually appears. The strong white, while attractive and cheerful, is in harmony neither with the dulness of the room, nor with any colouring possible when only dark tints are used. It cuts up the entire harmony of the room, to use an artistic mode of expression: hence the desirability of a table-cloth of a dark cream hue, such as is now much adopted in window-blinds; or even of one into which negative tints of colour have been introduced.

While the use of a dark paper for the dining-room prevails, it is possible, and even probable, that the use of middle tints (tints half-way between light and dark,—black and white), might be advantageously substituted for the darker hues in some cases. A room naturally dark may be rendered somewhat cheerful without in any way detracting from the adaptability of the room to answer its proposed end; and persons of a melancholy disposition should have everything around them of a cheerful character. Yet we do not think that the dining-room should be as light as the drawing-room. We seek variety; and, as the drawing-room should be light, the dining-room should hence be somewhat dark, if making it so do not bring about any departure from consistency.

What a dining-room paper should be it may be difficult to say. To us it appears that somewhat rich colours may advantageously be employed if they are carefully harmonized. The mere painted wall is not altogether satisfactory, inasmuch as it does not afford us the charms which arise out of the contemplation of colour harmony. Colours *may* have intrinsic beauty, as individual notes in music may be pleasing; but, when harmoniously combined, they give rise to colour harmony as fully as chords of music produce harmonies of sound. We also derive pleasure from the observation of beautiful forms. As, then, colour gives pleasure, and the harmony of colour gives pleasure as well as form, it is certainly desirable that all these means of producing delight in the beholder should be employed for such a purpose.

We have said that rough surfaces harbour effluvia and miasmata: it is hence obvious that smooth walls to the dining-room would be conducive to health. This leads us to propose, as the proper papers for a dining-room, such as have a satin ground. To the satin there is this objection, that in some lights its glabrous character renders the ornament indistinct and its colours altogether invisible. Yet health must precede artistic effect, for no one would be justified in producing an agreeable aspect at the sacrifice of national good. The satin paper, of medium depth of colour, with a richer colour-harmony than has hitherto been employed, may be recommended for the dining-room walls.

OLD LONDON.

Another of those famous old mansions, for which London proper in past days was celebrated, has within the last week or two disappeared, sold for its old materials. It was a house we had set our eyes upon very often, intending to enter and describe what we saw; feeling, as we did, that the interior would repay us for the trouble. Lately, we noticed, with dismay, our old acquaintance plastered over with large posting bills, announcing that the abode was to be sold in lots. Seeing that its days were numbered, we immediately procured a catalogue, and for the first and last time passed the threshold of the mansion. The house was situate about the middle, and on the right hand side, of the Old Jewry: it was well known as the Lord Mayor's Court office, that portion next the street being wholly occupied as such; but the finer part of the house in the courtyard was let out in different offices. From the street front you entered under a gateway to this courtyard. Two boldly carved brackets, in foliage, terminating in a great rose, affected to support the beam, whereas the seeming bracket supports are carved on the beam itself. Immediately before us is the house, which was ascended to by a flight of steps to a door, with jambs and architrave, enriched with foliage, carved in oak. This brings us at once,—at least originally did, for a passage had been taken from it,—into a fine hall, of large dimensions, in which the original panelling, chimney-piece, and we believe the very windows themselves, still exist. It is of lofty and fine proportions. At one end of this apartment was once the staircase, and no doubt a noble one, that which now occupies a portion of its space being a more modern erection. From this hall you entered into three very fine rooms, *en suite*, measuring in length about 70 feet, of a proportionate width, and lofty. In one of these rooms we were captivated by a most charming ceiling: it was slightly domed in the centre, and where a chandelier once hung, for the hook was still there: an eagle, with expanded wings, formed the middle ornament, round which, and filling up the whole of the compartment, were a crowd of Cupids or cherubs. We at first took them for a lot of Ganymedes buffeting the eagle form of Jupiter, but they were innocent cherubs. Each angle of this elegant ceiling was formed of foliage, and the whole was in very high relief. We have seldom seen a piece of work of this sort which took our fancy more than this did; and, hoping against hope, we took a rod which happened to be near us, to try if it might not by some good chance have been carved in wood; but on gently tapping the tip of one of the boys' wings, it fell to the ground, a piece of plaster: if it had been otherwise we had made up our mind to purchase it: as it is, it is doomed to destruction. The end of this room, the boudoir, perhaps, of some rich merchant's wife, was divided off by an open screen of pillars. We have seldom seen rooms of finer proportions than these, the lofty windows, and to all appearance the original ones, reaching almost to the ceiling and to seats a short distance from the ground, and which seats, as was usually the case, lifted up, having useful cupboards within them: the richly-carved wood cornice running round the ceiling. The oak floor, of parquet work, gave to these rooms a grandeur not often met with: they reminded us of Hampton Court and Kensington Palace; making, of course, due allowance for the difference in the requirements of a private person and a sovereign. These rooms looked originally, as we suppose, into a large garden, once belonging to the abode, but now only a long court; buildings of a more recent date, belonging to Grocers' Hall, having been erected on either side. There are many nooks and corners in this house cut up into closets, offices, and various other contrivances, to suit the wants of those who lately occupied them, together with ample bed-room accommodation above. This house we take to have been built in the reign of William and Mary, a period when the city had ceased to be fashionable for the Court and its followers, but continued still to be the abode of many opulent people, especially of the great merchants, who then lived near their places of business. Evelyn says in his "Diary," September 20th, 1672:—

"The palace of Sir Robert Clayton, in Old Jewry, contained a superb banqueting room, wainscoted with cedar, and adorned with battles of gods in fresco."

This state of things no longer exists: the smallest retailer of wares now shuts up his shop and starts off to his suburban villa, the train enabling him to do this. These and similar reflections have induced us to turn our attention to those deserted mansions of old London which still exist, but must, we prophesy, ere long, give way to buildings more useful and better adapted to the wants of the present period. A great and prosperous city like London is ever changing its appearance. Even its western end is liable to this alteration. Of all the splendid palaces that once lined the Strand—for palaces they were—and adorned the north bank of the Thames, not one exists excepting Northumberland House, the most western of all; and that, we imagine, is greatly altered since the time of Elizabeth. In the heart of the City still exists on the banks of the Thames, and tolerably intact, the town-house of the great Earl of Derby, king of Man, now occupied as the Heralds' College.

THE "STRAND HOTEL."

The first stone of the proposed building was laid on the 2nd inst. by the chairman of the company. Lyon's Inn, part of Holywell-street, and part of Wych-street have been cleared away, and give a large site, to which will be added a plot of land running up to the Strand, where, of course, will be the main entrance. There will be about 400 rooms, and in the lower part a large hall, available for public meetings. The division walls for the rooms and open areas above this are carried on iron girders. It is intended to be a middle-class hotel, with moderate charges. Mr. F. J. Fowler is the architect. The contract, 73,000*l.*, for the part to be proceeded with, has been taken by Messrs. P. & A. Thorne, who agree to receive 40,000*l.* of the amount in debentures, the repayment of which is to be spread over several years.

CONTINUED "BLOOD POISONING" AT BETHNAL-GREEN.

The excitement in connexion with blood poisoning,—as it is now popularly called,*—in Bethnal-green, still continues; and new and important cases are being brought before the public notice through the sad medium of the coroner; and, so startling are the circumstances, that the Government and even the parish authorities have been roused to make a show of exertion; and many will feel a hope that now something effectual will be done to put an end to existing disgrace and danger. We trust that these anticipations may prove correct; but many disappointments in this way have rendered us doubtful, and still lead us to fear that when the influential portions of the daily press, thinking sufficient has been done to effect a beneficial change, have relaxed in their vigilance, things will be allowed to relapse into their former state. The parish authorities look carelessly at the sickness and death around them, and sceptically and contemptuously at the actual causes; discouraging the medical officers when they bring too true reports to their notice of the shocking state of suffering which exists. Sanitary inspectors, under such circumstances, will be as lax in their movements as usual, and the relieving officers withhold, to the utmost extent, the relief which is required by the sick and suffering poor. The absolute necessity for important changes in the management of many thousands of the metropolitan dwellings is so evident, that the need of them must eventually be perceived by the Legislature: we will therefore, for our own part, not lessen those exertions which have been made by us during many years for the improvement of the industrious and poorer classes; in the hope that we may the sooner have those changes made which are so necessary in many places besides Bethnal-green. But, to the latter place, the public attention is just now particularly directed. More coroners' inquests have been held, and new instances of neglect and carelessness, and municipal manslaughter, brought to light. Within five weeks, five children of one family had all perished from exactly the same disorder as on the previous inquiry, viz., a "poisoning of the blood," by the impurity of the air, the bad water supply, and other defective sanitary conditions; and the evidence which was given in connexion with the death of one of these children is so remarkable, and shows so clearly the need of that powerful and summary interference which we advocate, that it is necessary to give it particular notice.

Susanna Rogers said, that the deceased, George Rogers, was her grandson, and had lived with his father, a weaver, of No. 19, Thorold-square, Bethnal Green. He went off in a fit the moment the breath went out of his sister's body, on "Friday last" (this was six days before the inquest was held). He was the third child then lying dead and awaiting burial.

* Medical objection has been taken, and perhaps,—strictly and professionally speaking,—rightly enough so, to the use of the compound word "blood-poisoning" in these particular cases; but, besides the fact that several of the medical men examined as witnesses, themselves made use of the same expression under the circumstances, one of them, indeed, suggesting it; a popular and sanitary use has been made of the word which is not now likely to give way to any mere professional restriction of meaning. And after all, we are by no means clear that the public are wrong, even strictly speaking: quite the contrary; for one of the medical men who called the cases blood-poisoning described the blood as of a liquified and tarry description; and if this be not denotive of poisoned blood, we cannot imagine what poisoned blood must mean. Healthy blood, exposed to the action of pure vital air is concretive or clotting in its nature,—not tarry or unduly liquified, or anclotting; so that, even negatively speaking, the vital evil arising from mere want of good pure air here manifests itself; but undoubtedly the active and positive foulness of the air which the children habitually and admittedly breathed contributed to the tarry and unconcretive or unhealthily liquified nature of the blood in question; and so manifested its active and *positive* influence as a blood-poisoner. It will be of no avail for medical men to maintain that the blood in all typhus, typhoid, scarlatina, and other fever cases may as well be called poisoned blood also: let it be so: the expression is sufficiently correct for sanitary and popular use; and we shall continue to use it occasionally in just such cases. The blood is the "life;" and all that deteriorates the blood, or even prevents it from sustaining its life-giving properties, must be poison to it. There are blood-poisons of another kind than that which happened to be operative at Bethnal-green,—blood-poisons which act in an opposite manner; that is by rendering the blood unduly concretive, so that clots of fibrine precipitate as it were prematurely from the mass of fluid blood, and sometimes clog up the vessels, and even the aorta, or the heart, and so kill the patient: such blood occurs in virulent cholera,—it *may* be, either from the cholera.c virus positively and directly decomposing the blood, or from its irritative action on the bowels withdrawing the serum or fluid portion, without directly or actively decomposing the blood itself: but still, this too is just blood-poisoning in a popular sense as well as the other; and the public, and especially all interested in sanitary matters, are indebted to Dr. Moore for the suggestion of so truthful and significant a compound word as *blood-poisoning*.

The mother of the dead children, Mrs. Emily Rogers (with the fear of distress warrants and notices to quit before her eyes), denied that she had ever said that the deceased died through the filthy state of the square, although she had lost five children in five weeks. At a further stage of the inquiry this woman declared that she had never noticed any bad smells,—a statement, the value of which she unwittingly illustrated by the remark, that "*if other people liked to get into a muddle, she did not, and she would keep out of it.*" All her children were attacked in the same way, she believed with scarlet fever.

Here, then, is the lamentable case of a mother actually denying the truth—notwithstanding her heavy loss—for the purpose of screening the landlord of this poisonous property. It afterwards transpired, however, that there were arrears of rent due, and the family was very ill off, while the landlord was distraining and dealing notices to quit right and left amongst those who did dare to speak out.

A second inquest was held on two other of the children, when it was stated that in the twenty-two houses in the square, twenty children had been attacked, and that twelve of these had died. The Roger family occupied one room, and were ten in number,—eight children and the father and mother. Here, even without any other cause, the overcrowding was sufficient to produce pestilence: but George Stratford, a weaver, a sensible fellow, who lives at No. 4, tells us that there had been no water supplied to any of the houses but three, for eighteen months, except through a broken and unuseable pump. In the heat of the summer they never had a pail of water for three weeks, except what they begged from others as best they could. (Another witness said she had to wash herself with the same water three times running, which reminds one of a short supply on shipboard and at sea.) The closets were bad at witness's house and in the adjoining premises. The closets had no pans, and were not trapped: in fact, they might be called cesspools: sometimes they were empty, but he had seen them running over with soil. He had written to Sir George Grey on the subject, but was referred by him to the Townhall authorities, namely, the district board. There were sixty families in the square, and about 350 children among them.

Surely such a place as this should have had the careful attention of the parish sanitary inspectors; but Mary Ann Clayborn, who had lived at No. 1 in this square, and whose husband was a shoemaker, had made a complaint at the Townhall, to a "dark gentleman" whom she saw there, that the water-supply was very defective, and that the stench from the place was so bad that she was unable to remain in the house; and in reply this official only jeeringly asked her why she did not take one of the big houses on the other side of the park. This was only adding insult to injury; but probably the intelligent gentleman believed that a mere clay-born woman and her children could suffer no injury from stenches or want of water. He put Mrs. Clayborn's name, however, in a book; but, at the end of a week, no one having called, the witness went again to the Townhall, and asked the clerk if they were to be allowed to perish for want of water. He replied:—"Bethnal-green is a large parish; but the complaint is down in the inspector's lists: he will see to it to-day." Witness threatened that if the matter was not immediately attended to she would complain to a higher authority. He then stupidly said:—"Every one seems to come here to complain of every trifle: this is not a divorce court;" and added, "Don't you come to the Townhall to complain, else you will have to leave your house." And shortly after the woman did receive notice to quit her apartments, and was compelled to quit,—not of course at the clerk's instance, but at her landlord's; the clerk's hint, however, being but too significant of many a like result. Such conduct on the part of landlords is very disgraceful.

Mr. John Gay, the superior medical officer of the Great Northern Hospital, said that he had made a *post mortem* examination of one of the children. He found the lungs healthy, but almost bloodless: he believed that deceased died from blood disease from the want of sanitary measures. The houses were unwholesome: several of the water-closets were choked up, and the families looked unhealthy, pale, and wan, clearly from the inhalation of impure atmosphere: the houses are not fit for habitation. Mr. Massingham, the district surgeon, expressed the same opinions as Mr. Gay.

The jury agreed that the deceased, being children of tender age, had died from the mortal effects of blood disease, accelerated by want of water and of sanitary measures.

The medical authorities agree that the deaths which have occurred in this square are not the result of any infectious complaint; although one gentleman, Dr. Powell, in the first case, gave it as his opinion that the child had died of blood poisoning *from diseased kidneys*; but on being reminded that in five weeks five children in one family had died precisely in the same way, besides seven others on the same spot, he admitted that fœtid air and bad water-supply would cause poisoning of the blood. All we need say as to this evidence is, that if, strangely, all the twelve children had died of poisoned blood caused by diseased kidneys, then the production of disease of the kidneys must be the way in which fœtid air and bad water-supply poison the blood; but there is no reason to believe that any of the other children had disease of the kidneys at all; and although, in the case in question, such a disease would accelerate the death, undoubtedly the child died from one and the same cause which killed all the other eleven under similar circumstances. The jury, however, on Dr. Powell's evidence, gave a verdict of died from blood-poisoning by diseased kidneys.

Even this wholesale slaughter is not to be wondered at when we find people surrounded by every sanitary neglect; living in rooms dirty and without ventilation, to the number of nine and ten in each—and more, frequently, at night.

The insanitary state of neighbourhoods which, month after month, and year after year, remain unmitigated in their filth, unless some fever or other pestilence break out, might, even in the present state of the law, be greatly improved; and such a state of things only too evidently shows that, in east London, the parish inspectors, as they at present exercise their functions, are next to useless. No more striking instance of the need of change could be given than Thorold-square, where twenty cases of a dangerous disease, which had, at the time of the inquest, been fatal in twelve instances, were known to have occurred, in consequence of the foulness of the place. The parish medical attendant must have been quite aware of this; and ought, we think, to have reported on this mortality to the Board. As for the landlord or his rent collector, when the poor people, in consequence of the handle of the pump having been broken, or from other causes, had been without water for weeks together, and were suffocated with bad smells, he only laughed at them, or abused and threatened them if they dared to complain. And with reference to the district authorities, the woman, who with a little more energy and independence of feeling than her neighbours displayed, went to the Townhall, was treated, as we have seen, with contempt by the clerk there, and was afterwards turned out of her place by her landlord, as the clerk knew well she would be. For weeks after the complaint had been made, and entered in the book, no inspector appeared; and it is impossible to say how long it might have been before that official would have taken the trouble to call had not the woman been driven, by sickness and headache, to threaten an appeal to higher powers.

Even the medical gentleman (Dr. Moore), to whom the public are indebted for refusing a certificate of the cause of death in the first of these Bethnal-green blood-poisoning cases, and thus forcing them on the notice of the coroner and his jury, has since been badgered and worried by some of his own constituents, the local board of guardians, as if he were some unworthy servant who had in this failed to do his duty, and had made misstatements in order to screen himself from their just indignation: such is actually the shameless face which these unworthy members of the Bethnal-green board of guardians have put upon the whole case. Even the reporters for the daily press have come in for a share of the obloquy, for having but too faithfully reported to the public all the abominations which such worthies would have concealed. A vestryman, who we regret to say is a builder, managed, covertly, to threaten the reporters by requesting the coroner to "require that the reporters present should give their names and their addresses, and should also state the names of the newspapers which they respectively represented." This extraordinary demand, and its manifest object, says the *Star*, created a marked sensation in the court. The coroner, of course, treated it with the contempt which it well merited. Two vestrymen and the vice-chairman of the board of guardians were about to allow themselves to be sworn in as jurymen, when they were discovered, and expunged from the list. What a multiplicity of crooked and obstructive interests, all working towards the wholesale manslaughter of the helpless people and their poor little children, this most instructive investigation has disclosed!

At an even later period of the inquiry, we find the inspector of nuisances, Mr. Morris, not only naïvely acknowledging that he allowed himself to be bribed by the owners of slaughter-houses to be licensed, but positively making a charge, before the whole vestry, against the beadle, for appropriating some of these "fees" or "privileges," which he said he "would be plain" enough to confess that he expected and received, but that in certain cases "the beadle had usurped his privileges by going round promising *his* assistance in *obtaining* the license, and had pocketed the money; and he need not remind them of the old adage, that it was 'difficult to take butter out of the mouth of a dog.'" A couple of nice dogs truly, whose "scent" after "filthy lucre" must be much more vivid than their faculty for ferreting out "nuisances!" Proper men should be appointed in their places immediately.

We are glad to learn that the attention of the Home Office has once more, and now effectually, been drawn to the deplorable condition of the dwellings of these poor inhabitants of Bethnal-green. On Wednesday and Thursday in last week, a Government inspector made an official survey of the premises in Hollybush-place or lane, the seat of the late mortality. The inspector, accompanied by Mr. Massingham, Mr. Defries, and Dr. Meldola, three of the medical officers of the district, went over the house in question, which was found to be in a wretched condition. An order was given for the several rooms to be limewashed, and the back premises to be repaired and better drained. Several dwellings adjoining were also visited; and instructions issued by the inspector for cleansing and draining, with the view of arresting the progress of the disease. The parochial officials have also now "*warmly* taken up the matter," and the sanitary inspector has even received orders from the board of guardians to carry out various improvements. A special meeting of the members of the vestry was held on Thursday afternoon, in the Town Hall, Bethnal-green-road, for the purpose of investigating the facts "connected with the late allegations as set forth by Dr. Moore," the parochial medical officer of the district, and several persons were summoned to give evidence, but the subject, after some discussion, was adjourned.

It is imperative that houses let to various lodgers should be systematically and most carefully inspected, and made sanitarily habitable. There should be no possibility of twenty-two houses swarming with people being left for weeks without water; with choked closets, imperfect drains, and interiors on which the landlord had not paid 1s. for repairs or cleaning for a long period. To effect what is needed, as we have often said before, must not be left to parish authorities, but be placed in the hands of a power quite independent, and not likely to be biassed by either local or personal considerations. Long ago, and especially last year, this important matter was discussed in these pages; and again we urge the necessity, and repeat the groundwork of a plan which, if carried out, would make a surprising change in the state of these squares, courts, and alleys, which are at the present time so unwholesome and dangerous,—a plan which would be the means of saving many lives, and in the end would be satisfactory both to landlords and to tenants. Throughout the metropolitan district all the dwelling-houses which are sub-let into more than a certain number of tenements should be placed, with certain restrictions, under the inspection of properly qualified persons, who should be empowered to grant *licences for the letting* of these places, provided that their condition was satisfactory,—viz., the premises in good repair, and clean; the rooms, staircases, &c., sufficiently ventilated; the drainage good; a proper quantity of water supplied; and dust-bins and closets rightly ordered. This would occasion some expense; but the amount, levied with the police-rate of the metropolis, would be comparatively small; some parishes would actually gain; and the saving of life and of the cost of pauperism, caused by the sickness and death of parents, would be immense. We believe that a measure of this kind, well managed, would, to a considerable extent, remove one of the foulest blots of the metropolis. There are many houses which, with proper sanitary care, might be made tolerable and fit for human habitation; and along with this improvement there would come a beneficial alteration in the manners of the people.

THE RURAL HOMES OF AGRICULTURAL LABOURERS AND THE PITMEN OF THE NORTH.

In a letter recently addressed to the *Times*, Mr. Clarke, sanitary inspector, of Castle Meadow, Norwich, gave an account of upwards of fifty cottage-dwellings which may be taken as a fair example of the houses of a large part of the industrious classes in that district, where we find instances of the most gross sanitary neglect, and arrangements, by existing circumstances forced upon the people, which set all the rules of decency at defiance. Sadly do these notes prove the condition existing at the present day, to which we have year after year directed attention; and it must not be forgotten that Mr. Clarke's account, which concerns one county only, might be also applied to the chief of the agricultural districts.

From Norwich we have accounts of places in which ventilation seems to have been altogether neglected: in others it is quite insufficient. In one small cottage of two rooms, occupied by a couple of families consisting of nine persons, the only means of ventilation is a casement 1 foot wide and 2 feet deep. In other instances, walls needed propping up: in some are rents and cracks: filthy dykes, full of stagnant drainage-matter; and most of the other evils which neglect, ill-construction, &c., produce, attend the dwellings provided for an industrious population. It is impossible, during either the night or day, to prevent the admixture of young people of both sexes. Windows are stuffed with rags, floors are full of holes, roofs are leaking, and plaster and walls are in a shattered condition. But this state of things is now so generally understood, that it would seem scarcely necessary to enter into details. There are, however, one or two of Mr. Clarke's descriptions which we cannot forbear repeating.

"A cottage with two small sleeping-rooms, occupied by a man and his wife and ten children:—Son, 23; daughter, 21; son, 19; son, 17; son, 15; daughter, 14; son, 11; daughter, 8; son, 6; son, 4 years of age."

"Seven children sleep in one room, with low ceiling. Complained of being very hot in summer. The size of the window, 2 feet 11 inches: ages of children—son, 17; daughter, 15; boy, 11; girl, 8; boy, 6; girl, 4; boy, 2."

"One bed-room, occupied by a man, his wife, and four children, as follows:—Girl, 18; boy, 14; girl, 5; girl, 3."

In one cottage, occupied by a man and his wife and eight children, there was only one bed-room; but, for the purpose of observing a little decency, the occupier had built a partition across the room; but as there was only one casement, one of the places parted off has no ventilation, and this dark space, 6 feet wide and 14 feet 6 inches long, was occupied as follows:—Daughter, 24; son, 21; son, 17; daughter, 15; girl, 11; girl, 7; boy, 5: the other was an infant, and slept with its parents. There were only two stump-bedsteads in the house.

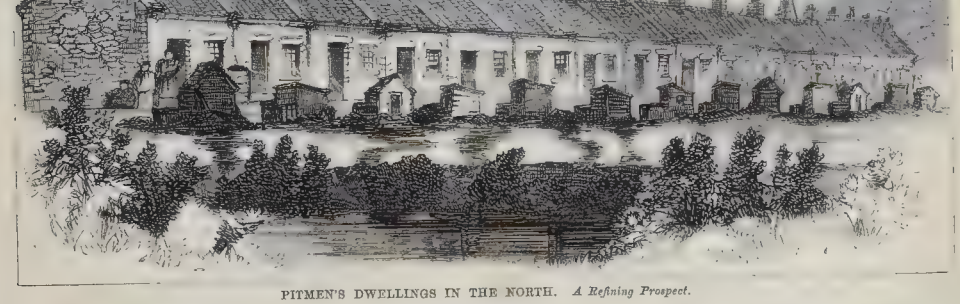
How can we expect, under such unfortunate circumstances, that our peasantry will be "*their country's pride?*"

Mr. Clarke does not refer to the water supply, but mentions instances of the total neglect of closet accommodation, and of some most abominably situate.

As we have already mentioned, it is not in the district of Norwich alone that this terrible state of things is allowed. In Bedfordshire, Hertfordshire, Buckinghamshire, and other counties, in which a large part of the population is engaged in agricultural pursuits, matters will be found as bad, if not even worse; and it is to be observed, that these are the dwellings chiefly occupied by married workers and their children; and there are many unmarried men and women, who are accommodated with sleeping space in the premises of the farmers, who are not better accommodated than those above referred to. This is a matter which has not been much noticed; but it is well worthy of consideration, for it is a serious source of mischief.

THE STEPHENSON HOVEL; DEWLEY BURN, NORTHUMBERLAND.

In parts of Yorkshire, portions of Durham and in Northumberland, the cottage dwellings are of large size and better built than those in the southern counties; but, notwithstanding, there is a sad want of proper plans adapted to the use of an increasing family: here are to be found, in various directions, the most wretched hovels.



On the estates of the Duke of Northumberland and elsewhere, during recent years, a marked improvement has been made; but farther northward there are villages to be met with which are probably not better circumstanced than those which were to be found in this country in the Middle Ages.

It is not, however, in connexion with the houses of the agricultural classes alone, that there is reason for complaint; but throughout the mining districts of Northumberland and Durham there is also great need for improvement. "*The Pit Rows*" (rows) are mostly long ranges of dwellings, of only a single story in height. In front of each house there is generally a door and a single window. The front room is for the most part of fair dimensions, in which the family live, and where part of them sleep. The inner room is of smaller size, and is neatly and well furnished. This is used for sleeping; and on Sundays, or important occasions, for the reception of visitors. For the most part, there are in these houses no sculleries or accommodation for washing clothes, and this must therefore be done in the principal room—or, when the weather is fine, in front of the house. Behind each of these buildings, there is usually a garden. In some there are privies, with cesspools, which are often rudely constructed by the pitmen themselves; but, in a multitude of instances, *there is no provision of this kind at all.*

To a considerable extent, paving and draining are neglected.* In front of the houses are dust-heaps, mostly altogether uninclosed, on which all household refuse is thrown. Near this there is generally a pig-sty; and it seems to be a remarkable circumstance, that while the gardens are well kept, and the interiors of the houses beautifully clean, the furniture brightly polished, the bedding well attended to,—while the men and boys after their work take care to wash themselves clean, and the women are particular as regards neat and tidy dress; they should, notwithstanding, cause such unsightly accumulations before their own doors, which are as indecent as they are unpleasant and dangerous. But the people themselves are not altogether to blame for this, for we do not see how, with the present arrangement of a majority of the dwellings of this kind, it is altogether to be avoided.

These pit rows are nearly, if not entirely, the property of the owners of particular collieries, to whom it is customary for the men and boys to bind themselves for a stated period, and for certain money and other considerations: part of the latter is the possession of a house, rent free, with coals, and sometimes candles; and in this way the workpeople are entirely dependent on their employers for the construction of their homes.

This very important matter, which affects a vast and industrious multitude, was brought under the notice of the British Association, at Newcastle; and it is hoped that the need of change which was then shown will lead to beneficial results, and that at an early day the Marchioness of Londonderry, the Earl of Durham, Lord Ravensworth, Mr. Matthew Bell, and other large colliery proprietors, who derive enormous revenues from this trade, will strive in a worthy spirit of rivalry for the removal of an evil which is disgraceful to themselves, and stops the right progress of the persons whom they employ.

PITMEN'S DWELLINGS IN THE NORTH. *A Refining Prospect.*

* At Killingworth Colliery Village, a black open ditch passes at no great distance from the front of the houses. This carries off part of the surface water, but is in itself a source of poison.

The dwellings of this class are provided for the most part by the masters: the men have no choice in the matter: it is therefore clear that the employers are responsible for the fashion and condition of these places; and they might, if proper facilities were furnished, easily put a stop to middens and other abominations in front of the dwellings. Having said so much, we will offer a few words of practical advice respecting the pit rows which are at present in existence, and those which will be required, in consequence of the extension of the coal trade, and through the decay of houses which are now in use.

It is unfortunately the case that many of the rows are built on sites which are quite unsuitable, where it is next to an impossibility to provide, if even the disposition were shown, even surface drainage. This, it is said, is caused by the necessity which exists for having the homes of the men near their work, and so preventing them from being under the necessity of walking long distances, often in the night time, to and from the pit. It is also stated that a limited space of land only, round the pit's mouth, being the property of the coal owner, has been made use of, when a better site, at no great distance off, might have been obtained at a little extra cost. Generally, in the neighbourhood of the coal-pits, the land is barren, and of small worth for agricultural purposes, the richness of the bowels of the earth atoning for the nakedness of the surface. The quantity of ground needed for houses and their appurtenances is of comparatively small consideration; therefore, plenty of space should be allowed. In situations where drainage cannot be effected (we allude to buildings now erected), the gardens at the back of each house should be extended, and privies, connected with a properly covered dust-bin, provided. The contents might be usefully distributed in the garden, or they would be readily taken away for use elsewhere. The pitman could not be easily persuaded to do without pigs; in fact, they supply many with a considerable quantity of food, and can be fed at a small cost with the refuse of the garden and waste matters from the family use. They might, however, be more fitly accommodated in connexion with the dust-place, at the back of the gardens, which very often abut upon inclosed fields. Supposing that the styes and middens were removed from the front to the rear, part of the space in the front might, if it were of any use, be railed off; and, as an equivalent, a roadway made along the gardens at the back of the row, which would allow the passage of carts for the removal of any refuse when necessary. This done, the casting of filth, in front of the rows should be strictly forbidden. Then, for some extent in the front of the cottages, the space should be paved. Means should be used for providing spouts for carrying the rainwater into covered casks, where it would be useful for washing and other purposes.

Where it can be done, the front part of houses which are occupied by pitmen who have more than two children should be raised another story, so as to afford more sleeping accommodation.

At present, in many of the pit villages, there are brick ovens erected in the front of the rows, in a line with the piggeries and "closets." It is the custom to bake bread in large loaves, and in sufficient quantity to last the family for a week. On the "baking day," the persons who are to use the oven attend to the heating of it. There is no scant of fuel. The cracks of the bad brickwork are filled with clay. In the end the bread is generally well baked; but improvement is needed in this direction.

As regards new pit-rows (the pit-rows of Queen Victoria's reign), they should be established in some situation where proper drainage is possible; for, often the population of those places amounts to 1,000 men, women, and children, and upwards. Drainage is indispensable. We do not see that it is necessary that these houses should be built in one line, unless suitable space for this purpose can be found. The houses should not be planted on the surface of the ground. There should be houses adapted to the use of the people, according to the extent of their family. There are other matters to which we may presently refer; but just now we will content ourselves with adding that scavengers are necessary in even the best-constructed of the pit-rows. It must not be forgotten that within a short distance of the Earl of Durham's residence, in Lambton Park, cholera carried off hundreds of people.

We have made a drawing of one of the Pit Rows to show their evils, exaggerating nothing. We also append a view of a cottage near Dewley Burn, Northumberland, which has an added interest from association. It seems that the engineers and stokers connected with the machinery used in the collieries are not provided with free lodgings, like the pitmen, so are obliged to take up with such accommodation as they can obtain in the neighbourhood of the works. In the small, unwholesome hovel here shown, "old Bob" the stoker, the father of George Stephenson, found a shelter for himself, his wife, and several young children, when he left Wylam Colliery. George found employment with Widow Ainslie, who lived not far off, at 2d. a day, and the sum was afterwards raised to 4d., when he was big enough to prevent the cows from straying away.

ISLINGTON GREEN.

Men are at work converting Islington Green into a garden. Each side of the area will be enclosed and planted, and the public will be admitted to a broad central walk, with seats, shaded by an avenue of trees. The alteration will doubtless be a great improvement to the neighbourhood; but there are usually two sides to an act, and so it is in this case. The green has heretofore been the resort of hundreds of children daily, and a great boon to the poor dirty things,—dwelling in the close alleys and other places thereabout. Will these still be admitted? And if not, where can they get a little fresh air and muscle-developing recreation?

The main road from the Angel northward is being greatly improved. A wide piece of waste land, lying between the pathway and the road, and heretofore occupied by wooden sheds, old furniture, and tumble-down signboards, is being levelled, and added partly to the road and partly to the footway, with great advantage.

ST. PAUL'S AND WESTMINSTER ABBEY.

A correspondent, who signs "Ecclesiasticus," writes as follows:—"If any evidence were required to demonstrate the improved religious feeling, which happily characterises the present century from the eighteenth, a stronger proof could not be adduced than the desire evinced in almost every diocese to repair, restore, and beautify the cathedral or mother church. It is most gratifying to witness the liberality displayed by all classes, rich and poor, clerical and lay, where their contributions are solicited for so noble an object; and not less pleasing is it to be able to admit that the funds raised have been for the most part judiciously and profitably expended. The artistic skill, constructive knowledge, and æsthetic taste manifested in the restoration of these glorious piles, have extracted from all foreigners the strongest expressions of surprise and admiration. York Minster and Durham, Ripon and Ely, Wells and Gloucester, Canterbury and Chichester, St. Mary's Redcliffe, and Sherborne, Romsey, and Shrewsbury, and the round churches at Cambridge and Northampton, may be mentioned as among the choicest examples of successful restoration. If so much has been accomplished, and that with such marked success in the provinces, surely it behoves the inhabitants of the most populous, wealthiest, and, take it altogether, the grandest of capitals, to show a like interest in the beautifying and adornment of two such splendid edifices as St. Paul's and Westminster Abbey. Too much praise cannot be given to the Dean and Chapter of St. Paul's for the exertions which they have made, and are so unremittingly making, to augment the funds at their disposal, that they may proceed at once to carry out those improvements which will add so much to the effect of this truly magnificent cathedral. Not less praise is due to the Dean and Chapter of Westminster, who not only contemplate the restoration of the chapter-house, but have given orders to Mr. Scott to prepare a new screen, of rich and elaborate design, the works upon which have been already commenced. The Dean and Chapter of St. Paul's, and also of Westminster, having done so much, it is now incumbent upon the laity to assist them liberally in their earnest endeavours, and to provide funds for the carrying out of the grand achievements they contemplate."

We endorse this exhortation to the fullest extent; and trust it may be responded to. We are forced, however, with respect to St. Paul's, to express a grave doubt, whether the character of the ornamentation there determined on, as already set forth in portions of the building, will prove satisfactory. We state this with great reluctance, and shall say hereafter whatever we may find it necessary to advance on the subject with an earnest desire to give no pain, and to throw no obstacle in the way of a work so desirable. It is so serious a matter, however, that plain speaking in opposition to any personal feeling is imperatively called for, and we are forced to assert that what has been done is timidly poor, and sadly ineffective; and, we fear, that what is intended, so far as we can learn, will be equally so. St. Paul's needs colour and fine art.

ART WORKMANSHIP PRIZES.

The Council of the Society of Arts have announced that they have found it necessary to defer, for the present, holding an exhibition of the works sent in to compete for the Art-Workmanship Prizes offered by the Society, as the repairs now going on in the Society's house render it impossible that the articles could be displayed in a suitable manner, and also because a large number of those who would be specially interested in seeing such works are absent from London at this season.

This step will not be considered satisfactory, or gain for the Council any great credit; they should have fixed the date later in the first instance.

THE NEW NATIONAL ART TRAINING SCHOOLS AT SOUTH KENSINGTON.

The new schools which have come into use are the first *permanent* buildings which have been provided for the National Art Training Schools. The buildings heretofore occupied by the art classes have all been of a temporary kind. In the first instance, in 1837, when the School of Design was instituted, the classes were held in rooms on a second floor in Somerset House. Next the classes met in 1852 in Marlborough House; then in wooden buildings at South Kensington, to which place the training schools were removed in 1856. The present buildings are of brick, plain, but apparently substantial, and provide for all the special requirements of an Art School. A distinct series of rooms has been provided for male and female classes; those for males being on the second, and those for females on the first, story. In each series, separate rooms are assigned for drawing, painting, and modelling; and there is a lecture-room in common for the male and female classes. The entrances to the respective classes are in Exhibition-road. Models of the best description, objects of art to form subjects, pictures, prints, in fact everything that students can need or wish for in this respect are provided. There is plenty of space too, and we shall hope to find the number of pupils greatly increased. The colour adopted for the walls of the various apartments seemed to us gloomy.

It may be useful to say that the courses of instruction pursued in the school have for their object "the systematic training of teachers, male and female, in the practice of art and in the knowledge of its scientific principles, with the view of qualifying them to impart to others a careful art-education, and to develope its application to the common uses of life, and its relation to the requirements of trade and manufactures." Special courses are arranged in order to qualify schoolmasters of parochial and other schools to teach elementary drawing as a part of general education concurrently with writing.

The instruction comprehends the following subjects:—Freehand, Architectural, and Mechanical Drawing; Practical Geometry and Perspective; Painting in Oil, Tempera, and Water Colours; Modelling, Moulding, and Casting. The classes for Drawing, Painting, and Modelling include Architectural and other Ornament, Flowers, Objects of Still-life, &c., the Figure from the Antique and the Life, and the study of Anatomy as applicable to Art.

The annual sessions, each lasting five months, commence on the 1st March and the 1st October, and end on the last day of February and the last day of July, respectively.

In connexion with the training school, and open to the public, separate classes are established for male and female students, the studies comprising drawing, painting, and modelling, as applied to ornament, the figure, landscape, and still life. The fees for classes studying the whole day, are 4*l.* per session; for classes studying only in the morning, from ten till half-past twelve, 3*l.* per session; for the afternoon class, from one till three, 2*l.* per session; with an entrance-fee of 10*s.* to each of these classes. Evening class, 2*l.* per session, with no entrance fee. An evening class for females meets on Mondays, Wednesdays, and Fridays, from seven to nine o'clock—fee, 10*s.* per session.

There is a special class for artisans for instruction in elementary drawing, geometry, perspective, mechanical and architectural drawing. Fee, three evenings a week, 10s. per session; five evenings a week, 15s. per session.

The head-master is Mr. Richard Burchett; the deputy head-master, Mr. R. W. Herman.

PROVINCIAL SCHOOLS OF ART.

The Stoke School.—The annual report of the committee states that for the first time since the establishment of this school the receipts for the year have been sufficient to meet the expenditure. This result is due partly to a reduction of the rent of the Memorial Building, partly to an increase of subscribers, and partly to the necessity having arisen for dispensing with the services of M. Protat and Mr. Bacon. The committee hopefully look forward to the time when they shall be able to reinstate the full staff of masters. Their report, as well as that of the master (Mr. S. Rice), speaks favourably of the operations of the school during the past year. A public meeting for the distribution of the prizes gained at the national competition and local examinations of 1862 and 1863 has been held in the Town-hall, under the presidency of the Rev. L. T. Stamer, Bart. There was an exceedingly numerous and influential attendance. The rev. chairman opened the meeting, after which it was addressed by Mr. A. J. B. Beresford Hope, who, in course of his remarks, before distributing the prizes, said he felt that the nation was going through a great transitionary state. Material science was advancing with giant strides. They saw the effect of railways; of mills with their engines of stupendous power, employing thousands of hands; and of the immense ironworks carried on in the Moorlands and other parts of England; and they asked themselves what was to counteract that materialistic tendency in the minds of the people of England? He had seen two things grow up side by side in the last few years; and though they might be surprised at his classing the two together, he would say—God grant that they might prosper! One was the movement in which they were engaged that evening, and the other was the rifle movement. One might be termed the gentle and refined feminine improvement, and the other the stalwart masculine development. These two tendencies would counteract the materialistic tendency, and convert it into a blessing. They would keep up the active, manly, joyous characteristics of Englishmen: and he said, "God speed them both." The art element would purify the highest as well as the lowest grade of society. He believed, as Lord Stanley said at Preston, the other day, that the people of England were as artistic as the people of any other nation in the world; and of late years much taste and refinement had been spread through the country. The Hon. C. B. Adderley, M.P.; Alderman Copeland, M.P.; and Viscount Ingestre, M.P., also addressed the meeting; and Mr. Henry Cole said that, as to the new minutes of the Council, there was no intention to damage schools of art. It was not considered desirable to give aid towards the cost of the instruction of the middle classes, but that the Government grant should be applied for the benefit of the artisans, of whom, he observed, the pupils of the Stoke schools were almost entirely composed; whereas schools like that at Exeter would be the losers, the pupils in the school in that city and some other places belonging almost exclusively to the middle classes. He thought the schools of art ought not to depend upon subscriptions, but that they should be put into the hands of the people of the respective localities in which they were situate. Thus, if the people of any town would consent to a small rate of 1d. in the pound upon their rental, they would establish the school in a flourishing condition for ever.

The Taunton School.—The annual meeting for distribution of prizes has been held at the local school. Mr. W. A. Sanford presided. The attendance was not very numerous. The Rev. W. A. Jones read the report, which referred to the large number of prizes and medals awarded by her Majesty's Inspector, and to be distributed, as a sufficient evidence of the value and success of the system of art-teaching adopted in the school. In addition to twenty-four local medals awarded for drawings and paintings in various stages, executed by the pupils in the school during the past year, there were seventy-six prizes given by the Department of Science and Art to the School for drawings, &c., executed in the presence of the Inspector. Mr. Jones remarked that his chief interest in the school was in connexion with the provision which it afforded to the artisans of Taunton to obtain art instruction of the highest character for a very low sum; and he still hoped with Mr. Elliot to interest them in the school, and to convince them that it was to their advantage to attend. They hoped likewise to induce the employers of skilled labour to urge upon their apprentices and workmen the advantage of attending that school.

ARCHITECTURAL SCULPTURE.

A Working Sculptor writes as follows:—

The following paragraph appeared in the leading article of a recent number of your journal:—

"Have we even yet the men in any number (willing so to work) capable of executing, efficiently, sculpture for architectural purposes?"

Now, sir, I know that we have sculptors who can execute first-rate figures, but who will not do them at a price likely to render good sculpture available for architectural purposes. But this reluctance to work cheaply arises from the fact that they have confined their attention chiefly to portrait-sculpture in marble; and when they condescend to execute a figure in stone for a building, they think it must be highly wrought as to surface and detail: they cannot, in fact, *dash off work in a bold manner*, not having been accustomed to it. But I think there are men to be found who can do this, and who would do it for building purposes effectively and cheaply, if confidence could be exercised towards them. I know others, but I speak now for myself. I have been twenty-one years in London, carving marble busts and figures, and I have not been above stone whenever I had it to do. I can model a bust or figure well, and have gone through every process, I have attempted to become independent of journey work, but my means would never allow me to stand long enough on my own ground; and I have seen that little men have no chance. I have work to be seen at my own shop, open to the street, which will prove my ability; yet no architect has ever asked me to do a figure for him. I will find others who would do such work gladly. Whose fault is it, then? Let architects seek, and they will find.

COMPETITIONS.

West London Union Workhouse.—The guardians of the West London Union have made their selection from the thirty-three designs sent in for the proposed workhouse, and have awarded the first prize to the design having the motto "Homo," in blue (there being two with the same motto), and this, with some modifications, will be adopted in the erection of the workhouse. The estimated cost of the building, according to this plan, is 18,000*l.* or 20,000*l.*; but with architect's commission, fittings, and other extras, the total cost will reach 25,000*l.* The successful competitors are Messrs. Searle, Son, & Yelf, of Bloomsbury-place. The second prize has been awarded to the design with the motto, "Honesty the Best Policy," the author being Mr. H. Jarvis, of Trinity-square, Borough; and the third prize to the design with the motto, "Experience," the author of which is Mr. H. S. Isaacs, of Gray's-inn.

Cheltenham Parish Church.—The committee have awarded the premium of 105*l.* to Mr. C. H. Cooke, and that of 52*l.* 10*s.* to Mr. W. Norton, both of London.

THE NOBILITY OF LABOUR.

Our lords are every now and then giving their practical testimony to the nobility of manual employment. One day we find a lord hard at work, expending his noble surplus energies in the usual labour of extinguishing conflagrations. At another time we find one working busily in a ship-yard, like Peter the Great, and highly ambitious to become the head of an eminent ship-building firm. Again, we see a truly manly lord inventing and constructing a "fire-horse" for common roads, and traversing the country with it, as the engine-driver, with his wife beside him. This same nobleman, the Earl of Caithness, whose practical knowledge of the steam-engine is well known, was the other day going by train from Edinburgh to London, to accompany her Majesty to Scotland, when an accident happened by which his lordship's acquaintance with steam was turned to good account. Shortly after leaving Newcastle-upon-Tyne, the train came to a dead stand; and on the earl inquiring the cause, he was informed that an essential part of the engine had given way, and that no mechanical engineer could be got to repair it. His lordship immediately jumped out of his carriage, and, in less than a minute, was hammering away at the disabled engine as if he were the working engineer of the line himself. Sooty fingers, greased clothes, and awkward positions in reaching the injured member, formed no obstacle to Lord Caithness; who, in less than an hour, had everything put to rights, and returned to his carriage to prosecute the journey, not quite so lordly-looking in face and fingers as when he started. Only one little feature in the pleasing picture was awanting to render it complete; and that would have been the presence of her Majesty, and of his lordship in her presence, with the "sooty fingers" and the "greased clothes,"—a sight, we feel assured, that would have better pleased that gracious and sensible lady than his lordship in his robes and coronet. Clearly "Lord Dundreary" is not the only "noble" lord whom we can call "a Briton."

DISCOVERIES OF ROMAN AND MEDIÆVAL REMAINS.

Archæologists are reaping a rich harvest of their own especial crops at present,—Roman, Anglo-Saxon, Celtic, and other remains cropping out in various directions, throughout England and Scotland, as well as on the Continent.

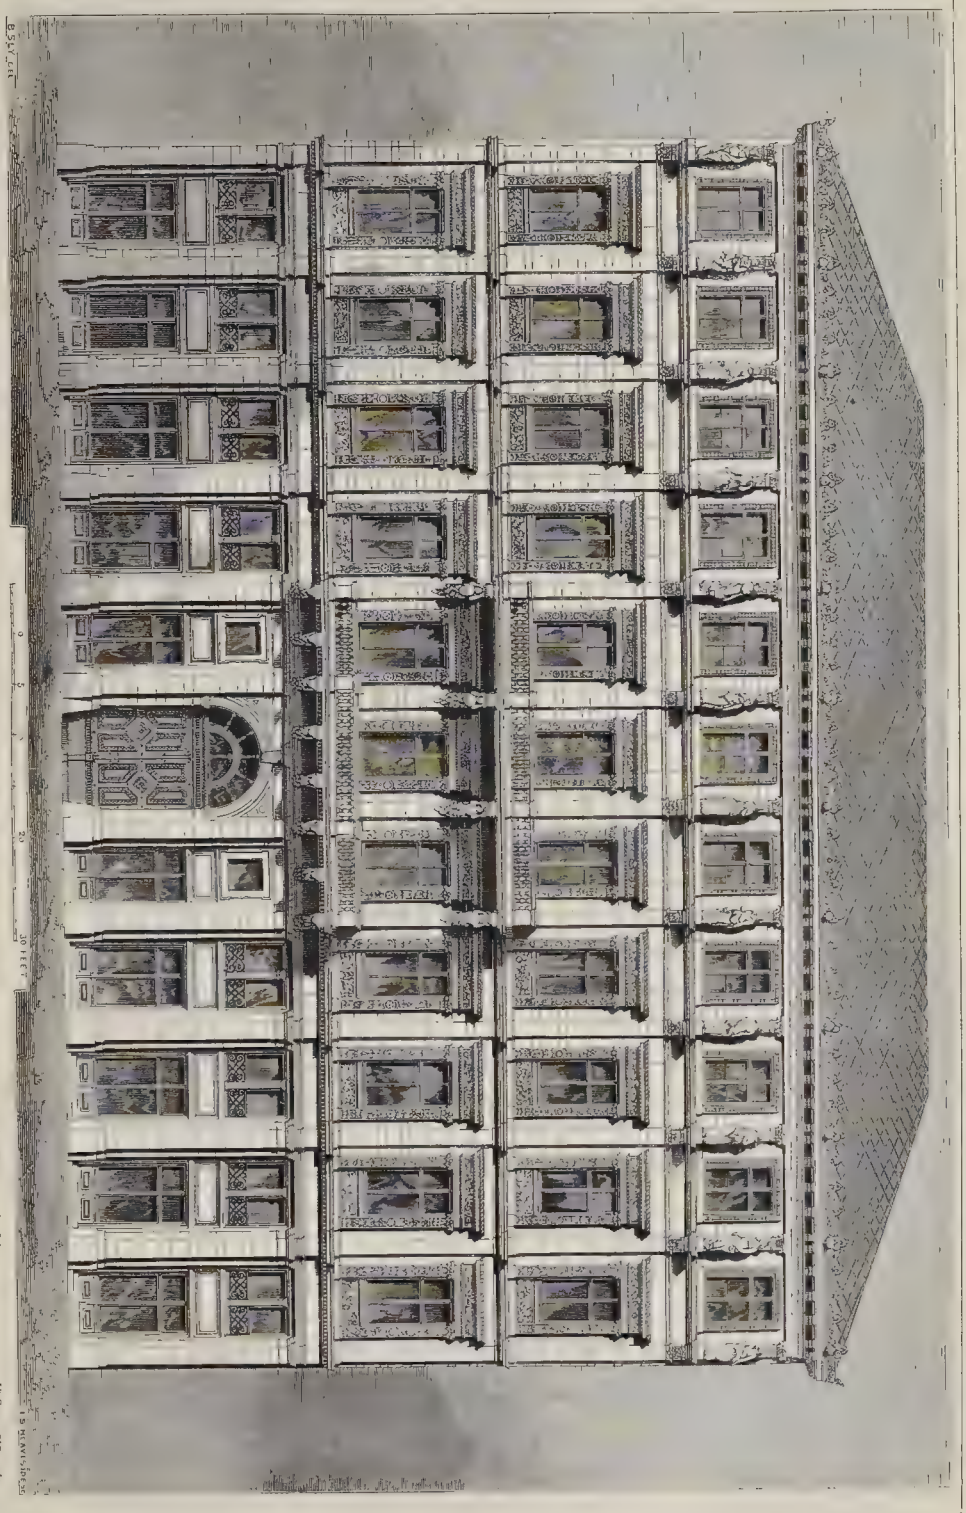
Excavations are in progress on lands at Wycomb, Andoversford, near Cheltenham, where extensive foundations of Roman buildings have been found. The traditions of the neighbourhood have always stated that a Roman town or station stood on the spot. A large quantity of pottery, coins, and other Roman relics have been found during the excavations, and amongst them a singular Roman carving, in the common oolite, of three figures, in bas-relief.

Some interesting antiquarian researches are now being made at the village of Sarre, in the Isle of Thanet, in connexion with the Kent Archæological Society, the president of which (the Marquis Camden, K.G.), with Mr. Roach Smith and other local antiquaries, lately visited the scene of operations. In the field where the diggings are going on Anglo-Saxon relics had from time to time been discovered, and at length a thorough research was resolved upon. Numerous, swords, daggers, centres of shields, medals, gold coins, crystals, earthen vessels, &c., have been found; and so far the discoveries favour the supposition that this was the scene of some sanguinary battle.

At Chester, a piscina of an unusual character, of the Mediæval period, its length being 22 inches by 11 inches, has been dug out of the *débris* at the old Feathers Hotel. In the centre of the basin is a grotesque head, with a profusion of hair, and a protruding tongue. The water, which was used to wash the hands before receiving the Sacrament, passed away through the ears into a channel at the back. Near it were found a portion of a drinking-cup, of the reign of Elizabeth, with skull and bones of the elk. During the excavations several fragmentary portions of broken tesselated pavement have appeared, showing evidence of constant use.

The supposed "Roman Remains" at Pershore spoken of by contemporaries, turn out to be a mistake of a local paper. A few *encaustic tiles* were turned up, a considerable number having previously been discovered, chiefly on the site of the destroyed north transept, and a few were found on the south side of the choir, where St. Edburgh's (not St. Edgar's) chapel formerly stood. The tiles are apparently of the fourteenth and fifteenth centuries, and exhibit a variety of patterns, some of which differ from any before observed in this neighbourhood.

In the paragraph sent us from Wells, and given in our last number, it was wrong to use the word "recent" with reference to the discovery of an altar in St. Cuthbert's, as that took place some time ago. The sculpture found in fragments imbedded in the niches is of the finest fourteenth century character. As the fragments have, too, their original illumination in the richest and most delicate pattern-work, it is to be hoped that the greatest possible pains will be observed as to their preservation, especially from "restoration."



Stone cists and kjokkenmoddings, or shell-heaps, have been found at Bennett-hill, Burghhead, Elginshire, Scotland, as was announced by Mr. Roberts, at the Newcastle meeting of savans. The following may be given as the result of the explorations. The stone cists now in existence are two in number, and are situate at the extreme eastern end of the hill. The stones forming the sides of the largest cist are respectively 3 feet 10 inches and 3 feet 5 inches in length, while the skeleton taken from the same measured 5 feet 8

MODERN ARCHITECTURE IN VIENNA.—*Details of House in Jagerzeile.*

or 9 inches. A third cist was discovered by the workmen employed on the railway cutting about twelve months ago. The shell-heaps are also three in number, the largest measuring upwards of 50 feet in circumference. Two of these heaps are separated from the third by a railway cutting. Beneath the stratum of shells, chiefly the whelk, limpit, and mussel, is a dark rich mould, probably formed of decayed animal matter. Mixed among the shells were found quantities of animal bones.

In April last, M. Féraud, an interpreter to the French army in Algeria, having set out from Constantina, in company with an Englishman, Mr. H. Christy, who has been for many years engaged in searching after Celtic monuments, found, on arriving at the sources of the Bou-Marzoug, at 35 kilometres S.W. of Constantina, the ground entirely covered with Celtic monuments within a range of at least 3 leagues radius. There were dolmens, menhirs, cromlechs, and tumuli, amounting to several thousands, scattered about the country. M. Féraud examined more than a thousand of them. The dolmens are surrounded with one or more square or circular walls built of large stones. The slabs used for tables are so placed that one of their corners is higher than the rest, and some are grooved. At one of the corners of some of the stone walls above mentioned there is a menhir; and, lastly, the zone within which all these monuments are placed is surrounded by rows of heavy stones placed upright on the ground, and forming uncovered alleys connecting the dolmens, tumuli, and cromlechs together. Seventeen of these several burial-places have been searched, and found to contain human bones, as well as those of horses and birds; buckles, iron and copper rings, vases and fragments of vases, &c. In three of these tombs the skeletons were lying on the left side, with their knees almost touching the chin, and their arms passed crosswise over the breast, or as dead bodies in Etruscan tombs are placed. Human skulls were placed at the feet. The third tomb contained, besides the bones of a man, those of a horse, with flint implements, and a medal bearing the name of Faustina, who flourished in the year 141 of our era. This Celtic necropolis therefore belongs to the second century of Christianity.

THE CITY ARCHITECT.

We hear with sincere regret, and the regret ll be participated in by many readers, of the ntinued illness of Mr. Bunning, the City archi- t. Rest, abroad, for some months past has not ought the cure that was expected. Let us hope, wever, that it may speedily come to him in his n country. At the last meeting of the Court Common Council, the Town Clerk read a com- unication from Mr. Bunning to the Lord Mayor, signing his office, which he had held for about enty years, and assigning as a reason failing alth during the last two years. Mr. Bunning ated in his letter that while holding the distin- ished position of City architect he had erected veral important buildings, at a cost of three- urths of a million sterling, connected with the ducational, trading, and social interests of this eat City, and he trusted that they would orthily transmit his name as their officer to pos- rity. Among them he referred to the Freemen's rphan School, Billingsgate Market, the Coal xchange, the New Cattle-market, the New City rison, and the Lunatic Asylum—all works of agnitude and of public utility. He referred to ther public services, and in conclusion he asked ne Court, in just and kind consideration of those rvices; to grant him, while it might please God o spare his life, such a pension as they might eem right.

Alderman Dakin, prefacing a motion he after- ards made on this subject, bore his testimony, nong many sympathizing expressions of the ourt, to the fidelity and devotion with which Ir. Bunning had discharged his duties; adding, hat he would leave behind him monuments of aste in the erection of many public buildings, and roofs of judgment in the application of his great alents to matters concerning the well-being of he landed property of the corporation. He oved a resolution expressing the deep regret of he Court that severe indisposition had caused Ir. Bunning to tender his resignation, and their ense of the faithful and efficient manner in which e had discharged the duties of his office. To his a request was appended that he would con- inue to hold the appointment until arrangements ould be made for the due execution of the depart- ent.

The resolution was carried unanimously.

PROGRESS OF THE MAIN DRAINAGE WORKS.

METROPOLITAN BOARD OF WORKS.

At the meeting on the 2nd inst., the Chief Engineer presented the following report on the progress of the Main Drainage works:—

"Spring-gardens, Oct. 1.

"Satisfactory progress continues, upon the whole, to e made in the execution of the several sections of the orks intended for the main drainage of the metropolis. Messrs. Brassey & Co. have now completed about 10½ miles of the middle level sewer and its branches, in sizes rying from 4 feet by 2 feet 8 inches to 12 feet by 9 feet inches. A junction has been effected between the works ssing under the various private properties from Wilder- ess-row to Clerkenwell Sessions-house, and the sewer, th slight exception, is now complete from Old Ford up that point. The Metropolitan Railway has yet to be crossed at Victoria street, the design a single wrought ron aqueduct) for effecting which object is now under the onsideration of the Board. The works for the diversion f the Fleet sewer are progressing as fast as their nature nd the difficulties of the locality and ground will permit. The main line westward of the Fleet, passing along Liquorpond street, Oxford-street, and other leading horoughfares, is, with the exception of a portion by Saf- ron-hill and some minor works, completed. The works of the Piccadilly branch are also in progress. The total alue of the work executed up to this date is about 78,000*l.*, being 20,000*l.* in excess of my last report. Rather more than two miles of the western sewers, of izes varying from 3 feet 9 inches to 2 feet 6 inches to feet circular, have been completed by Messrs. Moxon & Co., at a probable cost of 32,000*l.*, or 6,000*l.* more than at he date of my last monthly report. The northern outfall ewer, with the exception of some portion of the embank- ment, the parapets of the bridges, and the apron in the bed of the river, may be said to be completed throughout its entire length of 5½ miles. The sewage of the high and middle level sewers has now been permanently turned into two of the 9-feet sewers, and is discharged through the tumbling-bay direct into the Thames near Barking Creek—thus permitting the abandonment of the temporary measures adopted in July last for diverting the sewage from the River Lea. The accomplishment of these works has facilitated the testing of the third 9-feet sewer, which has been satisfactory, no leakage being per- ceptible from either the ironwork or brickwork. The total cost of the work done by Mr. Furness under the contract is about 630,000*l.*—15,000*l.* being due to the pro- gress made since presenting my last report. One com- partment of the Northern Outfall Reservoir is completed, and a second is in a forward state. The foundations of the remainder are nearly all got in, and the brick piers and walls are being built thereon. The amount of the work done under this contract by Mr. Furness is esti- mated at 80,000*l.*, or 17,000*l.* more than last reported. At the Crossness pumping Station the engine and boiler- houses, reservoir, culverts, and other works are all ad- vancing. Upwards of 130,000 cube yards of excavation and 65,000 cube yards of concrete have been executed, in addition to about 25,000 cubic feet of masonry. 65,000 superficial feet of York paving have been laid, and 56 penstocks fixed. The value of Mr. Webster's works under the contract is about 147,000*l.*, of which 22,000*l.* is due to the work done since my last report. Upwards of ¼ mile of the Southern Low Level Sewer have been constructed by Mr. Webster, at a cost of about 47,500*l.*, being 23,501*l.* in excess of my last report. Messrs. Aird & Son have completed a length of nearly three miles of the Ber- mondsey branch of the Southern Low Level Sewer at an estimated cost of 86,000*l.*, or 4,000*l.* more than last re- ported. Mr. Pearson is making fair progress with his contract for the completion of the Southwark new street, between Great Guildford-street and the Blackfriars-road. Up to the present date he has completed 1,130 feet of the subway, with about 500 feet in progress, 1,140 feet of sewer, 740 feet of area wall, about 1,200 feet of pipe connexions, and 119 vaults are also completed. The value of these and other works incidental thereto, including about 1,000 yards super. of new granite paving, amounted to 12,500*l.*, 4,500*l.* more than at the date of my last report."

THE COST OF ST. MARY'S TOWER, TAUNTON.

The following has been sent to us as abridged from a statement of receipts and expenditure by the late churchwardens of Taunton St. Mary Magdalene, for the rebuilding of the tower:—

"Receipts.

1857-63.	£	s.	d.
To cash from 'Tower Repair Account'	27	2	8
To grant from the parish, as per vote of vestry	2,000	0	0
To late Charles Haman's legacy and interest	138	12	9
To proceeds of bazaar, August, 1859	1,084	2	9
To balance for premiums and interest on Exchequer-bills	176	7	10
To sale of old materials	19	11	9
To donations—			
Mrs. O'Brien, towards building buttress as a memorial of Col. Dansey £50 0 0			
Friends, by H. Bedcock, towards a new trumpet-stop to organ 10 0 0			
Balance of a fund for procuring telegrams during Crimean war 3 5 0			
A payment by some person unknown 1 0 0			
The whole of the Williton stone by Sir A. A. Hood, Bart., M.P.			
Valuable professional services by the late Richard Carver			
Flag-staff and flag by Downing Blake			
	64	5	0
To subscriptions	5,184	15	6
	£8,693	3	6

Expenditure.

1857-63.	£	s.	d.	£	s.	d.
By cash paid Henry Davis, builder—						
Amount of his contract	5,422	0	0			
,, extra for using Williton stone	361	18	0			
,, carving, as per contract	435	0	0			
,, extras at tower, north porch, &c...	520	11	8			
				6,739	9	8
By G. G. Scott and R. Ferrey, architects, after deducting a donation of 10*l.* from each				484	19	0
By clerk of works, rent of office, &c.				289	10	8
By law-charges				262	2	11
By printing, advertising, and stationery				32	16	8
By accountant's charges				23	5	2
By travelling expenses				37	17	6
By Mears & Co., for re-casting tenor bell ..				83	13	0
By C. Oliver, for clock and chimes				54	5	0
By removing the organ, and entirely remodelling the instrument				401	14	6
By restoring and repairing gas fittings, &c.				24	7	0
By Newall & Co., for lightning-conductor ..				13	1	0
By sundry other bills, stamps, and incidentals				112	11	2
By balance at bankers' (Messrs. Bedcocks')				33	10	6
				£8,693	3	6

This does not include the cost of attempting to restore, nor the railing and gates to inclose. These added, together with the gifts not included in the statement, will bring the figure nearly up to 10,000*l.*

THE NEW BRIDGE IN DERRY, IRELAND.

This new bridge has been opened by the Lord Lieutenant of Ireland. The site is about 250 yards south-west of that occupied by the wooden one. The new bridge is 1,172 feet in length, 30 feet wide, and consists of six principal openings—119 feet each—a double swing-bridge, spanning two openings, of 45½ feet each, and two subordinate openings, 62 feet each, landwards—one on each side of the river. The piers for the principal openings are each composed of two cylinders, 11 feet in diameter, and 24 feet apart, from centre to centre. The pier for the swing-bridge is composed of seven cylinders, each 8 feet in diameter, sunk into the bed of the river, and all enclosed in one large cylinder, 30 feet in diameter. The cylinders are all filled in with concrete. The principal openings are spanned by large girders, placed transversely, 24 feet apart, resting on granite blocks imbedded in the concrete contained in the cylinders. The bridge is a double one, the lower level being constructed for the transit of railway carriages, to be drawn across by horses, and the upper one being designed for ordinary traffic. The upper roadway is 20 feet wide, divided down the centre into two channels by the water tables: on either side of the carriage-road is a pathway 5 feet wide. The height of the railway part over low-water mark is 14 feet, and the depth of water at high tide under the swing-bridge is 33 feet. The bridge is of iron. The new approaches are open thoroughfares, formed from the corner of Bridge-street, in Foyle-street, from the outside of Ferray-quay-gate, and from Bishop-street, on the Derry side, and by a new cutting from the end of Clooney-terrace at the waterside.

BAVARIAN STAINED GLASS IN GLASGOW CATHEDRAL.

We learn that the stained glass required to fill the windows of the west end and north aisle of Glasgow Cathedral has been placed. It has been executed by Mr. Ainmiller, a Bavarian painter of note. Those in the north aisle represent incidents in the life of Job. In the first he is seen undergoing his troubles; in the second, rejoicing in his prosperity, and surrounded by friends and servants. The windows in the west end are on each side of the doorway, and represent, by "compositions," on the one side, Prayer and Thanksgiving; and on the other Early Training and Education.

We lately saw in Mr. Ainmiller's *atelier* in Munich another window in preparation for the cathedral, having Daniel for subject. This is for the south aisle. We also saw there a figure of St. John, for a church in Boston, U.S., very admirably painted. Admit that windows are to be filled with pictures on glass, and Mr. Ainmiller's productions call for considerable praise. His charge, as we understood him, is about 2*l.* per foot superficial; and, when there are many figures, about 3*l.* per foot.

NEWS FROM SCOTLAND.

Dumfries.—The work of preparing the foundation for the new court-house is proving a more extensive and expensive matter than was at first anticipated, according to the local *Courier*. In addition to concrete, timber is being largely used in the foundation. In the bottom of the excavation, battens, 5 feet to 6 feet in length, are laid across, about 10 inches apart: on these are laid two rows of yellow pine logs, 4½ feet over, and screwed with strong iron bolts: the space between the logs will be filled with concrete. There are three interior cross walls, and the foundation for these is prepared in a similar manner; the ends of the logs are bolted to those in the foundation of the outside walls. The work, when finished, will resemble an immense oblong double wooden frame, divided into four compartments by double bars. The extra work on the foundation will add considerably to the cost of the structure.

Pollokshaws.—The new parish church of Pollok has been opened. It is the gift of Sir John Maxwell to the parish, and has been erected on the site of the old parish church, immediately to the west of Pollokshaws. The style of the architecture is Gothic, of the Transitional period. The building has been arranged on a cruciform plan, with nave and transepts, the entrance being through a porch in the base of the steeple, which is placed at the west end of the nave. The church contains sittings for 650 on the area floor, and 415 in the three galleries, which are confined to the north and south transepts, and to the west portion of the nave. The passages being all arranged along the side walls of the church, give a compact appearance to the interior, and prevent unpleasant draughts, besides allowing of every sitter having a full and undisturbed view of the pulpit. The pulpit and precentor's desk are placed on raised platforms against the east wall of the nave, which is extended some 10 feet beyond the transepts, completing the cruciform plan of the church, and giving to it, both externally and internally, says our account, all the effect of a chancel. In the design of the pulpit, a medium has been struck between the open platform of the lecture-hall and the more common inclosed pulpit. The pulpit is in the form of a half-octagon, its three fronts projecting on Gothic corbelling, and each front enriched with moulded cusped and carved panelling. This platform extends the whole width of the nave, and is 10 feet broad. The pews are all formed of open benches, and the roof is of open timbers; all the wood-work being

stained and varnished. The spaces between the roof spars are plastered and decorated with a stencilled diaper pattern in maroon and green, upon a cream-coloured ground: the walls are tinted salmon-colour; and the book-boards of the gallery-front are covered with blue cloth, and the windows filled in with cathedral-tinted glass bordered with blue. The dimensions of the interior are as follows:—Width of nave and transepts, 36 feet; length of nave from east to west, 78 feet; width across the transepts, 72 feet; height of side walls, 24 feet; and height of ceiling from floor, 40 feet; height of ridge of roof, 50 feet. The steeple rises buttressed on each corner to the height of 71 feet as a square tower, with a bell-floor in the upper story, and is surmounted with a simple broached spire, terminated with an iron finial giving an additional height of 65 feet, which makes the total altitude to the spire above the ground 136 feet. Acutely-pointed gables, buttressed at the angles with crozier finials, terminate the north and south transepts, and the east end of the nave: these gables are filled with large traceried windows. The one over the window is 12 feet wide, divided into six lights with stone mullions, which diverge at the spring of its arch into tracery, the centre part of which resolves itself into a figure suggestive of the "Crown of Thorns," the name by which a small window in Melrose Abbey has long been designated, and which the architect had in view while designing this one. The other windows of the church are on the ground floor, their arched heads being filled in with simple plate cusping, excepting two on either side of the nave, which are of much greater height, and assist, with the two gabled windows at the west end of aisle, to light the west gallery. The estimated cost of the building is 3,800*l.* The architects were the late Mr. C. Wilson, and his coadjutor and successor, Mr. David Thomson, of Glasgow. The contractors for the different works were, — Mr. J. M'Intyre, mason; Mr. J. Connell, wright; Mr. R. Neill, slater; Mr. D. Smith, plasterer; Mr. D. R. M'Callum, plumber; Mr. C. M'Laren, glazier; Mr. R. Steel, painter; Messrs. J. M'Haffie & Co., gas-fitters; and Mr. A. Cree, upholsterer. Mr. H. Purnell, Glasgow, furnished the heating apparatus. A bell, weighing fully 17 cwt., has been presented by Mr. Walter Crum, of Thornliebank. Mr. John Wilson was the bell-founder.

Arbroath.—It is proposed to form a company, on the limited liability principle, to carry out the projected public buildings at Brothock Bridge; the capital of the company to be 5,000*l.*, in 500 shares of 5*l.* each. Shares to the extent of fully half the capital have already been subscribed for. The proposal is, that the ground left, after widening the public street towards Grimsby and the harbour, presenting a frontage of about 130 feet, will be made available for the public buildings. It is intended that, on the ground floor, there will be shops and offices; and the public hall, with suitable ante-rooms will be above these. For the hall itself there is space for an apartment of 100 feet in length by about 45 feet in breadth. It is contemplated that the public offices, such as the registrar's office, the offices for the collectors of the various rates, and the offices of the inspectors of the poor, might be made to converge in the building.

Wick.—Whatever be the state of other trades, in Wick, it is said, during the next twelve months, masons and house carpenters will be kept tolerably busy. The following are amounts to be expended:—

New Free Church	£4,000	0	0
Mr. Louttit's Buildings	3,000	0	0
New Court House	5,000	0	0
On the new Harbour, first year	20,000	0	0
Baptist Chapel	1,000	0	0
Total	£33,000	0	0

PROVINCIAL NEWS.

Taunton.—This town has been very considerably improved within the past few years, as in drainage, gas, and waterworks. The villas and houses are well let, as it is a genteel and inexpensive place to live in. Gas has lately been reduced to 4s. 6d. Another new railway is in progress from Taunton, to join the South-Western at Chard. A railway is also projected from this place to Barnstaple. There is a new church, with spire, by Mr. Scott, the gift of the Rev. Mr. Smith. Taunton is the county town of Somerset; and, according to the Registrar General's report, the healthiest locality in England (with only one exception). Besides other advantages, it has good church and chapel accommodation, reading-room and museum, collegiate and other schools, school of art, gymnasium, market, and shops. The town contains about 15,000 inhabitants. Its site is a picturesque and interesting one in the Vale of Taunton Deane.

Reigate.—A site has been selected in the neighbourhood of Reigate for the erection of a large central military prison for the reception of prisoners from Aldershott and the adjacent districts.

Faringdon (Berks).—The corn exchange has been opened for market business, but without any public celebration, which will be deferred until the works have finally passed out of the contractor's hands. The building is of Gothic design, built of native stone, with Bath stone dressings. The principal entrance is embellished with carved female figures, bearing emblems, and mounted on pedestals, covered by canopies, the whole in Bath stone. Carved bosses, illustrative of agriculture, horticulture, and the arts, embellish both the interior and exterior of the structure. Besides the corn hall, there is a suite of apartments for the use of the agricultural library, reading-room, &c. Mr. J. Luker, of this town, was the architect, and his design has been carried out by the builders, Mr. J. Wheeler, and Messrs. Cadel & Son, also of this town.

Basford.—An edifice, in the Byzantine style of architecture, has been erected on the Nottingham-road, between New and Old Basford, for the combined use of the officers of the union and the parish. It is about 60 feet by 45 feet, and, with its grounds, occupies a space of about 3,000 yards. The building contains clerks', collectors', and surveyors' offices, porter's living-rooms, paying-rooms, relieving officer's room, and a board-room, 40 feet by 20 feet, and 17 feet high, adapted for public meetings. Access is had to the building by a porch, intended to be surmounted by the Basford arms, flanked by cornucopias of fruit and flowers. At either side of the porch are triple windows, the piers of red brick, with ornamental arches, the keystones of which are filled in with arabesque tracery. The façade of the upper or first floor presents a series of ten-arched compartments, eight of which are filled in with plate-glass windows, leaving two blanks at either side of the central windows. A cornice projects above the whole, formed by vari-coloured brick, with terra-cotta frieze, and an ornamental pierced parapet. The end elevations of the building are carried out in the same manner; and the back, although plain, is consistent with the prevailing features of the building. The pavement of the halls is of tiles, in buff, red, and black colours, so arranged as to give the appearance of cubes standing on their corners. The railing in front, as well as the gates, will be of wrought iron. The business of the parish was previously carried on in a small and most inconvenient building, and the erection of this edifice is a sign of progress in Basford. The architect was Mr. J. B. Heard, the surveyor to the Basford Local Board; and the builder, Mr. James Acton, of Nottingham. The expense will be about 3,000*l.*

Derby.—The tenders for the erection of the Derby Market Hall and Fish Market have been accepted by the Town Council of this borough. The plans and specification were prepared by Mr. T. C. Thorburn, C.E., the borough surveyor, assisted by a sub-committee of the Market Committee, composed of the architectural members and the chairman.

Manchester. — At a recent council meeting, the subject of a new town-hall for Manchester was mooted. The General Purposes committee have passed a resolution to the effect that a sub-committee to take this subject into consideration should be appointed.

Halifax. — Architectural drawings of the Orphanage now being erected by the Messrs. Crossley, near Halifax, and of the dwellings proposed to be erected at West Hill-park, Halifax, have been exhibited in the town. The latter gives a bird's-eye view of West Hill-park as it will be when the whole of the contemplated dwellings have been erected. The houses will be about 200 in number, and will be divided into four classes. When completed, they will have the appearance of a small model town, and the drawing now on view includes a place of worship and a school. It is understood that the erection of thirty-two of the houses will be commenced shortly. They will belong to the fourth class, will cost 160*l.* each, and are expected to be ready next spring.

"The Art Journal."—The *Art Journal* of the month contains, with its usual fine prints, a notice of the sculpture in the late International Exhibition, with wood engravings of thirty-two of the works.

CHURCH-BUILDING NEWS.

Nottingham. — The foundation stone of S Saviour's Church, Arkwright-street, was laid o the 28th ult., by the Bishop of Lincoln. Th church will be of Decorated Gothic character, an consist of nave, aisles, and chancel. The lengt of the church will be 74 feet; width of nav 24 feet; width of aisles, 17 feet. The chanc will be 30 feet deep by 24 feet wide. The aisl are divided from the nave by an arcade supporte on octagonal piers with carved caps. There wi be a clerestory, with ten triangular windows o each side. The roofs are to be of open timbe work, with the spandrels of the principals filled i with traceried work. The entrances will t through a porch at the west end of the nort side, and at the west end of the south side re spectively. The chancel seats are to be filled i with open tracery: the nave seats will hav moulded ends. A five-light window is to be place at the east end of the chancel. The other window are all to be two-light windows. A tower of thre stages, surmounted by a spire of timber work slate in coloured bands, will be placed at the south-we corner of the building. The gables will be finishe with ornamental crosses. The material to be use is Bulnell stone, with Ancaster stone dressing Messrs. Sutton & André, of Nottingham, are th architects; and Mr. J. Barker, of Nottingham the contractor.——The chief stone of St. Ann Church, St. Ann's-well-road, has been laid by Ea Manvers.

Tunstead.—The church here has been restore and re-opened. The exterior of the edifice ha been by degrees put into order, a new roof put o the windows restored, and the chancel re-seated the expense of Mr. Mack, a former vicar, and th resident owners and occupiers. These improve ments made the old pews and benches appear mo unsightly than before, and the succeeding incun bent, the Rev. H. J. White, with the consent the parishioners, determined to remove them soon as possible. The old pews and benches we swept away, and the new seats were being erecte when the vicar and his wife suddenly died. Th work of restoration, however, was not delaye the new vicar, the Rev. G. H. Harris, carryin out the plans of his predecessor. The bench are all of oak, and the pulpit is carved, and stan upon a stone pedestal on the north side of th chancel arch. The lectern was the gift of M Cornish, the builder. The font, from the desig of Mr. R. M. Phipson, of Norwich, the architec has been executed by Mr. Moore, of Nort Walsham.

Leicester.—A chapel has been erected an opened on No Man's Heath. The contract, whic was taken by Mr. G. Radford, of Haunton, w for 337*l.* 10s. The designs for the building we by Mr. G. E. Street, of London. The walls a of brick, both inside and out: the doorway, wi dows, and bell-turret are of stone. A strin course of stone runs along the walls, below th windows, externally, and below the windows the chancel inside. The length of the nave of th chapel is 12 yards by 6 yards, and the chancel 6 yards in length, and slightly narrower than t nave. The chancel arch is of stone, with moul ings and without capitals. Between the arch a the dripstone above it is a row of stones, inla with black crosses and circles, red and black bric intervening between the stones. The east windo is a sexfoiled circle. The sill of one of the sou windows is formed into a piscina, and that of t other is the credence-table. In the nave are t windows, of three divisions each, in the sou wall; a similar one in the north wall; and west window of two lights, with a cinquef opening above. The wall-plates lie upon a corni of projecting bricks. The floors are of red, blac and yellow tiles. The choir seats and pulpit s very plain, and there are chairs for the congreg tion instead of benches. Externally, the sou elevation is the best. The door is of oak, wi spreading iron hinges, and on each side is a bu tress. Another buttress strengthens the wall wh the chancel arch thrusts. The roof is of variou coloured tiles, arranged in a pattern with orn mental crest tiles.

Stow.—It is proposed to restore the church St. Mary, at Stow, which is the mother church this diocese. An appeal has been issued, stati that Stow Church is a structure of greater in rest than any other in the county of Lincoln. T appeal is made under the sanction and patrons of the bishop. The sum required will be betwe 4,000*l.* and 6,000*l.* It is hoped that the wo may be commenced next spring.

Cambridge.—St. Clement's Church has been opened. Extensive alterations have been made

e interior. Most of the old pews have been placed by open seats of stained deal, designed d executed by Messrs. Bell, of this town. The or of the chancel has been laid with tesselated vement, and, though a trifle lower than it was, still raised by four steps above the level of the ve. The east wall of the chancel has been hung ith tapestry; and in place of the old communion- ble is a new one of oak, set upon a foot-pace, id furnished with a covering of velvet and cloth. he old screen which formerly shut in the chancel is been removed, and its place supplied by a very ght one of iron and brass. The new seats are ain. Want of funds rendered it necessary, for ie present to leave some of the old square pews the side aisles.

Farnham (*Suffolk*).—A subscription has been t on foot for the purpose of restoring Farnham ll Saints' Church, which has fallen into a very lapidated condition. The following tenders ve been received for effecting the required reno- ation :—

Thoday & Clayton	£1,784 0 0
Jackaman	1,694 17 4
Frost	1,574 14 0
Rednall	1,579 1 10
Andrews	1,504 0 0
Farrow	1,487 14 0

Hayward's Heath (*Sussex*). — Mr. Fabian, of righton, the contractor for the erection of the ew church at Hayward's Heath, is making pro- ress with his work, and the corner-stone will be id on the 12th instant. The church will be amed after St. Wilfrid, the patron saint of Sussex. hen completed, standing as it will upon high round in an open country, it will be seen for iles around. Considering the growing import- nce of Hayward's Heath, the numerous villa and ther residences which have recently sprung up the immediate neighbourhood, the several sales land of late for building purposes, and the dis- nce from the churches of Lindfield, Cuckfield, id Wivelsfield, the erection of a church here is aturally regarded with satisfaction by occupants id visitors.

Pewsey (*Wilts*).—The new cemetery in the arish of Pewsey has been consecrated by the ishop of Salisbury. The chapel is First Pointed style, and is built of Murhill stone, with bands f Pennant. There is a small tower and spire at ie north-west angle, and a robing-room is pro- ided. The whole of the buildings have been rected from the designs of Mr. C. J. Phipps, of ath.

Woodchester.—A church has been erected in is parish. The edifice consists of a nave, chancel, id a north aisle. A tower 126 feet high is laced on the south side, and the line of this side broken at the junction of the nave and chancel y a projecting vestry and organ chamber, which re entered from the outside by a flight of steps id an open staircase. The windows, which are umerous, also give character to the exterior. The ide windows contain two lights each, the heads eing large quatrefoils, French in style. The east id west windows are much larger, and the heads hibit more elaborate tracery, while the organ amber contains a rose window. The tower has lso several windows and openings: the broach pire has four niches or tabernacles just above its unction with the tower, and openings at intervals lmost to its apex. The building is entered by a w doorway in the west front, and through a outh porch which almost fills the angle formed y the projection of the tower and the nave: this lighted by an open double arcade. Entering ie interior it is found to be divided by five arches esting on clustered marble columns. The con- olvulus, water-lily, fern, and other wild plants of ie neighbourhood, have been reproduced in the aliage of the capitals. The roof is of oak, of very igh pitch, and supported on hammer beams. The eams of the chancel terminate in carved figures epresenting a choir of angels. There are four ainted windows. One, in the south side of the hancel, is to the memory of the Rev. Dr. Williams, ormerly incumbent of the parish: it represents ie Church triumphant, the faithful minister isiting the sick, and administering the Sacrament. second window in the south side is to the emory of Basil Williams, B.D. It represents our incidents in the life of St. John, one figure eing the Angel of Death. A third window, ad- ining the last, consisting of three lights, repre- nts the Annunciation, the infant Jesus, the rucifixion, the Ascension, the day of Pentecost, nd Jesus in glory. It has been erected to the emory of John Woolwright, and Wilhelmina, mily, and Julia, his three children. The fourth indow, a single light, represents the Holy amily, and is the gift of the architect of the hurch, Mr. Teulon. The first three windows are the work of Mr. Preedy: the fourth is by Messrs. Lavers & Barraud.

Llandyssil.—The foundation-stone of the new parish church has been laid. The new church is to be a Gothic structure, with a nave 67 feet long, and 22 feet wide; also a side aisle, to be carried on marble columns and stone arches. It is to have a chancel, 26 feet long by 17 feet wide, with a tower and spire. The church is to contain sittings for 362 persons, and to cost about 2,400*l*. It is being built from plans drawn by Mr. T. Wyatt, of London, architect; and the building of it is entrusted to Messrs. T. W. Chester & Son, of Liverpool. Mr. T. Garland is the resident clerk of the works. It is also intended to build a school and master's house, attached.

INA'S PALACE.

I BEG to inform your correspondent "F. S. A.," that two or three years ago I made careful measured sketches of the charming little building known as Ina's Palace, both generally and in detail.

I quite agree with him on the subject of the late perverse mutilation. The person's folly is shown in every way, for it can never be a fit place of residence, being so damp. Although it was in the middle of summer when I was there, yet the well under the dresser in the kitchen was full of water, almost to the brim.

PHILIP E. MASEY.

STEERING THE "GREAT EASTERN."

SIR,—In your last number I observe a suggestion from Mr. Walcott, proposing the removal of the present paddle-wheels of the *Great Eastern*, and placing instead three smaller ones on each side. As this would, no doubt, be an expensive operation, permit me to suggest a more economical contrivance, viz.—the placing of a double-bladed paddle or *fan*, immediately above the fore-foot, to be worked athwart ship, or at right angles to the keel, in the direction required for the ship to turn. This paddle could be worked by gearing carried forward from the present paddle engines, and when not required, could be brought to bear and secured by a system of screw, with catch-box to receive blade, to offer no resistance to retard the progress of the ship.

Liverpool Dockyard. J. E. WILLIAMS.

MATTER FOR THE HISTORY OF THE REVIVAL OF GOTHIC ARCHITECTURE.

DEAR MR. EDITOR,—Do, pray, let me write a touching little chapter. The "revival of Gothic architecture" had spread throughout the length and breadth of the land. It had infused a spirit of talented imitation, and an enlightened gleaning up of precedent, both in the English and Roman Church, and also amongst the various and diversified denomination of Christendom; and great was the reputation of the architect who could point to this and that work he had "carried out," as being after the famous cathedral at "Chairo Oscuro," or the beautiful old parish church at Requiescam in Pace, or the much-admired slantindicular chapel built in the eleventh century, at Middle-cum-Farthingale. Such was the strength of this "revival" in the Established Church, that in the matter of small towers and spires great was the rise thereof. Nor were other sects backward in imitating the imitation. In the Social Society, for instance, a great stir was made about it. It was hard, at first, to get people out of their conventicle chimney pot and tubular-truncated notions of chapel building; but, at length Dr. Jobbins was "raised up," who, having had the felicity to be an architect's clerk before entering the ministry, took up the advocacy of the subject, and at length brought forth a book in illustration of his views both by pen and pencil; showing, in high contrast, the *"usual"* chimney-pot style prevalent in their society, and the more appropriate *"Gothic style."*

Gothic Ecclesiastical Architecture undoubtedly owes much to the labours and researches of this (physically) great man. Had Dr. Jobbins lived in the present age, what a source of gratification to him would it have been to witness the results of his strenuous exertions, in the pains that are taken to prop up the hallowed walls, and tie together the falling roofs of those buildings which were the result of his peculiar appreciation and advocacy of the "Gothic style." While paying this tribute to the memory of Dr. Jobbins in connexion with the revival of Gothic architecture, it may not be amiss to allude to the means by which so much was done in the Social Society to advance this important movement.

Dr. Jobbins, in conjunction with an eminent architect and F.G.H.A.B.C., who came from Bath (the date of whose return to that city is uncertain), caused many chapels and schools to be built in the "Gothic style." These two gentlemen being collectively and individually somewhat unacquainted with the principles of construction demanded by this "style," or with the principles in the abstract as is supposed,—attention having been much absorbed by the contemplation of the F. G. H. A. B. C.,—the buildings erected occasionally fell down, all but depriving future generations of those monuments of skill and genius and of those landmarks (which let us be thankful still exist) pointing (the architecture being pointed) towards a haven of architectural triumph.

In spite of obstacles such as these, which had to be overcome by dint of labour and force of genius, the revival spread. A "model" chapel was arrived at on which subsequent erections were to be founded; and this model chapel, even after the tremendous lapse of time that has intervened, still stands in the town of Shockingem, an example to the people of that favoured locality and to the architectural world of what may be achieved in ecclesiastical art when the glorious models of the Middle Ages are copied and adapted; constituting models for future generations to admire and imitate; thus perpetuating the perpetual perpetration from generation to generation. As evidence of the utility of this justly celebrated model, it has been imitated in numerous instances, even to the very patching and propping up which invariably accompany the peculiarity of the style. "This building," says Dr. Jobbins, in his luminous work, "was built after the emulsions of Gargoyle Whatsisname, Esq., F.G.H.A.B.C., Architect, of Bath, and received the prize of fifty guineas, as being, in the judgment of the Model Plan Committee, the best design submitted to them for a chapel in the Gothic style." The building is "thoroughly consistent with the period of its style," a consistency upheld by Dr. Jobbins and others, and the more remarkable considering the inconsistency of the consistency. In describing this celebrated building (and for the sake of those who have not had the privilege of seeing it, the doctor's description will answer), the doctor says the "Chaste and pleasing appearance of the angular turrets will not be fully inferred from the engraving." The fact is, that this chaste appearance can only be inferred from a visit to the place; but for those who wish to witness this chastity at its real source a visit to the little Mediæval chapel of Middle-cum-Farthingale, from which this feature is copied, will equally answer. "The front is divided," says the doctor, "by bold projecting buttresses;" a boldness, by the way, if criticism may be allowed after the doctor's excellent criticism, strikingly illustrated by the cupola with louvre at the top—(no, not "strikingly," for there is neither clock nor bell nor anything of a striking nature in it); which, not knowing what else to put there, the architect *boldly* put; and there it remains to this day — lapse of time, as before remarked, notwithstanding. The side windows are taken from the cathedral and church at Magnum Bolus; the flowing, wave-like tracery of the parapet, from Florabella Abbey Church; and the large central window divided into four lights, from the Priory Church of Duplicando-et-Multum-in-Parvo. The interior of this edifice is carried out in a somewhat similar revival spirit. "The roof," Dr. Jobbins informs us, "has been pronounced by the most practical judges to be safe and good," which, in addition to the views of Gargoyle Whatsisname, esq., F.G.H.A.B.C., is satisfactory.

There is one feature about the internal construction of which Dr. Jobbins appears not to have taken note, and which feature has been thought worthy of being repeated in other structures of the same class,—and seems an idea the original credit of which is due to Gargoyle Whatsisname, esq.,—and that is the manner in which the ceiling is "hoved up" (as the mother of Francis Bacon says of the stomach of a dropsical subject) to make way for the large central front window, which otherwise it would have been difficult to work in.

After the erection of this model chapel numerous chapels and schools were built under the superintendence of the F.G.H.A.B.C., or after the "model." Features both of an ornamental and constructional character were imitated and repeated even to the tumbling down, propping up, and tying together; and those that did not tumble

quite down still stand as monuments of skill and imitative genius, and of the revival spirit of the period to which this historical sketch alludes. The "bold" gables and buttresses from Cockstraddle Abbey, the chaste crocketed pinnacles and bell-less bell-turrets, from the beautiful little church of Barnaby-Dickens, and the flowing window tracery from Flamblazingford, sprang up and developed themselves like mushrooms, of which more anon.

HI JACULIS ILLI DEFENDERE SAXIS.

THE LUDGATE HILL VIADUCT.

SIR,—If it is not too late, permit me again to draw your attention to the much-worn subject of St. Paul's Cathedral and the Ludgate-hill Viaduct. When you did me the honour to publish a letter which I addressed to you some six months ago, and in which I expressed my belief that the bridge was *inevitable*, and suggested that, if inevitable, it should be made a really grand monumental work, you made a note at the end, thus:—"Is it inevitable?" and I heartily wish, sir, that your doubts had been confirmed, and that I had been entirely in error; but it now seems that I was not very far wrong.

We are to have the bridge; and, from your impression of the 12th ult, it seems that people are not quite unanimous as to its beauty. Mr. Haywood objected to it; and probably he was, of those present, the most competent to give an opinion. Of its merits I know nothing, not having seen the design; but the rumours of "ornamental iron" are enough to strike terror into every one who reflects what has been put up of late under that name in the shape of bridges. I have no prejudice against the material itself, but only regret the offensive erections recently designed by engineers.

These latter gentlemen have lately put up works in iron which, however great their *science*, are a disgrace to an age in which all the *arts* have so rapidly advanced. But there is no public officer to put a veto upon them, and to save us from being outraged: there seems to be absolutely no redress: and London is being everywhere made hideous, both in its streets and on the river. Should not some of the leading architects be called in to help us out of the Ludgate-hill "difficulty?" or cannot there be an open competition? As I said before, "whatever is once there, is there for ever;" and therefore it is surely worth while to use every exertion to procure the best design that can be had. H.

GOOD OLD FLAT CEILINGS; OR THE WHITECHAPEL DISCOVERIES.

THE revivers of open timber roofs of thirty years ago little knew, perhaps, at that time, what serious evil they were preventing in their warfare against flat ceilings and aisleless churches. And we little know to what extent Whitechapelism may not have been carried out in those *good old* churches built between 1700 and 1840.

With the exception of St. Paul's and Westminster Abbey, with their spacious and (to visitors) *inaccessible* triforia, the oldest church in London with a false ceiling is that erected by the equally *false* piety of Francis Duke of Bedford, in Covent Garden. Some of Sir Christopher Wren's churches are similarly commodious; but most of these being divided into nave and aisles, the roofs have not rise sufficient to make them easily accessible for the above-named purposes.

In the last century, the parish church of Islington was rebuilt, with an open timber roof of great beauty; but, for some reason, a flat ceiling was put under it; whether because it was in character with the building, or better for sound, or more convenient for some purpose not desirable to be made known, I cannot tell. Whatever was the reason, I have no doubt but that this church will be carefully examined, as well as others having flat ceilings accessible from the belfry.

The following are the principal churches thus constructed, in London and its suburbs; and it may be as well at once to direct the eye of the public towards them:—St. Anne, Limehouse; All Saints, Poplar; St. Alphage, Greenwich; Audley-street Chapel; Brunswick Chapel; Brompton old Chapel; St. Botolph, Aldgate; Christ Church, Southwark; Curzon Chapel; St. Edmond, Lombard-street; St. George in the East; St. George, Bloomsbury; St. George the Martyr; St. George, Camberwell; St. George, Southwark; St. John, Waterloo-road; St. Lawrence, Jewry; St. Luke, Norwood; St. Mary, Islington; St. Mary, Fulham; St. Mary, Newington Butts; St. Mary, Rotherhithe; St. Mary, Kensington; St. Matthew, Brixton; St. Mark, Kennington; St. Paul, Clapham; St. Pancras, New-road; Park-lane Chapel; St. Paul, Covent-garden; Quebec Chapel; Regent-square Chapel; Stockwell Chapel; and many other Episcopal chapels and meeting-houses in London and its suburbs, as well as in most larger manufacturing towns and watering-places.

In smaller provincial towns are—All Saints, Lewes; Trinity, Ipswich; St. Cuthbert, Carlisle; three churches at Whitehaven; All Saints, Oxford; All Saints, Derby; St. Mary, Lichfield; St. George, Gravesend; Parish Church, Woolwich; St. Giles, Cambridge; and in most towns where there are several churches at least one will be found with a flat ceiling covering the whole building. W. SCARGILL.

* Examined, and found guilty.

HOLBORN HILL IMPROVEMENTS.

SIR,—It may not be uninteresting to your readers at this time to be in possession of the following memoranda of the various schemes for the improvement of Holborn-hill, which I believe commenced *(on the viaduct principle)* with my own, made in 1832. In 1833 I petitioned the corporation to permit me to lay my plan and model before them, which were under consideration in March and October, 1839. In 1836 Messrs. Burnard & Geary planned similar improvements by means of a viaduct, but placed it on the north side. In 1838, in the second report of the Metropolitan Improvements, my plan is published, and also one by Mr. Pocock, designed by him in 1836. In 1845 Mr Wishaw designed a deviating line of traffic by a viaduct running at the back of St. Andrew's Church, over Farringdon-street. In 1839 Mr. Thomas Taylor designed a viaduct improvement on the north side, taking rather a diverted course. In 1858 Mr. F. Marrable designed a viaduct line, also on the north side; and I may be allowed to add that in February, 1842, a paper I had prepared upon the various suggested improvements of Holborn-hill up to that time, was read at a meeting of the Institution of Civil Engineers. In 1853 Mr. Cubitt (late alderman) showed me a model for a viaduct on the south side, but I am not aware if he made his design public: his plan, as nearly as I recollect, was identical with the one I had made.

J BIN TURNER, Architect.

COMPENSATION CASE.

Charing Cross Railway and E. Denenholm.—This claim (at Sheriffs' Court, Red Lion-square) was for compensation for loss of light and air in respect of the house No. 41, Craven-street, in which the claimant carried on the business of a lodging-house keeper, and of which she has a lease for twenty-six years, at a rental of 90*l.* 10*s.* per annum. Mr. Hawkins, Q.C., and Mr. Mellor, appeared for the company. Mr. Kidd for the claimant.

The sum claimed was 975*l.*

Mr. Bull, as surveyor for the claimant, valued the house at 30*l.* per annum before the railway was commenced; and now values it at 240*l.* Mr. Broadbridge, surveyor, supported Mr. Bull.

The claimant and her daughter proved the profits of the business. The company had in attendance Mr. Ryde, Mr. George Pownall, Mr. Charles Lee, Mr. E. N. Clifton, and Mr. Marrable, but they were not called.

The jury gave a verdict for 150*l.*

THE STAGE.

New Adelphi Theatre.—The new piece, "Leah," and the new actress, Miss Bateman, have proved very successful. The piece deals with the persecutions to which the Jews were subjected for long years in Servia, as well as elsewhere; and though in parts a little gloomy, is interesting and exciting. Miss Bateman has considerable power over the emotions of her audience, and is statuesque and graceful in her *poses*. Mr. Billington acts in the drama remarkably well. Mr. Callcott has painted some scenes for the piece; and they are so good that it is the more to be regretted the "raggedness" at the sides and top which unfortunately disfigures so much of our scenery, and destroys all illusion, should not be obviated.

Princess's Theatre.—Herr Hermann, the quick-fingered, as he calls himself, is uncommonly neat and perfect in his operations. The majority of his tricks, such as the production of basins of water from an empty handkerchief, have been performed by others; but by none better. He varies his entertainment with some imitations of singing birds.

PATENTS CONNECTED WITH BUILDING.*

APPARATUS FOR CURING SMOKY CHIMNEYS. *C. B. Clough.* Dated 3rd January, 1863.—This invention consists in adapting to the outside of any ordinary earthenware or other chimney-pot a covering of zinc, or other suitable metal or material, surrounding such pot, and leaving an annular space between the pot and the outer casing, which should extend to the top of the pot. At the base of the casing, and on diametrically opposite sid thereof, the patentee forms two vertical ape tures, and he divides the annular space by placin partitions in the space between the pot and th casing, midway between the opposite opening The wind, entering one of these openings, is pr vented from escaping through the opposite ope ing by the partitions above mentioned; and, co sequently, an upward current of air is carried ou side the pot on the windward side of the chimne

LIGHTING HALLS, THEATRES, &C.—*E. J Keeling.* Dated 5th January, 1863.—This inve tion relates to the diffusion of intense light, an to the prevention of shadows. The patentee tak an electric light, a lime light, or other source intense light, and places it in some elevated spo above the space to be lighted. Under or befor or part under and part before, this light, he su pends or fits a plain white, tinted, or colour curtain or screen; and again in some instances h places under or before, or part under and par before, a ceiling of glass or other transparen medium. By these means he removes the ot stacles that have hitherto prevented the successf application of the electric, lime, or other intens lights to the lighting of the interior of large room and public edifices.

COLOURING, BRONZING, AND PRESERVING IRO AND STEEL. *H. A. Bonneville.* A communic tion. Dated 20th January, 1863.—The patent claims, first, the creation at the surface of th iron or steel of an adherent coat of peroxide iron. Secondly, the transformation under the i fluence of water, at an elevated temperature, the peroxide of iron into black oxide, which is le oxidised. Thirdly, the renewing of the operatio until the black coat is sufficiently thick and a herent. Fourthly, the immersion of the articl in a bath of luke-warm water, for the purpose removing the acidulated or saline particles a hering to their surfaces, so as to allow of the being greased with olive oil.

LOCKS. *W. H. Tucker.* Dated 9th Januar 1863.—This invention consists, first, in a mode preventing the positions of the gatings in th levers or tumblers of locks being felt or asce tained, by the aid of end pressure directed again the bolts of the said locks; and the patent produces this effect by the use of a moveab lifting piece, so constructed and disposed in th lock that, if end pressure be directed against th bolt, the said piece will be so influenced by it th a pin or stump in it will lift or gather up th levers or tumblers in a mass, and thereby preve their being acted on separately by picking instr ments, so as to feel or ascertain the position their gatings. Secondly, in modes of constructi and connecting the knobs, roses, and spindles locks in such a manner that their requisite firm ness of hold to the doors to which they a attached, and their ready and accurate adjustme to their varying thicknesses, shall be mo effectively combined than has heretofore be the case.

MACHINERY FOR CUTTING CLAY IN THE MAN FACTURE OF BRICKS, TILES, ETC. *J. G. Dahll* A communication. Dated 6th January, 1863. This invention consists in mounting upon a frar with wheels, for travelling on rails or trams, a s of rollers covered by an endless belt, which b receives the clay from another set of rollers, on which it is expressed from a moulding machi At the further end of the rollers other rollers a fixed, and over them a frame capable of transve motion. Between the endless belt and transve frame a cutting wire or blade is placed, and t far end of the transverse frame is provided wit door, which usually remains closed, but whi may be opened when required. The endless b rollers and the transverse frame are all connect to the wheeled frame, and are capable of bei moved to and fro. On the clay being fed fr the moulding machine, it travels along the endl belt, and its outer end abuts against the d before mentioned. The cutter is then brou into action, and severs the clay between the e less belt and that contained in the transve frame. Then the transverse frame is pulled laterally, whereby the clay is brought into cont with, say, three, cutting wires or blades, and three portions of clay so cut, say, bricks, removed ready for being stacked. In be pulled out, the frame fails, and the clay, continuing to issue from the moulding machi is received on the rollers over which the transv frame has been drawn. On the frame being turned to its original position, it rises over rollers, receives the fresh charge, which is seve as before, when the frame is again pulled out, so on. It will be understood that the block clay drawn out by the transverse frame may

* Selected from the lists in the *Engineer*.

vided into any desired number of parts, accordg to the number of cutting wires to which it is posed in its lateral travel.

Making Sash Frames and Sashes, and suspending the same by Atmospheric Pressure. *J. W. Meears.* Dated 21st January, 1863.—For the purposes of this invention, instead of sustending and working the sash, as at present, by nes, weights, and pulleys, the patentee fits it with bes of elastic material, charged with atmospheric r or with gas. These tubes are attached to the sh, one on each side thereof, and (when working with the sash) they slide up and down in correspondng grooves or recesses in the jambs or fixed sashrame or window-frame, and thus retain the sash t any required height in the frame. Each such roove or recess may be semicircular or semilliptical in horizontal section; and when the sash is in the frame each recess in the sash has opposite d a corresponding recess in the fixed sash-frame or amb: such two opposite recesses, when together, rm a cylindrical or elliptical space in which he tube fitting closely, one half in the sash groove and the other half in the frame or jamb groove. The tubes are made of caoutchouc, gutta-percha, r of caoutchouc or gutta-percha compounds, or of ther flexible and elastic material, and are hermecally closed or secured at both ends. They are harged, by pumping or otherwise, with air or gas, nder such pressure as may be required to sustain he weight of the sash, by means of any suitable pparatus for injecting the air or gas, and closing he same when filled, as is well understood.

Apparatus for cutting Metallic Tubes or Pipes. *T. C. Barraclough.* A communication. Dated 15th January, 1863.—This apparatus consists of two metallic jaws—by preference made of malleable or other elastic description of cast iron r steel—hinged together at one extremity, and so formed near the hinge or joint as to receive the pipe to be cut at right angles to the cutter employed. To these jaws, at the further end to the hinge, two steel or wrought-iron rods are attached. The cutter, which is made of steel, slides vertically through one of the jaws, and its cutting force or pressure may be adjusted by means of a thumbscrew above it. The pipe to be cut is placed in the hollow made for its reception, the two opposite ends of the rods brought nearly together, and secured by a link, links, or other substitutes, the said jaws being thus caused to hold the pipe, and the cutter is tightened thereupon. If now the pipe be held firmly in a vice, and the apparatus turned several times round in a direction at right angles to the axis of the pipe, the cutter will penetrate the material and dissever the tube. If the metal or substance of which the tube is made be very thick, more pressure is to be applied gradually to the cutter by means of the screw until it is cut through.

Wrought-iron Casements. *J. H. Johnson.* A communication. Dated 14th February, 1863.—In carrying out this invention, as applied to a French casement, the two side frames are rolled of an angled form, and have strips of wood secured to them, which fill in the aperture in the masonry to which they are to be applied. The bottom of the sash-frame consists of a bar curving outwards, so as to carry off the rain, and is secured at each end to the side frames by rivets, a similar mode of attachment being employed in securing the ends of the top part of the frame, which is in the form of a flat bar, having a raised rib or web rolled thereon near its lower edge on the inner side. Each sash is hinged to the frame by having tubular sockets screwed thereto, which drop into hinge-pins in the frame, a hinged piece capable of being turned up when required serving to lock the sockets down upon the pins, or to release them when the sash is to be lifted off its hinges. The bottom bar of the sash is connected with the vertical bars by a mortise and tenon joint, and a somewhat similar plan is adopted in the upper bar, which plan is also used for the intermediate bars. The bottom bar curves outwards so as to throw off the rain, and a flat grooved bar is riveted to it, which closes against and interlocks in the bottom bar of the window-frame, a strip of india-rubber being interposed to keep the sash weather-tight. The outer edges of the vertical sash-bars are rebated so as to close over two faces of the side-bars of the frame, and the two adjoining vertical sash-bars are bevelled in order to fit accurately together when the casement is closed. A longitudinal groove or channel is made in one of these bars, into which a strip of india-rubber is inserted, for the purpose hereinbefore described, a corresponding rib and groove on the opposite bar locking into and bearing upon the india-rubber in the groove of the bar last referred to. The window-frame is kept closed by an espagnioletto or French casement fastening, the rod of which is fitted to the sash-frame by means of two hinges let into the frame. It is provided at the top and bottom with a hook, which hooks, when closed, engage into corresponding notches in pieces attached to the opposite sash. Through the centre of the rod is passed the spindle or axis of the handle, on the end of which is fitted a latch which, when the handle is in a vertical position, presses upon the vertical bar of the opposite sash, and thereby causes the two sashes to bear throughout their entire length against the sash-frames.

Chimney Tops. *J. Durant.* Dated 17th February, 1863.—On the tapering can or top of a chimney the patentee mounts a six, eight, or other sided figure, of a slightly tapering form, the smaller end being uppermost: this part, which he terms the body, is much larger than the chimney top before mentioned, which he denominates the base. This base, however, he makes no longer than is conveniently necessary to reduce the square form of the flue below to a round form at the upper part: the body-part is down upon and envelopes the base to about a third of its length, and is, by suitable bracket-pieces or stays, fixed securely thereto. At each of the angles of the body are projecting radial leaves or plates, extending to the whole height of the body. These leaves he forms hollow, to allow the passage of air up the interior; and, being bent to the form of the same sheet of metal, gives stiffness and strength to the structure of the body. At the lower part of the body, and throughout the extent to which he envelopes the base, he forms openings of large area, and fits thereto inclined surfaces, which spring from the bottom and larger diameter of the body, and are carried up to the smaller diameter, near to the upper end of the base. These openings are altogether below the top of the base, terminating a short distance below that point. The effect of wind striking against the sides of the body, and entering these openings, is to enter and drive itself in an upward direction in the chimney top, creating an upward current therein, and carrying the smoke with it out at the top.

Fabrics for Covering Floors, Walls, Roofs, &c.—*H. H. Henson.* Dated 27th January, 1863.—One part of the present invention consists in an improved combination of the compounds of india-rubber, gutta-percha, or substances having similar properties, and cork dust, peat dust, ground leather, ground tan, flock, oxidized oil, boiled oil, gums, resins, umber, litharge, or other similar or fibrous materials, with a certain class of woven, plaited, or netted fabrics of considerable strength and substance, such as cocoa-nut fibre, or other matting, the plastic or other compound being applied as an outer coating to one or both sides of the textile fabric. Another part of the invention consists in manufacturing a new fabric consisting of any of the before-mentioned compounds of india-rubber, gutta-percha, or similar substances, with other materials, such as pigments, for forming the under-surface of any suitable woven, textile, felted, netted, or other fabric, such as the fabrics called "scrim," "canvas," or "hessian," and any compound of oxidized oil or boiled oil for the upper surface, or *vice versâ*, such compound of oxidized or boiled oil being formed by boiling with the oil any description of gums or resins, in greater or less proportions, with an admixture of fibrous or other materials, such as cork dust, peat dust, ground leather, ground tan, flock, litharge, umber, and other pigments, according to the purpose to which the fabric is to be applied. Another part of the invention consists in manufacturing "kampilicon" of two layers, of which the lower layer is composed of a mixture of Trinidad pitch, india-rubber, gutta-percha, and cork, while the upper layer is composed of india-rubber, gutta-percha, or similar substances or compounds, of oxidized oil or boiled oils, with gums or resins, with the admixture of such materials as are capable of receiving dyes, such as flock, cocoa-nut fibre dust, leather waste, ground tan, hair, wool, or other similar material.

Revolving Shutters.—*S. W. Francis.* Dated 28th January, 1863.—These improvements consist in constructing the laths or plates of revolving shutters that such shutters may revolve in either direction around the roller to which they are attached; and for this purpose the patentee forms a groove in the bottom or lower edge of each lath or plate, and along the entire length of each lath or plate of which the shutters is composed (except the bottom lath of each shutter), and he constructs the upper edge of such lath or plate thinner than the lower edge thereof, to fit into the groove in the lower edge of the lath or plate immediately above it. He then unites the several laths or plates, of which the shutter is composed, by means of belts, webs, chains, cords, or wires, passed through holes or mortises in the breadth of each lath or plate in the usual manner.

Books Received.

An Inquiry into the Nature of Heat, and into its Mode of Action in the Phenomena of Combustion, Vaporization, &c. By Zebah Colburn. London: Spon. 1863.

On the very debateable question, What is heat? we have here a thoughtful and suggestive treatise, in which various hypotheses that have been entertained as to this question are brought under review, and dismissed as unsatisfactory,—even Professor Tyndal's (if we can rightly call it so), that heat *is motion*, being here regarded,—as it was in the *Builder*, by the way, on review of his book,—as not quite unobjectionable either. Mr. Colburn's own hypothesis is, that heat *is force*,—*repulsive* force; but there is no novelty in this idea any more than in the others. Sir Humphrey Davy expressed his opinion that heat is "the power of repulsion;" but it did not occur, even to Davy, that there must be some special *reason* why "the power of repulsion" assumes at one time the aspect of heat, and at another some other form, such as magnetic or electric repulsion: the force might be repulsive in both cases; but why do we call it heat in one case and not in another? Till *the reason* of this difference be discovered we cannot know precisely *what* heat is, even though we be assured that it *is* repulsive force: all we are till then entitled to say is, that it is *a* repulsive force. Now an attempt was made in the *Builder* on the 11th of November, 1854, by Mr. John E. Dove, while considering the question, "What is Electricity?" to point out this *reason*.

> "There are [he remarks] a limited series of recognised or recognizable physical forces operative in the general economy of nature, both interior and exterior to those masses and strata of which our planet, and probably the whole system of planets to which it belongs, consists; and which seem to be more or less engaged in all that general economy, at least on the face of our own little planet. Of the general nature of these forces all we need at present say is that they are regarded as essentially of two kinds only, namely, attractive and repulsive forces, although variously operative, as in what have been called atoms, molecules, particles, masses, strata, and spheres. To one division of the attractive order of these forces we give the name of chemical attraction; to another magnetic attraction; to a third, cohesive force; to a fourth, weight; and to a fifth, gravitation; but all of these are essentially just attractive force. Now it would appear on a little consideration, as if Nature were quite capable of carrying on all her strictly physical operations—all her compositions and decompositions, expansions and contractions, changes and elections,—all the attractions and repulsions, in short, amongst the atoms, molecules, particles, masses, strata, and spheres of which men of science have felt themselves obliged to conclude that she is the aggregate, simply by means of these attractive and repulsive forces, the existence of which they are also obliged to stipulate."

He then goes on to treat of those "mongrel principles to which much of the economy of nature has been ascribed,—namely, 'fluids,' such as 'caloric' once was;" and shows reason to conclude that while the *identities* of such principles as those, for example, of light, heat, and actinism, as in the threefold solar ray, "consist in this,—that they are all three radiative or repulsive forces; their *diversities* will be found to consist in this,—that *they are each connected with a different form or substructure of matter, such as the atom, the molecule*," &c.; and, as regards light in particular, that *it is* the repulsive force *operative in the atoms;* whilst heat *is the repulsive force operative in the molecules composed of these atoms;* and cold merely its antithesis, or the attractive force operative in such molecules. On such a view it is easy to see how and why one form of repulsive force is related to another, and why and how one can evolve the other, while each is a specific and distinct form of repulsive force in itself, though so intimately related to those on either side of it.

We need not here go farther into this subject, and must refer to the paper itself from which we have been quoting; but we may remark, in conclusion, that the issue of such treatises as those of Professor Tyndal and Mr. Colburn seems to indicate that the time has arrived when the importance of such views as those just adverted to will be appreciated.

Vicissitudes of Families. Third Series. By Sir Bernard Burke, LL.D., Ulster King of Arms. Second Edition. London: Longman & Co. 1863.

To the surprise of the author, but not to ours, nor, we are sure, to that of the public, the two

previous series of the "Vicissitudes of Families" have gone through four or five editions; and the third series now appears to be steadily following in the wake of its predecessors. Considering the great and varied interest of these volumes, especially to the class who can well afford to purchase them, it would only have been to be wondered at if an author so competent, both officially and personally, as Sir Bernard Burke, had failed to interest the public on a subject so happily chosen by way of recreation amidst his more strictly professional labours.

The present volume contains many curious, romantic, and not a few very touching stories of the vicissitudes of families. Some, such as the Cole family of Brancepeth Castle, went up like a rocket and came down like the stick; old Cole, by help of his smithy-bellows, blazing suddenly up into a baronetcy in the sixteenth century, and the last one or two of the baronets sinking into denizens of "a mean room of a lowly house in Durham, utterly destitute," and the last of them buried at the cost of others as an act of charity. Other families not only rose and fell, but rose again. One family, the Seaforth, had its fate notoriously predicted, in the time of the second Charles, by an actual "Warlock of the Glen," who was called upon by a countess of the family to tell her, by magical vision, what her husband, Lord Seaforth, was about in Paris, and why he did not come home. The warlock "professed to exercise his power of clairvoyance by means of a circular white stone, with a hole in the middle, which he used to hold up to his eye and *look* through, in order to *see* the passing events of far distant countries." He *saw* Lord Seaforth, as he said, but refused to reveal more than that he was well and merry. Being pressed, however, by her ladyship; he at length, to his own sad condemnation, told her that her lord was "in a gay and gilded room, grandly decked out in velvets, and silks, and cloth of gold; and on his knees before a fair lady, with his arm round her waist, and her hand pressed to his lips." Her ladyship's fury knew no bounds: it involved the poor warlock in its fell maelstrom, and he was doomed to death; but before his murderous execution, he again looked through his magic one-eyed "spectacle," doubtless in search of the evil which might happen to the family, but not probably pretending to "*rule* their planets," as some modern astrological impostors of a low order affect to do. Evil he soon *saw*, and prophesied against the fated family; and, strange to say, that evil has come to pass in the precise forms predicted, even down to the nineteenth century, when a "white-hooded lassie from the East,"—Lady Hood, a widowed, and hence white-capped or hooded daughter of the house, from India,—handed over the estates from the Seaforth family altogether, into the possession of a second husband. Part of this terrible prediction still hangs over the heads of living remnants of the family; and even the killing of her sister by "the white-hooded lassie" (who herself survives), was predicted, and took place, by accident, while driving in a pony carriage

> "In this very remarkable instance of family fate [says Sir Bernard] the prophecy was not found out after the events occurred: *it had been current for generations* in the Highlands, and its tardy fulfilment was marked curiously and anxiously by an entire clan and a whole county. . . . The gradual development of the doom was watched with sympathy and grief; and the fate of Seaforth [the last of them deaf and dumb, as predicted] has been, during the last half-century, regarded as one of the most curious instances of that *second sight*, or, as we should now term it, prophetic clairvoyance, for which the inhabitants of the Highlands of Scotland have so long been celebrated."

There is another terrible story of "magic art" called "A Tale of Magic on Loch Lomond," in which the family of Colquhoun, of Luss, in Dumbartonshire, bordering on the Scottish Highlands, were involved. In connexion with this story we would note the rather curious circumstance that the *science* of magic, in its modern or mesmeric aspect, was reintroduced, in a literary way, to Scotland, by the late Mr. J. C. Colquhoun, high sheriff of Dumbartonshire, who wrote several very curious works on the subject, one under the title of "Isis Revelata," and another on the history of magic.

"Self-Reliance" is an interesting story of two young and high-born ladies, who, in adversity, resolved to become laundresses rather than governesses; apprenticed themselves to their mother's old lady's-maid, whom they happened to meet on the streets of London; and are now fast realizing a new fortune.

But, in truth, every story in the book is full of interest; and we need say no more in recommendation of a work so well fitted for the enjoyment of a leisure hour.

Miscellanea.

New Waterworks for Brecon.—At a recent meeting of the Brecon Local Board of Health, a report having been read, it was agreed that it was necessary to have a sufficient supply of pure and wholesome water for the inhabitants of the town; and that such supply of water be confined, preferably if not absolutely, to the source at Rhydgoch, on or near the spot indicated by the town surveyor. It appears that the estimated cost of the works does not exceed the sum of 4,600*l*.

Iron Streets.—A project has been broached in New York for paving the streets with iron, and conducting the traffic by steam carriages moving on these iron floors. It is urged that the saving to clothing, furniture, and goods, from damage by dust and mud would be enormous; that the resistance on clean iron floors would be small, the wear on carriages slight, and the noise but trifling in comparison with what it is at present. Shoes, it is represented, would wear much longer on iron side-walks than on stone.

Typhus Fever.—In a pamphlet entitled "Application du grand Air dans le Treatment de la Fiévre Typhoide," Dr. Shrimpton, of Paris, publishes several remarkable cures, chiefly attributable to the free admission of fresh air to the patient's bedroom. Dr. Shrimpton, says *Galignani*, considers typhus fever to be a kind of paralysis or asphyxia of all the vital functions, occasioned by the respiration of a lethiferous atmosphere emanating either from a patient in typhus or from some other morbid source; and he particularly demonstrates not only the great advantages to be derived from the effects of open air in the treatment of typhus fever, but maintains the absolute immunity from contagion or infection in the open air.

The Prince's Well.—In commemoration of the visit of the Queen and Prince Consort, in 1861, to the well at the Hill o'Craig o'Doon, Lord Dalhousie called it the Queen's Well. Since the death of Prince Albert the earl has erected here a memorial to the Prince. Over the well, six arches of roughly hewn granite rise about 20 feet high, terminating in a rude cross of white quartz, the whole forming an imitation of the old Scottish crown. Within its base the well now bubbles up in a basin of sandstone, on the margin of which runs this legend,—

> "Rest, travellers, on this lonely green,
> And drink and pray for Scotland's Queen."

Outside of all, smooth green turf is laid, and beyond that is the natural herbage, soon lost among the brown heath and grey stones of the mountain side, on which small white cairns rise. An inscription on the lower stone of the central arch sets forth that "Her Majesty Queen Victoria and his Royal Highness the Prince Consort visited this well and drank of its refreshing waters the 20th September, 1861, the year of Her Majesty's great sorrow." By Her Majesty's wish, the well is now called the Prince's well.

Accidents.—At the Manchester Cathedral a lofty scaffolding has been erected on the side of the demolished tower; and at the top,—a height of about 70 feet,—there is a travelling crane. An iron cap belonging to it, weighing about 8 lb., was accidentally knocked over, and it fell upon the head of a workman who was on a platform about 25 feet below, and killed him instantaneously. Verdict, "Accidental death." The evidence showed that the works, which are under the superintendence of Messrs. Graham, were carefully conducted, and the only attempt at blame was for allowing the cap to be loose; but this was unavoidable, as the crane was in course of erection. The foundation of the new tower was to be commenced this week.——A scaffolding, about 30 feet high, erected in the interior of St. Philip's Church, Salford (which is undergoing re-decoration), gave way on Saturday, and four workmen were severely hurt, two having their legs broken.——During a thunderstorm which passed over Canterbury on the 24th ult., the lightning passed down the wire which connects the telegraph with a dial-plate at the keeper's lodge, arranged to communicate to him the necessary instructions for opening the gates on the approach of the trains. The man describes that he heard a tremendous report; and on looking, he found that two holes were fused in the dial-plate, and a small gaspipe close to it was severed and melting, while the gas was ignited, and burning from the fused end. The telegraphic communication was entirely suspended between Canterbury and all stations up the line for some time.

From Bombay.—The Governor of Bombay laid the foundation-stone of St. Paul's Church, at Poona, on the 29th August. The church is to be a large and elegant structure. The health of the town and island of Bombay had slightly improved. The mortality, however, was still above the average of the last decade of years.

Ascent of Salisbury Spire.—A workman named James Matthews, in the employ of Mr. F. R. Fisher, builder, Salisbury, has made an ascent of the cathedral spire in that city, for the purpose of painting the external ironwork at the summit,—an operation which occupied him nearly two hours, and necessitated his mounting the cross above the vane, which is at the height of more than 400 feet from the ground. The ascent was accomplished by means of twenty or more small iron handles firmly fixed to the spire above the weather-door, which latter is reached by a flight of ladders inside, placed almost perpendicularly one above the other. During the process of painting Matthews secured himself to the spire with a leathern belt.

Liquid Silk.—From Lyons we learn that "a process is talked of by which silk can be liquified and the produce of the worms kept in casks for artificial re-issue in filaments susceptible of a quite novel form of manipulation: it would appear that what is meant bears some affinity to the treatment and uses of gutta percha." Whether this be merely the solution of silk by cupride of ammonium, or ammoniuret of copper, we do not know; but it appears to bear upon a suggestion of ours that *artificial* silk might be made in a fluid form by means of some imitative composition, as of indiarubber and gum lac, which could readily be drawn into fine threads, as we have seen a mixture of gutta percha and pitch drawn out by a paint-brush into hundreds of beautiful filaments. The drying might perhaps be helped by means of steam.

Workmen's Combinations.—A document has just been issued by the committee who directed the recent strike of puddlers in South Staffordshire and East Worcestershire, which evidence the growth of combination among the artisan classes of the kingdom; and the prevailing condition of the iron market, where all the different descriptions of Staffordshire finished iron are now 1*l*. 10s. a ton more than they were before the strike, shows how powerful an effect these combinations have upon the trade of the country. The documents in question show the several weekly amounts that were contributed during the twenty-one weeks over which the strike lasted. The sums range from 15*l*. to 339*l*., exclusive of in some five weeks, subscriptions from flint-glass makers ranging from 5*l*. to 55*l*. Including 143 from the glass-makers, the puddlers received during the twenty-one weeks a grand total of 3,679*l*. At the commencement of the strike 40 men were out, and seven works were standing, and the dividend was 7½d. per head. Afterwards the men increased to 815 and the works standing to 18, whilst the dividend rose to 8s. per head. The have since the strike obtained a rise of 2s. a day wages, and have now got "a permanent union."

Welch's Double-Action Patent Register Stove.—This invention is intended to warm one or two rooms, supplying them with fresh but heated air, by one and the same fire, while also promoting ventilation, and preventing draughts,—purposes long striven for in various ways. The draught from the open fire, instead of flowing upwards and into the chimney, flows downward (towards the feet), and into an iron box behind the fire; and from thence, through sheet-iron pipes, into the chimney. By this means, not only is a better open fire obtained, but a stream of fresh air is passed over the pipes in the air chamber, and led into the room or into the bedroom above; thus obtaining more than double the warmth, it is estimated, of an ordinary fire, but capable of regulation at pleasure. If the ash-pan is drawn a little outwards the downward draught ceases, and the stove then acts like those in ordinary use. As regards ventilation, by supplying room liberally with fresh warm air, the foul air from the combustion of gas, &c., and from exhalations from the lungs, is brought below the breathing level, and swept into the fire. A hollow fender, connected with the warming apparatus, also a part of this invention, which may, at will, be filled with heat from the fire, and this warmth brought to the feet, corresponding with that of hot-water. This hollow feet-warming fender is not necessarily a part of the stove. The first of these stoves brought to London may be seen at work at 259, Holborn.

Hopping for a Window. — Eight or nine ladies of Wrecclesham have been picking hops, the proceeds of their labour to be devoted towards placing a coloured window in the church of that village.

Sanitary State of London.—The health of London has settled down to about the average point. The ten years' average of mortality for the week before last is 1,240; the actual number for the week, 1,233, being seven below the average. Infant mortality is, however, on the increase, the deaths from scarlatina having risen to 148 in the course of the week. The births for the week did not reach more than 1,801, which is 79 below the ten years' average.

The Local Government Act.—A poll has been taken at Cockermouth on the question of adopting the Local Government Act, and the result is, a majority for the Act, of 388, to 292 against it. The same question is creating a stir, or what the Scotch would call "a stour," at Stourport. There, too, there is a strong opposition; but although a meeting of the inhabitants has voted by a small majority against the adoption of the Act, a poll of the ratepayers has been demanded, and it is believed there will be a large majority for the Act.

The Monuments of Italy. — Mr. Victor Delarue has published fifty-two views of the most remarkable monuments of Rome, Venice, Pisa, Florence, and Milan, photographed by Messrs. Bisson, Frères. The views are of large size, and include—St. Peter's; the Colosseum (admirable); Arch of Constantine; Column of Phocas and Arch of Septimus Severus; the whole of the remarkable group at Pisa; a good general View of Milan Cathedral; St. Mark's, Venice; the Ducal Palace, Column of St. Mark, and Quay des Esclavons; the Bridge of Sighs, giving the water wonderfully; and a View of St. Maria della Salute, the Piazetta, and the Grand Canal of Venice.

Scarlet Fever on the South Coast.—During the past week or two something of a panic has been caused among the residents at Eastbourne, by the prevalence of scarlet fever in that town. Several deaths have already taken place from this epidemic, and amongst those who have fallen victims to it are two sons of Mr. R. Hanbury, M.P. for Middlesex, whose family reside here. Mrs. Hanbury also died on Sunday last, although not from the prevailing malady. Eastbourne has hitherto shown a lower rate of mortality than almost any other place in England. At Brighton, as we understand, scarlet fever is also showing itself. In one large school eleven cases have occurred. An immediate examination by competent and disinterested persons should be made at both places, to detect, if possible, the local cause.

Monumental.—A marble statue of the Queen at Hull, which has recently been presented to the town by the mayor, Mr. Ross, will, it is expected, be uncovered by Earl de Grey on the 14th inst., when the foundation stone of a new bridge to cross the Hull is also to be laid.——There is a movement at Glasgow for the erection of a monument to Lord Clyde in his native city.——In the parish church of Bishopwearmouth, Sunderland, a monument is being erected to the late unfortunate *Times* Correspondent in China, Mr. Thomas William Bowlby. Mr. J. Pennethorne is the architect, and Mr. Wren, of Pimlico, is executing it. The design is Gothic, and on a black marble tablet is an inscription written by Mr. Tom Taylor, a fellow townsman.——At Barnstaple, an additional wing to the North Devon Infirmary has been erected at a cost of about 700*l.* out of the funds wherewith to raise a memorial to the late Lord Fortescue, lord-lieutenant of Devon. A statue of the earl had already been placed in the Castle-yard at Exeter. The Infirmary wing has just been opened.——Mr. H. J. Foley, R.A., has been selected by a committee of noblemen and gentlemen to execute the marble statue of Stonewall Jackson, of heroic size, to be presented to Virginia on behalf of the people of England.——The statues of Allen Ramsay and Professor John Wilson, which are to be erected respectively in the West and East Princes-street Gardens, Edinburgh, are expected to be ready shortly for inauguration.——A deputation from the committee of subscribers (17,000 in number) to the Dundee Baxter testimonial have presented an address to the sculptor of the marble statue of Sir David Baxter (Mr. Steell, of Edinburgh), expressive of their admiration of the way in which he has executed his commission; and at the same time the deputation presented a silver tea and coffee service to Mrs. Steell, for which and for the address Mr. Steell thanked the deputation in appropriate terms.

South Kensington Museum.—The visitors during the week ending 3rd October numbered 13,304.

Prince Napoleon.—Last week, Prince Napoleon and suite visited Mr. George Jennings's depôt of sanitary inventions, and stopped three-quarters of an hour. They examined everything; and, before leaving, the Prince, in very good English, expressed himself as much pleased with all he had seen. Soon after, the Count de Fleury, and several other French gentlemen, went over the establishment.

Proposed New Esplanade at Brighton.—The local directors and guardians have almost unanimously passed a resolution "That an application be made to the town council for permission to employ the pauper labour upon the bank under the Marine-parade wall, so as to form a road or wall, subject to the approval of the council." A walk or esplanade in the position indicated would be sheltered from the north-east winds. The matter was referred to the new workhouse committee.

Shrewsbury Sewerage. — The following tenders were opened on Thursday last for the construction of the main outlet sewer; Mr. Curley, engineer:—

Moore	£10,834	0	0
Charles	10,970	0	0
Field	12,866	0	0
Moxon	18,864	0	0
Dickson & Co.	19,750	0	0
Thomas	30,890	0	0

The *Hereford Times* says,—"Considering that the quantities were supplied, the *Builder* would, no doubt, call some of these 'blind tenders.'" And our contemporary will surely not disagree with us if we do. The list is very discreditable.

The Late Mr. William Buckle, C.E.—The builder of the first locomotive engine which made the journey from Liverpool to Manchester, so unfortunately remembered less for the triumph of engineering art than for the dreadful death of Mr. Huskisson, ought not to pass away from the world without a line of friendly notice. William Buckle, whose death is just announced, was the contemporary and friend of Watt and Stephenson, and his name is associated with many scientific improvements. He was born at Alnwick Castle, in 1794, and was educated at the Hull Grammar School. Mr. Buckle superintended the arrangements of the visit of George IV. to Ireland. After this he became connected with the Soho works of Messrs. Boulton & Watt, at Birmingham, where he held a responsible post till 1851, in which year he was appointed by Sir J. Herschel to an important office in the coining department of the Royal Mint. Mr. Buckle was a vice-president of the Institute of Mechanical Engineers.

Steam Boiler Gas Furnaces.—The patentee of this proposed substitute for coal, respecting the practicability of which there has recently been much discussion, is Mr. A. Jackson, of the East-India Chambers. A boiler to which the gas fuel is applied in Messrs. Cutler's works, in Wenlock-road, City-road, is about 3½ feet in diameter, and it is perforated by a great number of perpendicular tubes, through which the heat of the gas flame passes, so as to present a large heating surface. The quantity of gas consumed per hour is stated not to exceed 200 cubic feet, which will guarantee 2 lb. weight of steam per minute. The engine supplied with steam from the boiler is equal to four-horse power. The steam indicator showed that the pressure was not steadily maintained above 30 lb. to the inch. As there is no smoke from such a furnace, no chimney is required, the vaporous products of combustion being carried off by a small tube. It is stated by Mr. Jackson that in his application of gas its cost is three times greater than that of coal for generating an equal quantity of steam, but he asserts that the extra cost of fuel is more than compensated by the saving of labour. With illuminating gas at the present prices, the invention seems to be only applicable to special circumstances.

TENDERS.

For villa residence, Surbiton, Surrey, for Mr. L. Wilson. Mr. Henry M. Molyneux, architect:—

Manby & Rogers	£1,527	0	0
Higgs & Co.	1,250	0	0
Hart	1,245	0	0
Nicholson	1,200	0	0
Adamson	1,197	0	0
Sharpington & Cole	1,159	0	0

For Wesleyan Chapel, Epsom. Mr. E. Bassett Keeling, architect. Quantities not supplied:—

Hooker (accepted)	£852	0	0

No. 9 Porthland Gardens, Notting Hill, London, W.

AGENTS WANTED.—The CALEDONIAN INSURANCE COMPANY (Established 1805 by Royal Charter and special Act of Parliament) is prepared to APPOINT Additional AGENTS for either the Fire or Life Departments. Commission Liberal.—Applications to be addressed to JAMES MUIR, Esq., Resident Secretary, Caledonian Insurance Office, 64, Lothbury, E.C.

TO ARENTS AND GUARDIANS
AN ARCHITECT and SURVEYOR has a VACANCY in his Office for an ARTICLED PUPIL. Premium would be a secondary consideration with a well-educated youth, having a knowledge of drawing, and a taste for the profession.—For particulars, apply by letter only, to Y. Z. care of Mr. Nye, News Agent, 78, Theobald's-road, W.C.

BOROUGH of PORTSMOUTH.—The Local Government Act, 1858. The Council of the said Borough, as constituting the Local Board under the above mentioned Act, are prepared to receive APPLICATIONS from properly qualified persons to fill the office of SURVEYOR to the Board, the salary to which has been fixed at £600 the necessary Assistants and Offices being provided by the Council. A thorough practical knowledge of drainage and road-making in all its branches, road-making, and laying out of streets, surveying and regulation of buildings and the various other details involved in an efficient carrying out of the Act is indispensable, and a preference will be given to candidates who have been engaged in and successfully executed such works. Applications, addressed to the Local Government Act Committee of the Town Council, accompanied by testimonials and references, to be sent to the Town Clerk's Office on or before the 14th OCTOBER next. Candidates will be required to attend, unless previously communicated with.—By order, JOHN HOWARD, Clerk.
Guildhall Chambers, Portsmouth, September 24th, 1863.

WANTED, a DRAWING CLERK, thoroughly competent to get out fair working drawings, plans, sections, and perspectives, and having a general knowledge of the duties of an Architect's Office.—Address, by letter, to R. J. B. Office of "The Builder," stating terms, references, &c.

TO STAIRCASE MAKERS
WANTED, immediately, a Practical Working Man, to put up a spiral staircase. He must be competent to make the working drawings and carry up the staircase. Good reference required.—Apply to Mr. W. PAGE, Builder, Eltisley, Suffolk.

TO PAINTERS

VENTILATION—PURE AIR.

for the admission of Pure Air

THROUGH THE EXTERNAL WALL.

These Ventilators are arranged so that the requisite quantity of air may be admitted in the ventilation of any apartment without the slightest draught being felt by the occupants: and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 187 and 189 (late 117 and 118), Union-street, Borough, London.

POLONCEAU and SEYSSEL ASPHALTE.

ESTABLISHED 1838

For covering Flat Roofs, Paving and Flooring of every description, especially in places subject to damp and vermin. This Asphalte is now extensively used for paving the slopes of vaults, the shores of docks, and other purposes where a perfectly impervious surface is required. For Estimates and Prices, &c. &c. apply to JOHN PILKINGTON, 15, Fish street-hill, London, E.C.

Country Builders supplied with Asphalte in Bulk for covering Footings, Barn Floors, &c. with instructions to lay it down.

CROGGON and COMPANY, Manufacturers of PATENT ASPHALTE ROOFING, BOILER, RAILWAY, SHEATHING, and INDORORUS FELT, For Damp Walls, and Lining from Houses. DOWGATE HILL, London; and 2, GOREE PIAZZA, Liverpool.

DURABILITY of GUTTA PERCHA TUBING. Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following extract from Mr. RAYMOND JARVIS, Hall Yeatman, Esq. of Wright, Sons, and Fenton's letter, dated "March 13th, 1862—In reply to your letter requesting this information, respecting the Gutta Percha Tubing for Pump Service, I can state with much satisfaction, it answers perfectly. Many builders and other persons have very extensively put it, and there is not the most apparent difference on the first laying it on, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF ROAD, CITY-ROAD, LONDON

INDIA-RUBBER MILL BANDS, WASHERS for Steam Joints, HOSE PIPES and FLEXIBLE TUBING. A STOCK OF THE ABOVE ALWAYS ON HAND. JAMES LYNE HANCOCK, VULCANIZED INDIA-RUBBER WORKS, GOSWELL-MEWS, GOSWELL-ROAD (opposite Seymour-street), LONDON, E.C.

Also as to the Tuning, &c. of Organs in all parts of the country. Church Organs of any size built, enlarged, or recovered, as well as removed and WAREHOUSED DURING RESTORATIONS. PRIZE MEDAL, 1851.

CONTRACTORS FOR ROOFING THE GREAT EXHIBITION BUILDING OF 1862.

By Her Majesty's Royal Letters Patent.

F. McNEILL & CO. of LAMB'S BUILDINGS, BUNHILL ROW, LONDON,
Manufacturers and ONLY Patentees of
THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.
Patronized by
HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSIONERS OF CUSTOMS,
HONOURABLE EAST INDIA COMPANY,
HER MAJESTY'S WAR DEPARTMENT,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK.

Added to the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland, at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House at Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its use, and the manner of applying it, with TESTIMONIALS, some of the most eminent engineers, from Architects, Builders, Noblemen, and Gentlemen, who have extensively used it, sent free to any part of the United Kingdom on receipt of a Post-office Order for 1s. 6d. It also manufactured, by which a saving of about 25 per cent in fuel is effected. The TRADE are respectfully requested to send their orders DIRECT to the FACTORY, as the surest means of being supplied with a good article, at the lowest rate consistent with the same. The original works where the above roofing is made are F. McNEILL & CO.'S Manufactory, LAMB'S BUILDINGS, BUNHILL ROW. Roofs covered with McNEILL'S FELT to be seen at the CAMPS of ALDERSHOTT, CURRAGH, SHORNCLIFFE, and COLCHESTER, upwards of Three Millions of Feet; also the GREAT EXHIBITION BUILDING of 1862, of nearly One Million Feet. A Liberal Discount allowed to the Trade.

THE FLUO-SILICIC STONE-PRESERVING COMPANY, LIMITED.

39, CHARING CROSS, S.W. & 12, COPTHALL COURT, THROGMORTON STREET, E.C.

PATENT FLUO-SILICIC INDURATIONS for the PRESERVATION of STONE, CEMENT, and other like materials. The Company apply to the surface of Stone, Cement, &c. a solution of Fluo-Silicic Acid, and Silicate of Potash. These are the only patents which embrace the use of that most valuable agent, Fluo-Silicic Acid. Bath, Caen, and other soft stones, when treated by the Company's solution, become extremely hard. The great expense of high ornament to be lines in hard stone has been an obstruction to Art; but since the Fluo-Silicic process can be applied so readily to soft stone after it is carved, that obstruction exists no longer. The Fluo-Silicic at once permanently arrests the decay of all stone.—For further information apply to the Manager of the Company, Mr. DUDLEY, Architect, as above.

BARTLETT, BROTHERS, & CO.

DEVONSHIRE WHARF, CAMDEN TOWN, N.W.

PATENT INDURATING SOLUTIONS,

For the Preservation of Stone, Cement, &c.;

PATENT SILICEOUS PAINT, FOR COATING BRICKS, CEMENT, &c.

OCTAVIUS N. SIMPSON, STAMFORD;
and see Specimens at the Offices of
Messrs. PINDER SIMPSON & SONS, 33, Savile-row, London, and at the Museum of Practical Geology, Jermyn-street, W.
This stone (which is a perfect oolite), is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.

SLATES.—JONES & CO. have a STOCK of SLATES of different sorts, from the best quarries in Wales. SLABS and CISTERNS delivered at any station in quantities of not less than five tons, from their depôts, Bangor, Garston, Saltney, Chester, and Gimscar.

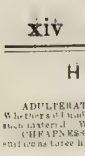
A. W. FABER'S POLYGRADE LEAD PENCILS, sold by all Stationers and Artists' Colourmen.

Sole Agents HEINTZMANN & ROCHUSSEN, 9, Friday-street, E.C.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.



ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Baryta from ten to thirty per cent. Whether called "the name of the Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per lb. in weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,

WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 91, LIME STREET, LONDON

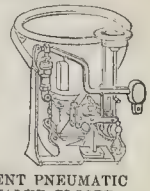
J. TYLOR & SONS' PATENT

REGULATOR WATER-CLOSETS.

Valve.

Pan



The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, a perfect flushing is insured. Any number can be worked by one supply pipe. No pattern-valves, cranks, or wires required. The Closets can be seen in action at the Manufactory, and Illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick Lane, Newgate-street, London.

GUEST & CHRIMES, FOUNDRY and

GENERAL BRASS WORKS, Rotherham; and 37, Southampton street, Strand, London, W.C.

London House, Mr. THOMAS BEGGS.

ESKHOLME'S PATENT PNEUMATIC REGULATOR and VALVE CLOSET.

Suitable for first and second class houses, being most efficient and simple, free from all smell, and requires no cisterns, service boxes, cranks, wires, or levers, but is complete in itself ready for attachment to any ordinary house service pipes. It is supplied in three qualities, all equally efficient, differing only as to the style of fitting up. A second class quality is also manufactured. The Regulators are usefully applied to the ordinary Pan Closet, also dispensing with all cisterns, service boxes, cranks, wires, &c. The Regulator is supplied separately, as well as connected to ordinary direct Service Valve Water Closets.

Chrimes's Patent High Pressure Single and Double Loose Valve and Screw Down Cocks; Improved Self-Acting and Full Waterway; Patent Absolute Waste Preventer; Plumbers' and Gas Fitters' Brass Work of every description. Drawings, Descriptions, Prices, and Testimonials will be forwarded per post on application as above.

Duff & Co., the old-established Carriage and Harness Manufacturers, of Long-lane and Bermondsey-street, the premises being required for immediate occupation by the Metropolitan Railway Company, for their extension to Finsbury.

HOLLOWAY.—Important Sale of Pianos, Decorative Furniture, and Oil Paintings.

MR. THOMAS KING is instructed by Messrs. Cox & Cutler, who are dissolving Partnership, to SELL by AUCTION, on the PREMISES, No. 4, Lyndale-terrace, Holloway-road, on SUNDAY, OCTOBER 25th, and following day, without the least reserve, the valuable and quite modern STOCK in TRADE, comprising pedestal and other Pianos of every description, sheet lead, cloud pipes, chests, &c.; Mantelpieces in imperial, Sienna, and other marbles, of plain, and a quantity of ornamental glass, varnishes, diamonds, brushes, oil bottles, gas fittings, numbering 150 chandeliers; buckets and pedestals, iron barrel, japanned and other tongs, shop fixtures, earthenware, black and oil stoves, mantle, counting-house, and kitchen fenders, Eastern-range, register, and other stoves, and a large number of useful articles.—To view MONDAY, OCTOBER 19th, the Stock may be had on the Premises, and of Mr. THOMAS KING, Auctioneer and Surveyor, No. 7, Railway-place, Holloway-road, N.

CROYDON, SURREY.—Valuable Building Plots.

MESSRS. BLAKE will SELL by AUCTION, at the New Inn, Croydon, on SATURDAY, OCTOBER 24th, at TWO for THREE o'clock, Thirty highly Valuable FREEHOLD BUILDING PLOTS, having important frontages in the High-street (at South End), Lower Coombe street, South-bridge-road, Reed's road, and a new road connecting the High-street with South-bridge-road. The land offers to capitalists and builders first-rate sites for the erection of shops and private houses, being immediately contiguous to the town, and within easy distance of the railway-station. The intended railway terminus at South End, when completed, will materially enhance the value of the Land.—Particulars, with plans, may be had at the New Inn, Croydon; at Garraway's Coffee-house, Change-alley; of Messrs. CURREY & HOLLAND, No. 9, Old Burlington-street, London; and of Messrs. BLAKE, Croydon.

TEDDINGTON, MIDDLESEX Valuable FREEHOLD BUILDING LAND, in the finest and healthy situate, adjoining the pictures sque village of Teddington, near Bushy Park, the River Thames, Hampton Court, and other attractive features of this favourite locality.

MESSRS. DRIVER & CO. will SELL by AUCTION, at the CLARENCE ARMS INN, Teddington, on FRIDAY, OCTOBER 16, in 20 lots, about 15 acres of exceedingly valuable BUILDING LAND, delightfully situate on a gravelly soil, close to an entrance to Bushy Park, abutting on two high roads, within a few minutes' walk of the Teddington Station on the Kingston bridge line of railway, and close to a proposed station on the Thames Valley line, thus presenting numerous inducements for the erection of villa residences, for which the size and position of the lots are well suited. Printed particulars and plans may be had at the chief Inns at Richmond, Twickenham, Teddington, Hampton, Kingston, and Hampton-wick; at the Mart; and of Messrs. PARKINSON & LONGMAN, Solicitors, Winchester-buildings, City; at the Place of Sale; and of Messrs. DRIVER & CO. Surveyors, Land Agents, and Auctioneers, 4, Whitehall, London, S.W.

TEDDINGTON and HAMPTON WICK, MIDDLESEX Valuable FREEHOLD BUILDING LAND, beautifully situate in the Valley of the Thames, close to the new Railway station at Hampton-wick, near to Kingston, Hampton Court, Bushy Park and Teddington, and within 40 minutes' ride of London, laid out and arranged in lots admirable for the erection of villa and other suburban residences, many of the lots having frontages upon the high turnpike road, all commanding extensive and pleasing views, and being of good and convenient size.

MESSRS. DRIVER & CO. will SELL by AUCTION, at the CLARENCE ARMS INN, Teddington, on FRIDAY, OCTOBER 23, in 47 lots, about SEVENTY ACRES of exceedingly valuable BUILDING LAND, freehold, rent-free, and land-tax redeemed, situate in the high pasture, ride and favourite residential district lying between Teddington, Bushy Park, and Kingston and now being in certain respects only a mile out of the metropolis. The estate will have frontages from 20 to 80 feet, and with depths of from 200 to 250 feet, so as to form suitable sites for the erection of large or small detached mansions.—Printed particulars and plans may be had at the chief Inns at Richmond, Twickenham, Teddington, Hampton, Hampton Court, Kingston, and Hampton-wick; at the Place of Sale; of Messrs. TERRELL & CHAMBERLAIN, Solicitors, 30, Basinghall-street, London; and of Messrs. DRIVER, & CO. Surveyors, Land Agents, and Auctioneers, No. 4, Whitehall, London, S.W.

Catalogues may be had of the Auctioneers, 9 and 10, Basinghall-street, E.C.

LONDON, CHATHAM, and DOVER RAILWAY, BERMONDSEY.—Of a piece of FREEHOLD BUILDING, WHITELEAD, GLASS, BRUNSWICK GREEN, and EFFECTS.

MR. KEMP will SELL by AUCTION, at the FACTORY, 165, Bermondsey-street (in the rear of the Fox and Goose Tavern), on TUESDAY next, at ONE o'clock, without reserve, the STOCK of a PAPER-STAINER: comprising 3,000 pieces, in every design in marbles, satins, flocks, gold, &c. 40 lbs of whitelead, glass, Brunswick green, and effects.—View morning of Sale, and catalogues.—Auctioneer's Offices, 27, Coleman-street, Bank.

LOWER-ROAD, ISLINGTON.—Useful Building Materials.

MESSRS. CRAWTER are favoured by instructions from the Governor and Directors of the New River Company, to SELL by AUCTION, with all reserve, upon the PREMISES, on WEDNESDAY, OCTOBER 21, 1863, at ONE o'clock precisely, the MATERIALS, comprising a quantity of brickwork, masonry, plain and ironing, slating, tiling, carpentry, joinery, chimney pieces, cisterns, stoves, sash bars, &c. of seven houses and premises, being Nos. 4, 5, 6, and 7, in the Lower-road, and Nos. 16, and a double cottage and premises part of Bull's-buildings, in the rear. May be viewed the day prior to the Sale, and Catalogues had at the Premises, No. 44; the Angel Inn, Islington; and of Messrs. CRAWTER, Surveyors, &c. 5, Bedford-row, Gray's-inn, W.C.

TIMBER DEALER'S AND BUILDER'S STOCK.—Camden Town

MESSRS. LEREW & LEREW will SELL by AUCTION, at CAMDEN TERRACE, on MONDAY, OCTOBER 19th, at TWELVE for TWELVE, a large quantity of PLANKS, DEALS, and BATTENS, Dry Cut Stuff, 2½ feet Spanish and Honduras Mahogany, 1½ feet Birch, 7,000 feet wide Pine, 4,000 feet Pine Square, Prepared Flooring, Scantling, Slating Battens, Panel Laths, useful Materials, &c.

BUILDING LAND TO BE LET, on lease, situate in the best part of Norwood, within ten minutes' walk of the Crystal Palace, and immediately adjoining the Gipsy Hill Station. This eligible building ground is suitable for detached or semi-detached villas, which are in great demand. Money can be advanced to builders if required, at moderate rates of interest.—For particulars, apply, personally, to Mr. WILLIAM BACKHOUSE, Architect, 32, Southampton-buildings, Chancery-lane, W.C.

FREEHOLD GROUND RENTS, CITY of LONDON.—The Commissioners of Sewers of the City of London will meet in the Guildhall of the said City, on TUESDAY, the 13th of OCTOBER next, at HALF-PAST TWELVE o'clock precisely, to receive PROPOSALS for the PURCHASE of FREEHOLD GROUND RENTS, on premises let on building leases, having about eighty-one years to run, and several reversions from 50 to 74, Watling-street, Nos. 76 and 77 Newgate-street, and No. 4, Maidenhead-court, Aldersgate-street; particulars and plans of which may be had at this Office, together with the conditions of sale. Tenders must be sealed, endorsed outside, "Tender for Ground Rents," and addressed to the undersigned at this Office, and must be delivered in before TWELVE o'clock, on the said 13th of OCTOBER next. The Commissioners do not bind themselves to accept any Tender, unless the same be deemed eligible. Parties tendering must attend personally, or by an authorized agent, on the day of treaty, and be then prepared (if their Tender be accepted), to pay the required deposit of 10 per cent and to execute an agreement for the completion of the purchase, according to the conditions of sale. JOSEPH DAW, Principal Clerk.

Sewers Office, Guildhall, September 22, 1863

TO BRICKMAKERS and OTHERS.—TO BE SOLD, or LET on lease for a term of years, a BRICK-FIELD, in the immediate neighbourhood of an important town in Kent. The Land is freehold. The demand for bricks is large, and daily increasing, and an unlimited grant of the bricks exclusive quality of the soil is offered. The situation is within a mile of two railway stations.—For further particulars and terms, address, Z. Z. Z. Office of "The Builder."

FARNBOROUGH and ALDERSHOTT FREEHOLD and GROUND-RENT SOCIETY (Limited).—To BUILDERS and Others.—Land on this Society's Estate at Farnborough, 1½ mile from the Station, to be SOLD or LET on advantageous terms.—Particulars may be had of the Architect, Mr. H. CURREY, 3, Lancaster-place, Strand, W.C.; or at the Offices of the Society, 18, New Bailey-street, Blackfriars.

EDWARD CHATFIELD, Managing Director.

GROUND in BASINGHALL-STREET, now occupied by Houses and Warehouses, known as Nos. 20 and 21, Basinghall-street, TO BE LET by TENDER, for Building purposes. A plan of the ground and form of Tender may be obtained at the Offices of EDWARD PANSON, Esq. No. 7a, Lawrence Pountney-hill, Cannon-street; or of Messrs. HOLLINGSWORTH, YEOMAN, & GREEN, No. 24, Gresham-street, London; where Tenders, under seal, are to be delivered on or before the 1st DECEMBER next. The Owner does not bind himself to accept the highest or any Tender.

BUILDING LAND, EALING.—TO BE LET, in PLOTS, direct from the Freeholder, for Villas. This estate is within 200 yards of a Station, at which more than 50 trains stop daily, and abutting on the high road. Its intrinsic value is, that on completion of the Finsbury Extension of the Metropolitan Railway, this side will be actually within half an hour of the Bank of England. The subsoil is gravel, and the roads and sewers are made. Particulars of Messrs. GRAY & BERRY, 108, Edgware-road; or Mr. JONES, Architect, Ealing, W.

CITY of LONDON.—FREEHOLD BUILDING LAND.—The site of two houses at the corner of College-hill and Cloak-lane (land-tax redeemed), TO BE LET by the Worshipful Company of Cutlers, on a BUILDING LEASE for eighty years. Tenders to be sent to the Clerk's Hall, on or before MONDAY, the 9th of NOVEMBER, 1863. For further particulars apply to Messrs. BEAUMONT & THOMPSON, Solicitors, 19, Lincoln's-inn Fields, or Messrs. TRESS & CHAMBERS, Architects, 27, Queen-street, Cheapside

BUILDING GROUND, Milk Street, Cheapside.—Notice is hereby given, that the Committee for Letting the City's Lands will meet at Guildhall, on WEDNESDAY, the 21st of OCTOBER next, at ONE o'clock precisely, to receive PROPOSALS for a BUILDING LEASE for 80 years of a piece of ground on the east side of Milk street, Cheapside, in the City of London. A plan of the ground may be seen, and forms of Tender obtained, at the Office of the City Architect, Guildhall.

FERDINAND BRAND, Comptroller.

Guildhall, 24th September, 1863.

TO BUILDERS.—MUSWELL HILL, near to the Church and Alexandra-park.—Some eligible sites LAND in the Lessee's district, suitable for the erection of three pairs of Villas. TO BE LET on BUILDING LEASE. Apply the Landlord, and to water bailiff on Liberal advances will be made.—Apply to M. HEATHEY, Land Surveyor, 40, Fetter-lane, E.C.

SUTTON, near the Station.—PLOTS of FREEHOLD BUILDING LAND FOR SALE. Land taxe redeemed, conveyance free. Also, PLOTS TO BE LET, on a Building Lease, for ninety-nine years.—For plans, &c. apply by post, prepaid, to Mr. THIRS, Builder, Sutton, Surrey, S.

KEYNSHAM BLUE LIAS LIME and CEMENT WORKS, SOMERSET.—TO BE SOLD by PRIVATE CONTRACT, by order of the Liquidator, the newly-formed FREEHOLD WORKS, comprising 4 acres of LAND, and premises, with the existing kilns and ovens are capable of producing 700 to 800 tons of lime and 15 tons of cement weekly, both premises being supplied by large contracts and ordered at a steady, increasing rate, the Lime being of the Government fortifications now in progress. The substance is very substantial and the machinery is of the best description, and recently erected, and will be sold with the stock in trade, or separately. Coals are supplied to the works at a very low price, and the Great Western Railway Station is within a short distance.—For further particulars apply to Messrs. N. LINDS & SONS, Solicitors, 47, Moorgate-street; of F. MAYNARD, Esq. Liquidator, 19, Bread-street, Cheapside; and of Messrs. FULLER & HORSEY, 13, Billiter-street, London.

TO CONTRACTORS, BUILDERS, and BRICKMAKERS Near to Morden, Old Malden and Wimbledon Park, and Sutton Railway stations. TO BE LET, about EIGHTY ACRES of valuable BRICK-EARTH LAND, which may be worked without much labour and at a moderate royalty. Specimens of various strata may be inspected, and further information obtained at the Offices of Messrs WIGG, SON, & OLIVER, No. 7, Bedford-row, W.C.

BATTERSEA. — Between Clapham and Battersea Park.—To BUILDERS and OTHERS.—LONG HEDGE FARM ESTATE TO BE LET on BUILDING LEASES direct from the Freeholders, at most rate greater rents. The property lies most favourably for Central Access, Battersea Bridge, and immediately adjoining the Works of the London, Brighton, and South Coast Railway Company, and the Wandsworth road and Station, whereby Omnibuses pass and repass every few minutes. Roads and Sewers now forming. The Low Level Sewer in course of construction will effectually drain the whole of the said estate.—For plans and further particulars, application may be made to Messrs. COLLYER BRISTOW, & WITHERS, Solicitors, 4, Bedford-row, W.C.; to Mr. CHARLES LEE, 20, Goldensquare; or to Mr. R. J. WITHERS, 31, Doughty-street, W.C.

REPAIRING LEASES.—To TRUSTEES, SURVEYORS, and OTHERS.—The Advertiser is desirous of taking on lease, at a rental, an Estate of weekly or other houses requiring an outlay for repairs. Ample references.—Address, A Z care of Housekeeper, 6, Southampton-buildings, Holborn.

LEE, KENT.—LAND TO BE LET, by the Merchant Taylors' Company, on Building Leases of 88 years from Michaelmas next.—Plots to be addressed, before the 31st OCTOBER next, to SAMUEL FISHER, Esq. Solicitor, Merchant Taylors' Hall, Threadneedle-street, London, of whom particulars, with a plan, may be obtained. The Company do not bind themselves to accept the highest or any Tender.

London:—Printed by CHARLES WYMAN, Printer, at the Printing-office of Cox & Wyman, Nos. 74 and 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-fields; and published by the said CHARLES WYMAN, at the Office of "The Builder," No. 1, York-street, in the Parish of St. Paul, Covent-garden, both in the County of Middlesex.—Saturday, October 10, 1863.

The Tenders must be properly filled up and signed, and delivered at this Office (under closed envelope, marked on the outside "Tender for Supply of Straw"), and no Tender will be noticed unless made on forms obtained from this Office, and delivered by the hour appointed.

Commissariat Office, Aldershott, 9th October, 1863.

ARMY CONTRACTS.—TENDERS will be received at this Office until TWELVE o'clock, Noon, on TUESDAY, the 3rd NOVEMBER, 1863 from persons who may be willing to enter into CONTRACT to SUPPLY FLOUR for HOSPITAL BREAD, in such quantities as may be required, from the 1st DECEMBER, 1863, to the 31st MAY, 1864, for the use of Her Majesty's Forces stationed at Aldershott Camp, and within the command.

Forms of Tender and Conditions of Contract may be obtained on application at this Office, by letter or in person, between the hours of TEN and FOUR o'clock.

The Tenders must be properly filled up and signed, and delivered at this Office (under closed envelope, marked on the outside "Tender for Army Supplies"), and no Tender will be noticed unless made on forms obtained from this Office, and delivered by the hour appointed.

Commissariat Office, Aldershott, 9th October, 1863.

LANCASHIRE and YORKSHIRE RAILWAY.—The Directors are prepared to RECEIVE TENDERS for the IRON GIRDERS of the BRIDGES over the Irwell-son from Salford to Victoria Station, Manchester. Drawings may be seen, and forms of Tender obtained, at the Engineer's Office, Hunt's Bank, Manchester, on and after the 5th OCTOBER instant, and Tenders, properly endorsed and addressed to the Directors, must be in the hands of the undersigned not later than MONDAY, the 26th OCTOBER instant.—The Directors do not undertake to accept the lowest Tender.

WM S. LAWN, Secretary.

Manchester, 1st October, 1863.

WEST HAM LOCAL BOARD of HEALTH.—Notice is hereby given, that the Board of Health for the District of West Ham, in the county of Essex, are prepared to receive TENDERS for the ERECTION of TWO COTTAGES, on their land at Canning Town, adjoining the Sewerage Outfall Works. Conditions of Contract, forms of Tender, and any other information may be obtained at the office of the Local Surveyor, at Rokeby House, in Stratford, E. between the hours of TEN and TWELVE o'clock. Tenders are to be delivered at my Office, at Rokeby House, in Stratford, not later than MONDAY, the 26th instant; and each of them must contain a Ten Pound Bank of England Note, endorsed by the party tendering, to be returned in the event either of the Tenders not being accepted, or on the completion of the contract or bond.—By order of the Board.

CHARLES WILSON, Clerk.

Rokeby House, Stratford, E. October 10th, 1863.

BOROUGH of NEWCASTLE-UPON-TYNE.—HOSPITAL of ST. MARY THE VIRGIN.—ERECTION of the ROYAL FREE GRAMMAR SCHOOL.—To BUILDERS and OTHERS.—The Corporation of Newcastle-upon-Tyne invite TENDERS from Builders and others for the ERECTION of the ROYAL FREE GRAMMAR SCHOOL, and other Works connected therewith, at the Hill, in Newcastle-upon-Tyne, according to plans, working drawings, and specifications approved of by the Town Council, and sanctioned by the High Court of Chancery. The plans and specifications may be inspected on application to the Architects, Messrs. JOHNSON, HOGG, & SONS, 32, Pilgrim-street, where further information can be obtained; and sealed Tenders, addressed to "The Chairman of the Committee on Schools, Charities, and Hospitals," will be received at the Town Clerk's Office, Guildhall, up to SIX o'clock on TUESDAY, the 27th day of OCTOBER next. The Corporation do not bind themselves to accept the lowest or any Tender.—By order,

JOHN CLAYTON, Town Clerk.

Guildhall, Newcastle, 30th September, 1863.

TO BUILDERS.—Persons desirous of giving in TENDERS for the ERECTION of a CHURCH, at Clearwell, near Coleford, in the county of Gloucester, for the Right Honourable Caroline, Dowager Countess of Dunraven, may see the plans and specifications at the Reading-room, Clearwell, from OCTOBER 19th to OCTOBER 31st instant. JOHN MIDDLETON, Architect.

Cheltenham, October 1st, 1863.

TO WORKING BRICKLAYERS.—TENDERS WANTED, for the Workmanship only, of about Seven Rods of BRICK WORK, contained in the proposed New Baths, Washhouses, School, Chapel, Club Rooms, Cooking Depôt, and Work and Men's Lodging Houses, about to be erected in Hartshorn-court, Golden-lane, Barbican.—Further particulars can be seen at the Office of Mr. WM. BURNS, C.E. No. 100, Golden-lane, Barbican, E.C.—Tenders to be sent to the above address, on or before TUESDAY, the 27th OCTOBER, 1863.

London, 15th October, 1863.

CONTRACTS.

CITY of MANCHESTER.—To ARCHITECTS and LANDSCAPE GARDENERS.—MANCHESTER CEMETERY.—EXTENSION of TIME.—NOTICE. Persons desirous of obtaining PLANS and other particulars to enable them to compete for the design for laying out this Cemetery, can obtain them by applying at the City Surveyor's Office, Town Hall, Manchester, on or after the 8th of OCTOBER instant. The date of furnishing particulars having been postponed, a proportionate extension has been made in the time allowed for sending in designs.—For particulars as to premiums offered, &c. see former advertisements.—By order,

JOSEPH HERON, Town Clerk.

Town Hall, Manchester, 5th October, 1863.

TENDERS.—Notice is hereby given, that the Hastings Local Board of Health are ready to receive TENDERS from persons desirous of CONTRACTING with them for the SUPPLY of about 5,500 YARDS of 9 inch CAST IRON WATER-PIPES, BENDS, JUNCTIONS, &c. The specification and particulars may be had on application at the Town Clerk's Office, High street, Hastings, where Tenders, duly signed, must be delivered before TEN o'clock of the morning of FRIDAY, the 23rd day of OCTOBER next. The local Board do not bind themselves to accept the lowest or any Tender. ROBERT GROWSE, Town Clerk.

Hastings, September 28, 1863

TO WELL-SINKERS and BORERS.—TENDERS WANTED for SINKING a WELL in the Two Brewers-court, Golden-lane.—Intending contractors can see the plans and specifications at the Office of Mr. WILLIAM BURNS, C.E. No 100, Golden-lane, Barbican, E.C.

TO BRICKMAKERS and OTHERS.—TENDERS WANTED for about ONE MILLION of STOCK BRICKS, and about TWO HUNDRED THOUSAND WHITE SUFFOLK, or other equally good white facing BRICKS, to be delivered at Hartshorn-court, Golden lane, Barbican.—Conditions and further particulars can be seen at the Office of Mr. WILLIAM BURNS, C.E. No. 100, Golden-lane, E.C.

TO CARTERS, CONTRACTORS, and OTHERS.—TENDERS WANTED for about 400 Cubic Yards of BALLAST for Concrete, and 1,000 Cubic Yards of Sharp SAND, to be delivered at Hartshorn-court, Golden-lane. Intending Contractors can see the conditions at the Office of Mr. WM. BURNS, C.E. No. 100, Golden-lane, E.C.

TO LIME BURNERS, CEMENT MANUFACTURERS, and OTHERS.—TENDERS WANTED for about 300 CUBIC YARDS of GREY SKINS of LIME, and about 3,000 Bushels of ROMAN CEMENT, 3,000 Bushels of PORTLAND CEMENT, 3,000 Bushels of PLASTER of PARIS, to be delivered at Hartshorn-court, Golden lane, E.C. Further particulars can be seen by applying at the Office of Mr WILLIAM BURNS, C.E 100, Golden-lane, Barbican, E.C.—N.B Tenders for the above Well, Bricks, Ballast, Sand, Lime, and Cement, to be sent in to Mr WILLIAM BURNS, C.E. No. 100, Golden lane, Barbican, E.C. on or before THURSDAY next, 22nd OCTOBER, 1863.

London, October 15, 1863.

TO SEWER CONTRACTORS, BUILDERS, and OTHERS.—The Board of Works for the Plumstead District are desirous of receiving TENDERS for CONSTRUCTING about 2,856 feet lineal of BRICK SEWER, 20 feet by 3 feet in the clear, to extend from the present termination of the Ravensbourne and Lee Green Sewer, at Lee Green, in the parish of Lee, to a certain point opposite the Harrow Cottages, in Kidbrooke Road, in the parish of Eltham, in the county of Kent. All persons wishing to submit such Tenders can inspect the drawings and specification and form of contract for such new Sewer and Works at the Office of Mr. T. C. HAWORTH, Surveyor, at Eltham, Kent, or at the Office of Mr. F. F. THORNE, Surveyor, in Lee Road, Lee, Kent, where further particulars and Tender may be obtained. The Tenders are to be delivered, free of expense, at the Office of the Board of Works for the Plumstead District, at Old Charlton, S.E. at or before FIVE o'clock in the afternoon of WEDNESDAY, the 28th instant. The lowest or any other Tender will not be necessarily accepted.—By order.

CHARLES AUGUSTIN SMITH, Clerk to the Board.

Old Charlton, 14th October, 1863

TO MASONS and PAVIORS.—The Board of Works for the Wandsworth District are desirous of receiving TENDERS for the SUPPLY and LAYING complete of about 5,300 feet run of 12-inch by 8-inch DRESSED ABERDEEN FLAT CURB, and about 17,000 feet superficial of 3-inch TOOLED YORK PAVING, 4 feet wide, in the parish of Battersea. The specification can be seen at the Offices of the Board, as below, between the hours of TEN and FOUR. Tenders are to be sent in under seal, addressed to the Board, and indorsed "Tender for Paving Battersea," on or before the 23rd day of NOVEMBER next. Security will be required for the due execution of the Contract. The Board do not pledge themselves to accept any Tender.—By order of the Board of Works for the Wandsworth District,

ARTHUR ALEXR. CORSELLIS, Clerk to the Board.

Battersea Rise, Wandsworth, S.W October 15th, 1863.

TO MASONS, PAVIORS, STONE MERCHANTS, and OTHERS.—The Vestry of the Parish of Chelsea will meet at the Vestry Hall, King's-road, on TUESDAY, the 27th OCTOBER instant, at THREE o'clock in the afternoon, to receive TENDERS from persons willing to CONTRACT for the Works required for the EXECUTION of WORKS and for the SUPPLY of MATERIALS connected with the above trades, in the said parish, as may be required and directed.—Further particulars, with the form of Tender, may be had on application at this Office. Sealed Tenders, signed by the proposed contractor, with the names and description of two sufficient sureties for the performance of the contract, to be delivered to the Clerk by or before TWELVE o'clock on TUESDAY, the 27th instant. The legal charges of the contract to be paid by the contractor upon the execution of the same. No Tender will be received or accepted unless made on the printed forms.—By order,

CHARLES LAHEE, Vestry Clerk.

Vestry Hall, King's road, Chelsea, October 14, 1863.

[*For remainder of Contracts see next Page.*

CONTRACTS.

TO CONTRACTORS and OTHERS.—The Local Board for the District of Chorley (Alderley Edge), Cheshire, are desirous of receiving TENDERS for the EXECUTION of CONTRACT No 2, being the necessary Works in making and completing about 2,000 lineal yards of Brick Main Sewers. Plans and sections may be inspected, and specifications obtained, at the Office of the Engineer to the Board, Mr. S. C. TRAFF, 18, Cooper-street, Manchester, on payment of 5s. Sealed Tenders, endorsed "Tender for Contract No. 2," must be left at the Office of the undersigned, 16, Cooper-street, Manchester, on or before THURSDAY, 29th OCTOBER. The Board do not bind themselves to accept the lowest Tender.—Dated this 2nd October, 1863.

W. L. WELSH, Law Clerk to the Board.

TO BRICKMAKERS, DUST CONTRACTORS, SCAVENGERS, and OTHERS.—Notice is hereby given, that the Board of Works for the Fulham District are prepared to receive TENDERS, and to CONTRACT for the SALE and REMOVAL of the COAL-DUST, ASHES, and CINDERS from the Houses of the Inhabitants of the District, for a period of twelve months from the date of contract. The work to be done according to the specification, which, with the form of Tender, may be had at the Office. No other form of Tender will be received. The Tenders must be in a separate form for each one for the parish of Fulham, and one for the parish of Hammersmith; to be sent in sealed, and marked "Tender for Dust and Ashes" on the outside, on or before TEN o'clock of WEDNESDAY morning, the 21st day of OCTOBER, 1863, addressed to "The Chairman of the Board of Works for the Fulham District, Broadway House, Hammersmith." The contractor will have to enter into a written contract and bond, and to provide two good and sufficient sureties for the due performance of his contract, and will have to pay, on signing the contract, one fourth part of the money offered by him, and the three succeeding payments in advance of each quarter. The Board do not bind themselves to accept of any Tender.—By order,

W. LOVELY, Clerk.

CONTRACT for GUERNSEY GRANITE and KENTISH RAG.—The Chatham Local Board of Health are prepared to receive TENDERS for the SUPPLY of 200 TONS of best GUERNSEY GRANITE and 200 TONS of best KENTISH RAG STONE, free from hassock. The above to be broken to a gauge of 2 inches, and to be delivered on a wharf or into carts at Chatham, at the option of the Board, and at such times as the Surveyor, after acceptance of the Tender, shall require. Tenders to be sent to the Office, 311, High-street, Chatham, on or before the 21st OCTOBER inst. and the Local Board will not be bound to accept the lowest or any Tender Separate Tenders will be received for the above, and further particulars may be obtained of Mr. WILLIAM WREDEN, the Surveyor, Alma place, High-street, Chatham.—By order of the Board,

THOMAS HILLS, Clerk.

311, High-street, Chatham, October 10, 1863.

NOTICE to CONTRACTORS.—The Directors of the Dare Valley Railway Company are prepared to receive TENDERS for the EXECUTION of WORKS required for the formation of a portion of that Company's Railway, being in length about 24 miles. Further information may be obtained on application to the undersigned, at the Dare Vale Railway Company's Offices, Crockherbtown, Cardiff, on and after WEDNESDAY, the 14th instant. Tenders, addressed to the Board of Directors of the Dare Valley Railway Company, to be delivered at the above-mentioned Offices on or before TUESDAY, the 27th instant. The Directors do not bind themselves to accept the lowest or any Tender.—By order,

GEORGE FISHER, Engineer.

Cardiff, October 8th, 1863.

BOARD of WORKS, WHITECHAPEL DISTRICT.—A meeting of this Board will be held on MONDAY, the 26th day of OCTOBER, 1863, at SIX o'clock in the evening, at the Office, 15, Great Alie-street, Whitechapel, to receive TENDERS for the CONSTRUCTION of a BRICK SEWER, in Thomas-street, partly in the parish of Whitechapel and partly in the hamlet of Mile-end New Town, within the said district. Plans, section, and specification may be inspected, and further particulars, with printed forms of Tender, obtained on application to Mr. PRICKER, Surveyor, between the hours of TEN and FOUR, at the Office of the Board. Sealed Tenders, in which a lot note is to be inclosed, must be delivered at the Office, previous to the hour of meeting; and any Tender which is not upon the form prepared by the Board, and duly signed by the person or persons tendering, will be rejected. Persons tendering, or their representatives, are required to attend the meeting of the Board. The Board do not bind themselves to accept the lowest or any Tender. ALFRED TURNER, Clerk to the Board.

15, Great Alie-street, Whitechapel, 14th October, 1863.

TENDERS WANTED for the BRICKWORK of FOUR HOUSES. Labour and scaffolding only.—Apply to WM. LLOYD, 54, Haines-street, Battersea Fields.

TO CONTRACTORS and OTHERS.—Persons willing to contract with the Marshland Smeath and Fen District Commissioners, for the CONSTRUCTION of a NEW OUTFALL SLUICE, at the Outlet of the District Outfall Drain into the River Ouse, and the Works connected therewith, are requested to deliver sealed TENDERS for the same at our Office, on or before WEDNESDAY, the 4th day of NOVEMBER next. A specification and drawings of the Works can be seen on application to WM. PLEWS, Esq. C.E. King's Lynn; or at our Office in Wisbech. The Commissioners do not pledge themselves to accept the lowest or any Tender.—By order,

Wisbech, October 1, 1863. R. F. & E. JACKSON.

TO BUILDERS and OTHERS.—Persons willing to CONTRACT for the ERECTION of a VILLA RESIDENCE, to be built near the Durham Turnpike, Baltwell, Gateshead, may now inspect plans and specifications, and obtain quantities, at the Office of Mr. ALFRED SWAN, Architect, 50, Grainger-street, Newcastle, between the hours of TEN o'clock in the morning and SIX o'clock in the evening. Tenders will be received up to the 29th inst. The Advertiser does not bind himself to accept the lowest or any Tender

TO BUILDERS.—TENDERS are required for ALTERATIONS and ADDITIONS to the CITY MUSIC HALL.—Plans, specification, &c. can be seen daily at the Office of the Architect, Mr. WILLIAM FAICE, 11, Great James-street, Bedford-row, London.

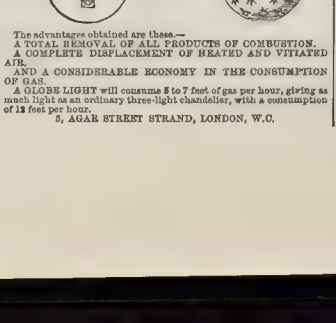
GEORGE JENNINGS,
Sanitary and Engineering Depôt, Palace Wharf, Stangate, Lambeth, S.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the MUTUAL LOAN FUND ASSOCIATION (Incorporated by Act of Parliament, 1850), 14, RUSSELL STREET, Covent Garden, W.C. Advances from 100l. to 1,000l. upon Freehold and Leasehold Property for any term up to ten years. Mortages redeemed, and the advance can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the repayment of the advance taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, or competition for an advance, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.
EDWARD HARPER, Secretary.

HENDERSON'S PATENT DERRICK CRANE.—Prize Medal for Practical Utility and Moderate Cost.

HENDERSON'S PATENT DERRICK CRANE, so extensively used in the building of the Exhibition, London, can always be had from the Makers, from 10 cwt. upwards. Portable, Foundry, Forge, Wharf, Quarry, Warehouse, and other descriptions of Cranes; also Steam Winches and Cranes (on the Derrick principle). Water Companies and others can also be supplied with our Improved Sluice Valves.—For further particulars apply to BOWSER & CAMERON, Makers, Springfield Iron Works, M'Neil-street, Glasgow.



CAST STEEL BELLS,
One-third THE PRICE OF BRONZE.

PEALS CAST TO ORDER.
NAYLOR, VICKERS, & CO.
SHEFFIELD.

CAUTION to ARCHITECTS and BUILDERS.—In consequence of complaints arising from the substitution of INFERIOR and SPURIOUS ARTICLES instead of SMITH'S PATENT DOUBLE-ACTION DOOR SPRINGS; SMITH'S PATENT WEATHER-TIGHT WATER BAR; and SMITH'S PATENT WEATHER-TIGHT CASEMENT FASTENING for FRENCH WINDOWS:
The above are most respectfully requested to observe that all GENUINE ARTICLES are stamped with the NAME and ADDRESS, SMITH, Patentee, 49, Princes-street, Leicester square, London; and SUCH ONLY are WARRANTED.

RICKETT'S & HAMMOND'S VENTILATING GLOBE LIGHT, combining an agreeable method of lighting, with convenient, simple, and efficient ventilation.

The advantages obtained are these.—
A TOTAL REMOVAL OF ALL PRODUCTS OF COMBUSTION.
A COMPLETE DISPLACEMENT OF HEATED AND VITIATED AIR.
AND A CONSIDERABLE ECONOMY IN THE CONSUMPTION OF GAS.
A GLOBE LIGHT will consume 5 to 7 feet of gas per hour, giving as much light as an ordinary three-light chandelier, with a consumption of 12 feet per hour.
5, AGAR STREET STRAND, LONDON, W.C.

THE INTERNATIONAL EXHIBITION PRIZE MEDAL, AWARDED 1862.
ESTABLISHED 1774.
AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES.
To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to draw the attention of the Trade to his
IMPERIAL PATENT FLAX SASH-LINES, of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to PATENT LINES made from Jute, which article has neither STRENGTH nor DURABILITY of Flax, consequently cannot give much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

PORTABLE STEAM-ENGINE, 10-horse power, by GARRETT & SON. It has only been used a few times, and is as good as new. Price, 200l; cost 285l. 5s. First-class NEW PORTABLE ENGINES, from 2 to 12 horse power, on reasonable terms.—Apply to BARROWS & CARMICHAEL, Engineers, Banbury.

STEAM-ENGINES and BOILERS combined, from 2 to 20 horse power, may be seen at work at THOMAS GREEN & SON'S, Smithfield Iron Works, Leeds, and 2, Victoria-street, Holborn-hill, London, E.C.
N.B. Winding Engines suitable for contractors, ship-owners, &c. Illustrated Price-lists on application.

MUSGRAVE'S PATENT STABLE and HARNESS FITTINGS
MUSGRAVE'S PATENT HARMLESS LOOSE BOXES.
MUSGRAVE'S PATENT IRON COW STALLS and PIGGERIES.

Architects who have not seen these fittings are requested to write for engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition.

They can be seen in first-class stables in almost every county in England; and MUSGRAVE, BROTHERS, are now fitting several very large establishments under direction of London architects, noted for employing only what is the best of its kind.

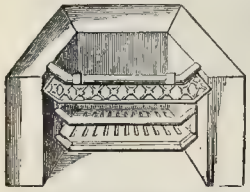
Musgrave's Patent Slow-combustion Stove

Is the nearest approach to Warming by Hot Water. It will burn in churches from Saturday till Sunday evening, without attention during the hours of worship. In halls will burn day and night for weeks, with little care. Capable of warming a large apartment for twenty-four hours, at a cost of 3d.; and deserving of special attention because of its safety, healthfulness, durability, and extreme simplicity.—For full particulars apply to

MUSGRAVE, BROTHERS, Ann-street Ironworks, Belfast.

BROWN & GREEN'S
PATENT KITCHEN RANGES.
PRIZE MEDAL, 1862.

These Ranges combine the latest improvements with great simplicity and durability. They afford facility for roasting meat in front of the fire without interruption to the action of the oven, hot plate, boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, and



CURE OF SMOKY CHIMNEYS,

these Ranges are unequalled. They are of all sizes and prices; and the large ones, fitted with Bath and Steam Apparatus, &c. form the most complete appointment for large establishments. Designs, &c. may be had on application at THE LONDON WAREHOUSE,

81, BISHOPSGATE STREET WITHIN.

"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept 6, 1862.

FIRE-LUMP STOVES,

EDWARDS & SON,
STOVE GRATE & KITCHEN RANGE MANUFACTURERS,
No 49, GREAT MARLBOROUGH STREET, REGENT STREET, LONDON.

THE IMPROVED OPEN FIRE KITCHENER,

Manufactured by
WM. OWEN,
PHŒNIX IRON WORKS,
ROTHERHAM,

Possesses all the advantages of the ordinary Close Fire Kitchener, in having excellent Hot Plates on top of Ovens, for boiling, steaming, or stewing, with the additional advantage of having a thoroughly effective and deep OPEN Fire for roasting purposes

The Ovens are heated upon Bradley's Patent Principle (under which W. O. possesses the sole right to manufacture), and by which a great economy of fuel is effected.

These Kitcheners are made of all qualities and sizes, suitable for all classes of houses, from the cottage to the mansion; and can be OBTAINED THROUGH ANY IRONMONGER in the UNITED KINGDOM.

THOMAS PUGH & CO.'S NEW PATENT ECONOMIC SELF-ADJUSTING MORTISE AND RIM LOCK FURNITURE.

J. B. SCAMMELL & Co. (late Thomas Pugh & Co.)
WHOLESALE IRONMONGERS,
13, KING STREET, SNOW HILL, LONDON.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in public and private buildings, in Her Majesty's Pavilion and Camp at Aldershot—alone, many hundred sets without one single failure. It is applicable to all Locks and Latches, both rim and mortise, and effects a most secure fastening, without any screw in the neck of the knob. Perfect action guaranteed in both Locks and Furniture, if the Locks are of our own manufacture.

New rich designs in glass, china, brass, bronzed, gilt, carved woods, inlaid, &c. &c. or to any design.

THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.

A most complete and extensive stock of every description of locks, latches, brass foundry, and ironmongery, required for buildings, of the best quality manufactured, at the lowest wholesale prices.

*** Illustrations and particulars sent upon application.

Sole Manufacturers. The Trade supplied on liberal terms.

FIRE-PROOF CONSTRUCTION.—
FOX & BARRETT'S PATENT.
This improved system of fire proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.
The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.
The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.
Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling houses and domestic buildings, within the reach of every one.
Further information may be obtained of the Proprietor of the Patent,
MR. BARRETT,

135, EUSTON ROAD, ST. PANCRAS.

Box Stone Chimney Pieces	from 6s. to 9s.	Truss Marble Chimney Pieces	from 50s. to 70s.
Marble ditto	28s. to 32s.	Truss Stone ditto	12s. to 18s.

Sheet of Designs sent free on application. Estimates for every description of Masonry.

STATUARY AND OTHER MARBLE CHIMNEYPIECES.

ARCHITECTS, BUILDERS, and MASONS will find at

W. WILLETT'S SHOW-ROOMS, MARYLEBONE ROAD,
OPPOSITE THE YORKSHIRE STINGO.

A LARGE ASSORTMENT OF STATUARY AND OTHER MARBLE AND STONE CHIMNEYPIECES, AT PRICES TO COMMAND THEIR ORDERS.
CARVED TRUSS STATUARY MARBLE CHIMNEYPIECE, 14-in. PIERS, FOR £6.

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

JAMES W. TYLER, CONTRACTOR FOR
DEVAUX'S VIEILLE MONTAGNE THICK ZINC ROOFING,
ON IMPROVED PRINCIPLES.
12, ABINGDON STREET, and 4, WOOD STREET, WESTMINSTER, close to Victoria Tower.

Estimates furnished for every description of Zinc Roofing and Guttering, inclusive or exclusive of Timber or Iron Framing, in all parts of England.
Having for several years been actively employed in laying DEVAUX'S THICK ROOFING ZINC (the purest extant) upon the new principles introduced by Mr. Edmeston, Mr. TYLER can refer with confidence to work done as his best recommendation.
Good Zinc badly laid will still be a failure, for there is much more importance in the mode of laying than is yet generally known; and parties who will intrust their work to Mr. TYLER will find that this important point is thoroughly attended to, and at no extra cost.
This Zinc thus laid is quite as lasting as lead, if the woodwork is arranged according to Mr. TYLER'S directions.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient, and particularly applicable for warm climates.
1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.
INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.
CROGGON and CO.'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c. and
DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c. preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.
Samples, testimonials, and full instructions, on application to
CROGGON and CO. 2, DOWGATE-HILL, London; and 2, GOREE PIAZZA, Liverpool.

PRIZE WAGGONS and CARTS.—HAYES & SON,
Manufacturers to Her Majesty's Board of Ordnance, and all the principal Railways in the Kingdom,
Coach and Cart Wheelwrights, Spring Van and Waggon Builders, Timber Merchants, Contractors, &c.
Manufacturers of Carts, Vans, Waggons, Trucks, and Implements for all Railways, Town use, Agriculture, and Exportation.
Contractors' and Builders' Dobbin and other Carts, Barrows; Navvy Excavators', Crowding, and Off-bearing ditto, on the shortest notice and of the best materials; &c.
HAYES & SON,
SCOTGATE WORKS STAMFORD.

The Builder.

VOL. XXI.—No. 1080.

"Going Along."
Vienna. The Votive Church.

E threatened to rave a little concerning the Royal Collections in the Belvedere; and if we were to do so, it would certainly be excusable. There are here 1,526 pictures, to say nothing of a number of modern works, in thirty-five apartments, and amongst them many of rarest merit. The palace was built from the designs of Jean Luc de Hildebrand, for Prince Eugene, of Savoy, about 1724, and afterwards became Imperial property. It is in the French-Italian style of that period, and is adorned with a large number of statues placed on the crowning entablature of the central mass of building, and the parapet of the wings. The collection includes a large number of pictures bequeathed to the Emperor in 1662, by the Archduke Leopold William, "as the most precious and most cherished objects" of his inheritance. David Teniers was the director of the Archduke's gallery, and there is an excellent picture by him in the Belvedere, representing the Archduke and himself, in a fine gallery hung with the pictures the Archduke had collected, and which are now in the Belvedere. There are several other remarkable pictures by Teniers, especially "A Village Fête in the Low Countries," and the "Fête of the Cross-bowmen in Brussels," dated by the painter, 1652. "Murray," for once, wrongly describes when he calls this picture "Shooting at the Popinjay." It represents the representation of a cross-bow by a deputation of the Guild of Cross-bowmen of Brussels to the Archduke Leopold William, the patron of the artist. Teniers has painted portraits of himself and family in the foreground.

Nearly all the schools are represented in the collection. In that of Venice, Titian, the unequal Tintoretto, Paulo Veronese, Giacomo Palma, and Alessandro Buonvicino, or Il Moretto, as he is called, shine marvellously. The picture by the last, who is less known in England than some of his contemporaries, represents St. Justina by the side of a man who is praying, and is a beautiful work. Amongst the Titians is the famous "Ecce Homo," wherein various portraits, including that of the painter himself, his friend Peter Aretino, and the Emperor Charles V. are recognizable. The figure of Christ is the weakest in the composition; the colouring of the whole is magnificent. It is signed by the painter, and dated 1543. There are a number of portraits by him, too, of the grandest kind. The number of representations of the "Madonna and Child" (there is one by Raffaelle, 1506, and one by Gian Bellini amongst them) is striking; and surprise is felt here, as elsewhere, at the multitudinous repetition of this group during a long period in the history of art. The fact is, it was not merely a representation, but the expression of a faith, a theological symbol. Mrs. Jameson, in her "Legends of the Madonna," puts it pithily. The Nestorians maintained that in Christ the two natures of God and man remained separate, and that Mary, His human mother, was parent of the man, but not of the God, and that consequently the title which had been applied to her, "Mother of God," was profane. The opponents of Nestorius maintained that in Christ the divine and human were blended in one incarnate nature. By decree of the Council of Ephesus, in the fifth century, Nestorius and his party were condemned as heretics: and thenceforth the representation of the Madonna and Child became the banner, as it were, of the orthodox faith.

Amongst the paintings of the Flemish school Rembrandt's head of his mother (1639) and portrait of himself, and Hoogstraeten's "Old Jew at a Window" (1653) take attention. The Vandyke room contains some marvellous portraits by that master, besides his great picture, "The Infant Saviour giving a Crown of Flowers to St. Rosalia;" and two rooms appropriated to Rubens contain forty-three works attributed to him. Prolific Rubens! No. 1 in these rooms, Ignatius Loyola before the Altar driving out Devils, is one of his finest works: the portrait of Helena Forman, Rubens' second wife, one of his best portraits. Of the works of the old German school there is an interesting and valuable collection. It has been justly said that Albert Dürer cannot be fully appreciated by those who have not seen his works in this gallery. Notice, in proof, the picture of King Sapor II. of Persia causing the Martyrdom of 10,000 Christians, and that of the Holy Trinity surrounded by a Glory of Angels, with Saints worshipping, truly grand. In both these the figure of the artist is introduced, bearing a tablet; the first inscribed—"Este faciebat anno Domini 1508 Albertus Durer Alemanus:" the second, "Albertus Durer noricus faciebat anno · a · virginis · partu. 1511." Dürer's first master was Michael Wohlgemuth, of Nurnberg, from whose hand there is a very remarkable picture here, an altar-piece with two pairs of wings. The principal subject is, St. Jerome with the Lion, a man kneeling on one side of him, a woman, a girl, and a child on the other. Numerous saints and royal personages fill the wings. The heads are expressive, and minutely finished. If the date with which it is said in the catalogue to be inscribed be correct, 1511, Michael was in his seventy-seventh year when he painted it. Of Lucas Cranach the elder, the contemporary of Dürer, and Burgkmaier, to some extent Dürer's follower, and whose engravings on wood illustrating the "Triumph of the Emperor Maximilian," every one knows, there are some good specimens. Ten or eleven pictures by Holbein the younger,—that is, our Holbein,—were looked at pretty carefully with reference to the recent discovery in London, by Mr. Black, of the will of a "John Holbeine," supposed to be the painter. If correctly attributed, the will shows that Holbein died in 1543, instead of 1554, as believed up to this time; and, consequently, that some pictures illustrating events that occurred after the first date, and supposed to be by this remarkable painter, are not so. Some later investigators strengthen Mr. Black's inference, and none of the dated pictures we saw in the Belvedere interfere with it. There is one portrait by Holbein of a man, marked Geryck Tybis, London, aged 33, and dated 1533, which has been mentioned in the discussion that has taken place; but the latest date we observed was on the portrait of a young man in a black pelisse, holding a book thus inscribed:—"*Anno Dñi* 1541. *Ætatis suæ* 28." Does any one know of a signed and unquestionable Holbein dated after 1543?

The authenticity of nearly all the so-called Van Eycks in the Belvedere, whether by Hubert or by John, is denied in Crowe's book. What an exquisite work, nevertheless, is that of the Virgin, crowned, holding the Infant to her bosom, in front of an elaborately-adorned throne! We should like to gossip of the Van Eycks and the medium they made known, but may do so better by-and-by in front of some of their admitted best pictures.

The Ambras Museum in the Lower Belvedere (formed originally in the Castle of Ambras), includes the collection of armour which is so well known and remarkable: in fact, in one point of view, the historical, it is the *most* remarkable collection of armour in existence. It consists mainly of suits which belonged to known eminent men, and these are set up and attended to in the most admirable manner, forming a beautiful sight. The stuffed skins of horses are used to show equestrian equipments, and the knights they carry are models of arrangement. As an exposition of armour of all times and countries, a national educational museum, or for artistic reference, it is less complete than might be expected, considering its world-wide reputation. Its strength is in armour of the sixteenth century, and splendid suits, both for man and horse, these are: such, for example, as those of S. Bathori, 1586, black and gold, exquisitely engraved; Herzog v. Olica, 1616, red and black; Christian Graf v. Fugger, 1615 (notice the scroll-work on the shoulder and on the pommel of the saddle); Sebastian Venieri, Doge of Venice, 1578; Alexander Farnese, 1592; and others. This last-named suit is an especially superb one, covered with highly-wrought figures and ornaments, though the forms are not very pure. Many caprices will be found in the collection, such as plaited petticoats of steel, arm coverings in imitation of sleeves of softer materials, and helmets in the shape of a bird's head: and there are, of course, other helmets of different dates, swords, jousting-lances of enormous size, with rests to match, and ponderous maces,—such as Richard Cœur de Lion might have used when,—

> "With hys hevy mase of stele
> There he gaff the kyng hys dele,
> That hys helme al to-rove,
> And hym over hys sadell drove."

When shall we see our own interesting and important collection of armour in the Tower of London properly attended to, and intelligently weeded and added to? It furnishes a large revenue, and might, without cost to the nation, be made the most perfect collection in the world, and of the utmost advantage in an artistic and educational point of view.

Of the other contents of the Ambras Museum, curious old paintings and portraits, carvings, jewelry, pieces of costume, the genealogical tree of Rudolf of Hapsburg (some of the heads full of character), and a cross-bow etched by Albert Dürer, who seems to have been ready to turn his hand to anything, and when he had done so, ever left it an object of desire, it is unnecessary to speak. We must run elsewhere.

What is known as the Treasury, or the Imperial Jewel Office, contains several curious matters, besides the splendid collection of precious stones. The so-called Crown of Charlemagne, although of ancient workmanship, would seem to be more recent than his time. Some embroidered robes, with worked figures of saints; a carved horn of ivory, dated 1199; sixteenth century pendant ornaments, or "jewels," as they are termed; egg watches; a carved crucifix, ascribed to Cellini; and a very curious clock, given to the Empress Maria Theresa, deserve examination. The clock is an elaborate contrivance. Effigies of the Emperor and Empress appear when it strikes, and a figure of Fame writes with a pen a sentence of praise on the face of it, the letters appearing as the pen proceeds.

In the streets there is something to notice. For example, the completion of the shell of a building in Vienna is more forcibly marked by the workmen there than with us, amongst whom two or three coloured pocket-handkerchiefs, stitched together and nailed to the top of a scaffold-pole, are the usual indication. In the case of one building we saw on the quay, the front was cleverly covered with elaborate greenery, intermixed tastefully with shields

and well-written inscriptions, including good wishes to the architect and the builder by name. Dr. Spurgin's material-hoister is in use at nearly all new buildings, both here and over the Continent generally, doubtless with as little profit to the ingenious inventor as its use in England has given him.

Good wine, it seems, *does* need "a bush" in Vienna: at any rate a bush is still seen over the door of many wine-shops, as it is also in other parts of Germany, France, and Italy. In some cases an artificial construction of hoops and leaves, intended to represent a bush, is used instead. A similar counterfeit bush was once in use in England. A story is told of a landlord in Aldersgate-street who, when King Charles I. had his head cut off, painted his bush black, to show his sorrow, and so led to his house being long called "The Mourning Bush at Aldersgate."

One is startled in the narrow roughly-paved streets to find palatial residences of size and grandeur; decorated within, too, at great cost. The streets are necessarily very noisy, and to lessen this inconvenience, as well probably as to guard against strong atmospheric changes, double windows are largely resorted to, with injury to the appearance of the house fronts, which are thus flattened,—the extra window lessening the depth of the recesses. A much worse evil, however, attends all this, and that is the entire absence of ventilation in bed-rooms at night. Even in the best hotels, the *Hôtel de l'Empire Romain*, for example, where we stopped, sleep is scarcely possible in the smaller bedrooms in warm weather in consequence: if the windows be left open the noise, and if they are closed the want of fresh air, prevents it. The use of some means for admitting and emitting air, irrespective of the windows, is loudly called for: and it is not alone in Vienna, by the way, that this great want is felt.

There must be other deadly agencies in operation in Vienna, if the annual death-rate officially reported be correct. In London, on an average of ten years, twenty-four persons out of every thousand die each year, and this is greatly in excess of some of the healthiest parts of England where, as at Eastbourne, *formerly*, for example, only fifteen persons out of every thousand died each year. Even in districts of London, sixteen or eighteen in the thousand is the usual death-rate. Now, in Vienna, an average of forty-nine persons out of every thousand die each year; so that if the population be taken at 580,000, which is probably correct, *fourteen thousand five hundred persons die every year merely because they reside in Vienna instead of London!* Much of this frightful waste of life and its accompanying misery to survivors might surely be prevented. Here is a noble work that wants doing. We recommend it to the attention of the Emperor. A commission of inquiry should at once be issued (not to-morrow, but to-day) to a certain number of enlightened, disinterested, and instructed men, including, if it could be arranged, two or three Englishmen who have given special attention to the subject. Causes being made evident, remedies could be pointed out, and weakness, misery, pauperism, crime, and death, would be lessened, just as certainly as that good food, if taken, will nourish, and prussic acid, if taken, will kill. Would it not be well, O Emperor, that history should say:—

"In the reign of Francis Joseph Charles life was lengthened and sorrow abridged in this city of Vienna?"

Especially, too, as the present,—men, women, and children of to-day,—would reap the advantage of the steps that might be taken.

However, we must be "going along;" and before quitting Vienna we will take the kindly reader once more to the glacis, that we may say a few additional words about the Votive Church there, and show the aspect it will present. It was subscribed for in all parts of the Austrian Empire, as a monument of gratitude for the preservation of the Emperor's life. It will therefore be called the Church of the Saviour; and with reference to this dedication a row of typological representations in the principal façade will set forth the work of salvation. The church originated in 1853, and its first stone was laid in 1856. The design of the architect, Herr Ferstel, of Vienna, was selected in competition, and to him, in conjunction with the Master Stone-cutter of the city, the superintendence of the work is entrusted. The plan, let us add, includes a nave and two aisles, with side chapels, transept, and choir; and round the choir-aisle, semicircular in plan, there is a wreath of seven apsidal chapels.* The material used is a limestone from the neighbourhood of Wiener-Neustadt, and the ordinary masons, they tell us, have now acquired sufficient skill to execute the carving of the corbels, the capitals, and the "water-spitters." It will be the best reproduction of Pointed architecture yet effected in Germany; and with that agreeable sentence, meaning also verdict, we may as well end the chapter.

THE LAW OF BUILDINGS, LAND, AND PUBLIC WORKS.†

The branches of the law which require an architect's attention in order that he may successfully practise his profession, are very numerous. The Metropolis Building Act, and Local Management Act; the various local improvement and health Acts applicable to the country towns; the laws relating to arbitrations, building-societies, burials, and contracts; to freeholds, leases, and copyholds; dilapidations and fixtures, and other divisions of the law of landlord and tenant; to highways, water-rights, sea-defences, partnerships; and patents, designs' registration, and copyright in general; are only some of the items of a list. But, each of the branches, to be understood, requires a watching of the proceedings of the courts; and such attention, few members of our profession are able to give. The books presenting results of the *cases*, therefore deserve to be known to architects.

The book now before us, however, is one of this class of works, rather than a treatise explanatory of some of the departments of the law of which the knowledge is important to the architect. There is no preface to the Essay; and the first chapter, on "Waste," commences with,—"The principle upon which waste depends," &c., rather than with definition of the term. In the second chapter, however, which is on "Nuisance," and in the third on "Trespass," the definition starts with the opening sentence. These terms are the headings of the three first chapters: the fourth chapter is on "Construction of Public Works."

The volume, as we have said, is rather a digest of *cases*, than a treatise elementary or rudimentary, or a complete body of the law; and the remark applies especially to the matter of the fourth chapter, wherein the questions considered are mainly those which arise between landowners and persons who have obtained parliamentary powers to construct canals, or railways, and do not include those of the specific performance of contracts. This Essay by Mr. Yool, however, is one giving much information on points of the law and equity of the subjects named in its title. The mere list of the *cases* which are referred to, fills about twenty-five pages; and the digest of these, which forms the body of the work, is so condensed, and so arranged with marginal references, foot-notes of the *cases*, and a good index, that the book must be invaluable to lawyers, for all questions of remedy for waste, nuisance, or trespass.

Waste appears to be capable of definition as damage done to a leasehold, or an inheritance; and it "may be either (1) By diminishing the value of the estate; (2) By increasing the burthen upon it; (3) By impairing the evidence of title." Even that which increases the value of the estate may be waste, if the act "damages the inheritance in either the second or third of the above modes. Such acts are termed Meliorating waste." Waste is either *voluntary* or *permissive*. The former of these consists in commission of acts which the tenant has no authority for, as pulling down buildings, felling timber, or opening mines: the second arises from the omission of what was the tenant's duty, as, for example, in the case of suffering buildings to go to decay. Beyond knowledge of these definitions, however, there is much required, as with reference to questions of against whom, and by whom, proceedings may be taken. Thus, it "is said that an action for waste will lie by a copyholder in remainder against a copyholder for life, but not by the lord of a manor against his copyhold tenants;" though, "according to the later authorities," an injunction would lie in the latter case: whilst, in Ireland, it has been settled that "the holder of a lease for lives, renewable for ever, is not at liberty to commit destructive waste;" though "it seems that he may commit meliorating waste." Incident to every estate for life or for years, is "the right to take estovers, that is to say, so much wood, stone, &c., as may be required for repairs, husbandry," and so forth. But, in addition, it is a common practice in family settlements to provide that the estates of the tenants for lives shall be *without impeachment of waste*. Still, proceedings may be taken successfully in the courts of equity to prevent waste, though there would be no remedy at law. Thus, a tenant for life "without impeachment of waste," has been restrained from exercising his legal power. This seems to be the reason of a distinction between "Legal Waste" and "Equitable Waste," the headings of the two first sections of Mr. Yool's chapter on waste in general. The aggravated acts of waste or of a character destructive to the inheritance, or of wanton mischief, which the courts of equity have assumed jurisdiction to restrain, are such as pulling down the mansion, or other buildings, felling ornamental or very young trees, or destroying underwood. Sometimes a question would arise as to what constitutes timber. Oak, ash and elm, are timber everywhere; other trees are according with custom of particular counties. The general property of timber-trees is in the lessor but the lessee has property in the fruit and shade as well as a general property in bushes and trees which are not timber, though he must not cut them so as to injure their future growth. Even if the lease mention the trees, this does not give right to fell them. There is, however, an exception in the case of fruit trees planted as by a nurseryman, for purposes of his trade. The case of timber, and other trees, and underwood, especially ornamental timber, however, requires too much detail of explanation to be here gone into. After consideration of the description of waste just mentioned, comes the question of waste in minerals, which also we must pass by.

The sections headed "Waste in Buildings," "Landlord and Tenant," and "Mortgagor and Mortgagee," will be deemed by our readers, three of the most important in the work. It is difficult, however, to select from the information afforded or to present it in words more condensed than those of our author. The case of destruction of house by fire is not now waste: "the landlord's action against the tenant has been taken away by statute." But "a lessee who covenants generally to repair, is still bound to rebuild after a fire; moreover, "whether the lessee is bound to rebuild or not, he remains liable to pay the rent." Permissive waste, as by a tenant for life, is interfered with by the courts of equity under special circumstances, and injunctions may be granted. "The legal powers of a tenant for life without impeachment of waste to deal with the buildings as he pleases are very much limited by the doctrine of equitable waste." In the *Raby Castle Case*, the tenant for life was pulling down the principal mansion-house. He was required to "put it in the same plight and condition it was in at the time of his entering thereon." As respects the treatment of premises demised, the relation of a tenant to his landlord "is usually defined by the custom of the country or by express agreement, the tenant remaining in addition under the obligations imposed by the common law, except so far as they may be excluded by the terms of the tenancy." But acts "of like mischief with acts of waste," not essentially breaches of the common law, seem to be restrainable by injunction. Some of the *cases* quoted, as cases of waste at the common law, and others as breaches of agreement. "This distinction has been drawn, that whereas acts of pure waste are restrained on the ground of irreparable damage, in cases of contract the person entitled in possession subject to the lease has a right to insist on the performance of the stipulations, *modo et for-*

* See p. 741. In length the church is 995 feet. The width of the nave and aisles, including chapels between the buttresses, is 95 feet; the transept is 158 feet between the walls. The height of this and of the nave is 91½ feet. The western towers and spires are 307 feet in height, and the central *flèche* is 223 feet.

† "An Essay on Waste, Nuisance, and Trespass, chiefly with Reference to Remedies in Equity; treating of the Law of Timber, Mines, Lights, Water, Support, the Construction of Public Works, &c. &c." By George V. Yool, M.A., of Lincoln's Inn, Barrister-at-Law, late Fellow of Trinity College, Cambridge. London: W. Maxwell; 1863. 8vo., pp. xxxii. & 267.

irrespective of the question of damage." As to the case of mortgaged property, a mortgagee in possession must not commit waste, and he is bound to do necessary repairs. But there are exceptions to this, in the use of timber and mines, when the security is otherwise insufficient. Waste where ecclesiastical corporations are concerned, has a distinctive section devoted to it in Mr. Yool's volume; but it is remarked that Acts have recently been passed by which episcopal and capitular estates will be regulated.

As to what constitutes *Nuisance*, it may be first remarked that there is a "refined distinction between direct and indirect injuries to real property." "Injuries to easements," says our author, "and such injuries to natural rights of property as do not directly interfere with the possession of the soil, are nuisances." A distinction has been made between a nuisance of a public, and one of a private nature; but the courts of equity will interfere in both of the cases, though only where the thing complained of is a nuisance at law. A question once arose whether the frequent ringing of the bells of a Roman Catholic church, close to the plaintiff's residence, constituted a public nuisance. The Vice-Chancellor Kindersley then observed, in effect, that to constitute a public nuisance, a thing must be a nuisance or injury to all persons coming within the sphere of its operation. Such a nuisance was that of noxious fumes from a manufactory, or the stoppage of a highway, but was not that of the sounds in question, which might be even pleasureable to persons at some distance. Whether the nuisance be public or private, a judgment at law seems to be desirable or necessary precedent to any application for an injunction. And it does not seem the courts of equity would interfere where damages would be adequate compensation. They would interfere where the prevention by injunction, as well as the pecuniary compensation, would be required. The Court of Chancery interferes where the extent of the damage and injury is such that the law will not afford an adequate and sufficient remedy; and it has been held that this position of things is not experienced oftener in the case of public than in that of private nuisances.

One of the Nuisances to Dwelling-houses which most frequently calls for the interference of the Court of Chancery, is the interruption of the access of light and air to windows, by an erection on neighbouring land. Lord Eldon indeed said that the Court would not in all such cases interfere. To secure an injunction, or maintain an action, it seems the case as to the deprivation of light and air must be very plain. The latter, however, might be maintainable in many cases that would not secure the former. The shutting out of a prospect is no ground for interference. An invasion of privacy by a new window in a neighbour's house, is no ground for suit or action, unless there be breach of an agreement: "the remedy is to block the new window up."

But, besides that the right to passage of light may be given by express agreement, there is such a case as that where a severance of one part of ground from the other, has been made by the original owner of the whole; and where a house had been erected on the first portion of the ground and sold, the second portion being parted with subsequently, to a different purchaser. It was resolved that "as the builder himself could not stop the lights, as that would be to derogate from his own grant, so neither could any person claiming under him;" and in cases where a man was known to have taken certain premises for a trade especially requiring light, it has been "said that the landlord would not be allowed to diminish the light in the slightest degree." There may, however, be "considerable difficulty respecting lights" in a case of severance; for, it is settled that a reservation of easements of necessity can be implied, as for the enjoyment of the part of the property retained. According to one judgment, supposing "the land had been sold first and the house after, the vendee of the land might stop the lights;" whilst, according to another,—"whether the land be sold first or afterwards, the vendee of the land cannot stop the lights of the house in the hands of the vendor or his assignees." Where two houses built by the same proprietor about the same time, and intended as part of a general plan, have been sold in an unfinished state, at the same sale, to different persons, the window-openings being sufficiently marked, it has been held that "a condition was implied that nothing should afterwards be done by either purchaser, by which his neighbour's windows might be obstructed."

"There are," says Mr. Yool, "three modes of establishing a title to an easement by user, (1) By sufficient evidence of enjoyment during the whole time of legal memory; (2) By proof of enjoyment for such time and under such circumstances as will justify the finding of a lost grant or agreement since the commencement of legal memory; (3) By proof of enjoyment for such time and under such circumstances as will justify the provisions of Lord Tenterden's Act."* As to the first mode of proof, a period of little more than one hundred years has been deemed sufficient to warrant a jury in presuming the condition of things to have existed time out of mind. A title made out in this manner, is a title by "prescription," strictly speaking; though the term is frequently used of titles made out in the second and third modes. Prescription supposes a document creating the right, to have existed before the time of legal memory. To prevent the failure of an old title, where the commencement of the enjoyment could be shown to be subsequent to the time of legal memory, "the fiction which is the basis of the second mode of proof," was introduced. Our author has "pointed out that no action lies against a man for opening a new window which overlooks his neighbour's lands;" and, he says,—

"... consequently light is an exception to the general rule that the exercise of an acquired easement must, in the first instance, have been legal, for this reason it is called a negative easement.† Now, in the case of affirmative easements, if the owner of the land over which they are being exercised brings no action, and takes no step to obstruct the acts of enjoyment for twenty years, his acquiescence gives rise to the presumption of a grant of the easement having been made and lost; and, by analogy to this doctrine, although the right of light perhaps does not lie in grant, and acts of enjoyment give no cause of action, yet if the owner of the neighbouring land allows the windows to remain unobstructed for twenty years, this is a sufficient foundation for the presumption of an agreement or covenant by him not to obstruct them."‡

The anomaly of requiring a jury to find the existence of a grant or agreement where in all probability no grant or agreement ever existed, continues our author, led to Lord Tenterden's Act, intended to answer the same purpose, or to prevent the title to matters long enjoyed, being defeated by showing the commencement of such enjoyment. "The third section" of this Act, "provides with regard to light," quoting from the book now before us:—

"'That when the access and use of light to and for any dwelling-house, workshop, or other building, shall have been actually enjoyed therewith for the full period of twenty years without interruption, the right thereto shall be deemed absolute and indefeasible, any local usage or custom to the contrary notwithstanding, unless it shall appear that the same was enjoyed by some consent or agreement expressly made or given for that purpose by deed or writing.'"

Our author then observes:—

"By the construction placed upon this section together with the fourth, it appears that there must be twenty years from the commencement of the right or enjoyment to the commencement of the suit, and that no interruption is to be considered as preventing the twenty years from running, unless it has a duration of one year, so that if there has been an enjoyment for nineteen years and a fraction, and then an interruption takes place, the right may be established at the end of the twentieth year."

Should a lessee "allow a valuable right to be acquired against his landlord's property," "it is difficult to say what remedy, if any," the landlord would have.

The privilege of receiving light through a particular window may be lost, where the window has been blocked up with bricks and mortar for twenty years, or for a less period where the intention is manifested of abandoning right of using the window, or so as to lead the neighbour to incur expense; and it may be lost by pulling down, or altering the buildings, so that for two or three years, intention of re-building may be taken to be abandoned; and an owner who re-builds, or alters, is not entitled to more light than he enjoyed before: his new windows must be neither larger nor more numerous than the old. When the new windows are only partially in the same positions as the old ones, such portions of the new apertures as were open before, remain privileged. Yet the whole may, it seems, be obstructed until the windows are restored to the former condition. Cases have occurred in which the owner of a house having removed an obstruction to light, which had existed on his own premises for more than twenty years, it has been suggested that the adjoining owner may be entitled to erect an obstruction as great; but it appears only to have been settled that heavy sashes and frames may be replaced by others of lighter construction. The privilege of receiving light carries with it that of receiving air; so that a neighbour may not obstruct the windows having the privilege, by a transparent screen or skylight. Currents of air for trade purposes, such as drying timber or serving a wind-mill, can be retained only on evidence of their having existed from time immemorial; and "Lord Tenterden's Act does not apply to any negative easement except light." The whole statement of the matter of nuisance to dwelling-houses, by interruption of light and air, is supported, as are the statements throughout the volume, by reference in foot-notes to numerous cases, as well as to such works as "Gale on Easements," "Law of Dilapidations and Nuisances," and "Best on Presumptions."

Questions "as to the manner and place in which brick-burning may be carried on so as not to be a legal nuisance" frequently arise, as our volumes show. The *cases* are now treated by Mr. Yool at considerable length. We may say that in one of the older *cases*, *Barwell* v. *Brooks*, the points discussed were:—1. Whether there had been acquiescence? 2. Whether brick-burning was a nuisance? 3. Whether a court of equity would restrain a qualified use of it for the temporary purpose of building? The injunction was granted; and the clay seems to have been clay of the same land. In *Hole* v. *Barlow*, a *case* which "has been the subject of much comment," the clay had been carried to a place close to the plaintiff's house, and there burnt. Two questions were left to the jury; the first was whether the place of burning was a proper one; and supposing this decided in the negative, the second was, whether the nuisance was such as to make "enjoyment of life and property uncomfortable." The verdict was for the defendant. But this *case* was expressly overruled in *Bamford* v. *Turnley*, where even the plaintiff had purchased his house on conditions mentioning that the adjoining land was fit for brickmaking. The *case* may be regarded as further important, since the defendant had not merely worked up the earth of his own land, but had accumulated heaps of ashes brought from other places, and since the jury were directed that if the spot was a proper one, and the burning was a reasonable use by the defendant of his own land, he was entitled so to use it, whether the plaintiff's comfort was interfered with or not. In the Exchequer Chamber, however, it was ruled, that as an offensive trade could be indicted as a public nuisance, so it would be actionable where it greatly incommoded an individual; although it was said that acts necessary for the common use of lands and houses, as burning weeds and making noises during repairs, might "be lawfully done, if done in a reasonable way." In each of these three *cases*, the parties complaining had taken their houses knowing the probability of the brick-making on the adjacent land. But this would still leave the question, one of much wider bearing than that of brickmaking, whether the coming to a nuisance would involve deprivation of the remedies whether in equity or at law. Lord Tenterden, indeed, once ruled, that a person is entitled to continue his trade, if it were previously established remote from habitations, though become a nuisance through the approach to it of public roads and houses. "But," says Mr. Yool, "this is probably not now law;" at least he only alludes to exceptions where a right to carry on the trade "has been acquired by prescription."

Besides the cases of nuisances to dwelling-houses that have been mentioned,—some of which must include nuisances to buildings of other descriptions,—equitable relief has been sought in the cases of soap-boiling, coke-ovens, smoke of a steam-engine, gas-works, bell-ringing, manufacture of gunpowder, obstructing a chimney, and even holding a regatta. A brewhouse "is not necessarily a nuisance;" and a hospital for infectious diseases seems to be in the same position. There are, however, the important cases of "nuisances relating to support," or which may concern the structure and maintenance of buildings. To these, our author devotes a separate section. He previously treats of nuisances relating to water. We may here note, that other *cases* of nuisances brought before the Court, include those of obstructions and other damage to a navigable river, a canal, a mill-race, a ferry, a highway, a private right of way, a private siding to a railway, a colliery way-leave, the entrance to a vault, a market, a right of stallage, ground dedicated to public recreation, and the construction of a railway, besides damage to crops.

There can be no division of a work of this kind, more important than one treating of the "Nuisances Relating to Water;" and this section of Mr. Yool's chapter on nuisances, deserves to be studied in parts of England, midland and northern districts, where the wants of manufactures, the use of water for drinking and domestic purposes, the beauty of streams, and the outfall for drain-

* "2 & 3 Will. 4, c. 71."
† "Gale on Easements," 3rd edit., p. 18.
‡ We omit the note of *cases*, here.

age, have to be considered in the legal or equitable point of view, as in more than one other aspect. Our limits, however, allow a mere reference to the value of the section; and it is only justice to the author to say that the *resumé* that we can give of any section, or have attempted to give, would be no substitute for the volume itself. But it may help to the popular comprehension of *cases* of right to the use of running water, that are constantly reported, to state that *primâ facie* the riparian proprietors own half the land covered by a stream, whilst that there is no property in the water. Every one has equal right of use of the water, and no one proprietor can use it to the prejudice of another. He cannot diminish the water which would otherwise descend, or throw it back upon the proprietors above. Still, this permits such use of the water as for irrigation, even though there may be a small percentage of loss by evaporation and absorption before the main quantity returns to the original channel. The original title of riparian proprietors to have the water of streams in the natural purity, seems to be clearly settled where there is no established right to an easement, as from twenty years' continuance of such a practice as that of discharging foul water. But, a claim to foul a natural stream is within Lord Tenterden's Act. Artificial streams involve special questions between the upper and lower proprietors. The general law respecting the right to streams is not applicable to water which does not flow in any defined channel: a landowner may therefore collect such water. One of the most recent *cases* of application for injunction to restrain the pollution of streams, *Wood* v. *Sutcliffe*, shows that there may be considerable difficulty in getting the injunction, where the pollution has been allowed to go on for any time, or could be compensated by damages.

In the matter of "Nuisances relating to Support," the first point to notice is that the Common Law,—

"... gives to every landowner the right to have his own soil in its natural state supported by the adjoining soil or by some equivalent, so that no one is entitled to remove his own soil in such a manner as to cause his neighbour's land in its natural state to fall in."

In mining districts, however, "the surface and the strata lying under it frequently belong to different persons;" and there is some difficulty when the surface soil has been weakened by excavations or mining, whether there is a natural right to additional lateral support. Ordinarily, the owner of the surface unencumbered by buildings is entitled to have it supported from below. The "rights of lateral and vertical support extend to buildings not so heavy as sensibly to increase the tendency of the soil to subside." But "there is no right of support from the adjacent land for new buildings which exceed that weight." As intimated, however, "there may be such a right of vertical support." It seems that right to lateral support for heavy buildings from the adjacent soil, may be acquired by twenty years' enjoyment. A right of support from the subjacent, or adjacent strata, in excess of the ordinary common-law right, may be constituted from the manner of the severance; that is to say, a person who has granted part of his land, may be unable to deal with what he retains, in any way to cause that which he has granted to sink or fall.

The question is constantly arising in the practice of architects, whether ancient buildings have acquired right to support by adjoining buildings, through the enjoyment. Mr. Yool says it "is very doubtful."

"Such enjoyment will in general be secret, and even if not, there is no way of obstructing it, except by the neighbour who is injured pulling down his house. On the other hand, where the dominant messuage visibly overhangs the adjacent soil, some action may lie, so as to make this an affirmative easement, and therefore to bring it within Lord Tenterden's Act. There is no clear authority on the point; but the tendency of recent decisions is adverse to the acquisition of such an easement by long enjoyment only."

But, mutual rights of support between buildings may, like other rights of the like kind, proceed from an original unity of title.

We have not much space for the consideration of the two remaining chapters of Mr. Yool's volume. We may, however, explain what is the nature of *Trespass*. The author's definition is, "An illegal entry upon, or immediate injury to, real property corporeal in possession." The jurisdiction of the Court of Chancery to grant injunctions "was formerly not exercised in cases of pure trespass." Usually the acts of trespass have arisen in some confusion of boundaries.

It is well never to forget that, contrary to a not uncommon notion engendered by the delays of the Court of Chancery, the action of the Court is in certain procedure much more swift than that of proceedings at law. Injunctions of the Court in cases of trespass offer evidence of this. In the *case* of *Robinson* v. *Lord Byron*, the defendant at one time stopped water flowing to the plaintiff's mill, and at another allowed it to go in excessive quantities. An injunction was granted on the ground of the irreparable mischief that would have been done to the mill, before there could have been any trial at law.

"In *Clowes* v. *Beck*, the plaintiff alleged that he was seised of a tract of land between high and low water-mark, from which the defendants had carted away a great quantity of shingle and sand for the purpose of repairing the highway, and that the consequence would be that the sea would encroach upon the plaintiff's lands, upon which his mansion stood, to his great and irreparable injury. The answer denied the plaintiff's title, and that any injury would ensue, and justified under certain Acts of Parliament. An injunction was granted before the legal right was determined."

The Chapter on "Construction of Public Works" is devoted chiefly to the Lands Clauses Consolidation Act (with respect to the Purchase of Lands by Agreement, or otherwise), and to the Construction of a Railway.

It will have been seen that this "Essay on Waste, Nuisance, and Trespass," is not all sufficient for the purposes of our profession, even in the branches of the law on which it treats. To students, it supposes much to be known,—as, for example, the distinction between the business of the courts of equity, and that of the courts of law; whilst the architect-reader must often be compelled to find the utility of the book, far within what it might have been to him with the addition of half a dozen explanatory sentences. We may also observe that the presence of "Addenda and Corrigenda," to the extent of, as here, more than a page, does not prepossess the reader, any more than the reference to "Appendix," there being no Appendix to be discovered. But, however improveable, the work is essential as an index, and guide to, and a digest of, the law on many of the most important matters connected with building; and it deserves to be procured and carefully gone through by all the profession engaged in the practice of architecture and building, as well as by the profession of the law.

THE DESECRATION OF BURIAL PLACES IN IRELAND.

To any one who has, in his wanderings, been in the habit of turning aside into the wayside churchyards of Ireland, the energetic and able letter of Professor Donaldson requires no corroboration. It is an unhappy fact that a vast majority of the last resting-places of the dead are as he describes them,—many very much worse. The causes to which this is to be ascribed, in a country where a remarkable reverence for the dead pervades all classes, are unaccountable in a great measure; and it is important that they should be ascertained, if possible, as a first and necessary step in remedying so deplorable a state of things. It has appeared to me to arise in many cases from the fact that many ancient graveyards are nominally under the control of the rector of the parish, while almost exclusively used for interment by his Roman Catholic parishioners. From a consequent want of community of action in the use of them as places of interment, a certain amount of apathy exists as to caring for them. For this the remedy is very simple,—a harmonious effort on the part of their legal guardians, and those who are more immediately interested in their decent preservation.

If attention were once directed to it, the good feeling necessary is not wanting; and I could quote instances where the clergy of different creeds have laudably vied with each other to effect a radical improvement in the state of their common parish churchyards. Another evident cause is the frequent absence of owners of the soil, and their consequent ignorance of the state of these sequestered cemeteries, to which I have no doubt many only require their attention to be directed to effect an improvement. An innumerable number of these desolate melancholy places occur to me on reading the letter above referred to;—the crumbling ruins of a desecrated church standing in their midst, all unenclosed and worse than neglected. One instance I select, as it appears to me discreditable to a public body, who, I was informed, should be its natural guardians. Some time since, I wandered into the churchyard of a parish in the county of Kildare, which has, I believe, no rector or vicar to care for it, the revenues arising from it being appropriated to the Ecclesiastical Commissioners. I was chiefly attracted by the circumstance that the remains of the once busy rebel Wolfe Tone lay in the quiet shadow of its ruined church. It was melancholy to witness the state in which I found it; cattle straying at will through the neglected wilderness, and making it such a place as cattle left to their own devices in such a place only can; and, on prosecuting my searches further, I found the body of the roofless church carefully cleared, and *appropriated as a ball court*; and doubtless to this day many an exciting game goes on day by day over the heads of the silent and uncomplaining dead below.

While on the subject of graveyards, may I direct attention to the enclosed extract from the proceedings of the town improvement committee of the corporation of the rapidly-rising and important town of Belfast, which is the very heart of the enterprise and energy of the country, and whose rate of progress in wealth and commerce has been unequalled by even that of Liverpool itself in its earlier days. Among certain other social evils which require a remedy, in spite of its boasted energy and enlightenment, that of the graveyard referred to is one of the most crying ones. Language utterly fails to convey a notion of the state it was in eighteen or twenty years ago, when I last had strength of mind to visit it. On an occasional visit since, I have frequently *smelt* it a considerable distance, and shudder to think of the state it must be in now.

I learn, also, from the proceedings of the Board of Guardians that the burial place set apart for the interment of the paupers was liable to be flooded by water, and that one or more chaplains, I now forget which, thought it unnecessary to perform any burial service over the remains, alleging that the admonitions thereof were thrown away on the limited number of paupers who conveyed the remains to their last resting-place.

To this state of affairs the well-ordered and beautiful cemeteries of the City of Dublin, at Glasnevin and Mount Jerome (where a host of celebrities lie buried), present an agreeable contrast, and one returns from a visit to them with even fresh pleasure.

Before concluding, may I digress from my subject and suggest, with very great deference, that much good might be effected should the editor of the *Builder* have leisure to turn his attention to the important town (Belfast) which I have referred to, and do it the honour of investigating its social and sanitary state in an article on the Condition of our Chief Towns. Its grave-yards; its lamentable want of a proper water-supply; its pestilential river in its midst, and the fever consequently prevailing so universally at present;—these, and other social evils, deserve as much to be unsparingly investigated and reprobated, as its important public buildings (rapidly rising), its interesting and extensive manufactories, its thriving port and commerce, deserve and repay a visit, and claim admiration and just praise.

X. Y. Z.

"MODEL DWELLINGS."

At the last meeting of the Society for Improving the Condition of the Labouring Classes, the Secretary reported that a new model lodging-house has been lately erected in an open space in Commercial-street, in a line from Whitechapel to Shoreditch, a new thoroughfare of good dimensions, and dividing in its course many smaller streets abounding with dark and narrow alleys and courts. In this crowded locality the inhabitants are principally Jewish poor, who are compelled by their daily avocations to live near the neighbourhood. The building contains accommodation for thirty families. Each set of apartments possesses a separate entrance, and is wholly complete within itself, — living-rooms, bed-rooms, scullery, with water-closet, pantry, coal-cellars, &c. The ground floor is appropriated for shops.

The building will be shortly opened.

The Metropolitan Board of Works has assented to an application from Mr. J. A. Mays, the secretary of the Improved Industrial Dwellings Company, asking for leave to erect, on a piece of land close to the Great Northern Railway Station, King's-cross, several large blocks of dwellings, after the model of those recently built for Alderman Waterlow, in Finsbury. The dwellings will comprise separate and distinct houses for about a hundred families.

NEWCASTLE-UPON-TYNE IN A HANDBOOK.*

To have been born at Newcastle is a reputation in itself, more to be preferred than to have been born with a caul or with a silver spoon in one's mouth, or, apparently, with any other congenital advantage with which we are acquainted. In the colonies, we are told, if a man meets with another who has lived in the same street, or the next, or the next but one, two, or three, to that in which any relation or friend in the mother country is living, or has lived, the fact is considered equal to a letter of recommendation, and he is made welcome to a seat by the fireside and a knife and fork at the table, without further credentials. In the same way, in the north country, it would seem, a man has but to be born in Newcastle, and he is accredited with genius, enterprise, tact, taste, and every other good quality, both of head and heart. Nature, Art, and Time are assumed to have overlaid Newcastle with their choicest gifts; and each generation, including the present, has so judiciously partaken of them as to arrive nearer and nearer to perfection, and yet to have awakened no jealousy in the rest of the world. It is not quite clear that Hotspur was a Newcastle man; but, as the early Earls of Northumberland had a town residence in the Close fronting the Tyne, it is just possible that a portion of his infancy was spent there; and we know that the *burr* in his speech, which Shakspeare makes his wife admit was a blemish, was so admired by the gallants of his day that they imitated it. And so on, downwards, through successive generations of tenants of the tall, rickety, many-paned houses of old Newcastle to those of the new town, fast supplanting them. The spire of St. Nicholas's Church is the finest in the kingdom: the Tyne produces the finest seamen in the world: the castle is the grandest specimen of Norman military genius we have. Prim, precise Camden, laying aside all heraldic formalities, cries,—"And now, near the meeting of the wall and Tyne, stands Newcastle, the glory of all the towns in this country." Parsons and White agree, in their "History, Directory, and Gazetteer of Durham and Northumberland," that "The town of Newcastle, whether considered with relation to early history, or to its present improving condition, is a highly interesting portion of the kingdom." All the local writers speak in the same terms. And now Dr. Bruce takes up the same brushes, and paints upon the same canvas with the same colours. Everything about Newcastle and its population is idealized, idolized, and dwelt upon with rapture. The commonest objects of Newcastle life are matters of the tenderest concern, the most plaintive reflections, the most touching memories. The vendors of black puddings—a north-country delicacy, composed of blood, suet, oatmeal, &c., stuffed into the intestines of a pig or sheep, with somewhat of the result of a loose, dark, untidy sausage—used most to congregate in a certain passage in Newcastle, now known as Pudding Chare. Their vicinity resounded with invitations and solicitations to purchase their wares. "A nice black pudden, man! A nice het pudden, hinnie! A nice fat pudden, smoken het, maw jewel!" "These cries," says Dr. Bruce, pathetically, "have nearly ceased: we did not know the value of them while we had them." Thus everything belonging to Newcastle is invested with, may we not say, a fictitious fascination.

Doubtless there are good men and true in "Canny Newcassel" as elsewhere,—as good and true as the merchant princes of London, or the cotton lords of Lancashire, or the iron-masters of Birmingham. Brave, brawny, big-hearted, swarthy, sinewy men we know the workers must have been whose work we came upon with pleasure, as upon an old acquaintance, not long since under Italian skies;—locomotives carrying to and fro the fame of Hawthorn and Stephenson; but we cannot allow a picture of Newcastle to be a faithful portrait if it be painted without shadows. Dr. Bruce has used no hue more sombre than neutral tint. The ghastly shadow that fell from the principal gate when one quarter of the slain Hotspur was exposed there he has suppressed. The gaunt shadows that fell

NEWCASTLE-UPON-TYNE FROM THE SOUTH; SHOWING THE CASTLE, AND THE SPIRE OF ST. NICHOLAS.

PRINTING COURT AND PRINCE'S BUILDINGS.

* "A Handbook to Newcastle-on-Tyne." Illustrated with a geological map of the district, maps of the town, and of the river Tyne, and upwards of fifty woodcuts. By the Rev. J. Collingwood Bruce, LL.D, F.S.A. London: Longman, Green, Longman, Roberts, & Green. Newcastle-upon-Tyne: Andrew Reid, Printing-court-buildings. 1863.

upon the streets in the times when the town was smitten with plague and famine, even unto death, have not been so much as outlined. There is no indication that Defoe saw Newcastle draped in very dismal attire. He wrote, "The situation of the town to the landward is exceedingly unpleasant, and the buildings very close and old, standing on the declivity of two exceedingly high hills, which together with the smoke of the coals makes it not the pleasantest place in the world to live in." Nor any suggestion of the broad shadow that fell from Dr. Johnson's portly figure when he wrote to Mrs. Thrale, Aug. 12, 1773: "On Tuesday night we came hither. * * I have been taking a view of all that can be shown me, and find that all very near to nothing."

Apart from this amiable weakness, so cordially shared in, and probably admired, by all his fellow townsmen, Dr. Bruce's handbook has a genuine value. It reads, as he says in his preface he intended that it should read, much like the pleasant, chatty, suggestive, explanatory gossip of a person well acquainted with the history of a town, who is showing it to a stranger. It is, perhaps, owing to the circumstance of his having assumed in his own mind that his reader is a personal friend on a visit to himself that he has not made mention of the present hotels and inns. The first practical use a traveller generally makes of a handbook is to see what accommodation there is in the town or city in question for sojourners, so that he may decide by its assistance at which house he will put up. In this matter Reid's Handbook, good as it is, is no guide. But as the illustrated advertisements occupy nearly a fourth of the volume, this omission can be, to some extent, repaired by looking through them. A more important objection might be taken to the fact that there is no suggestion that Newcastle has placed herself under the banner of the fine arts, and boasts a school of design: for this elevating influence is at least worthy of acknowledgment. Speaking of the once clean and tidy condition of the houses in notorious Sandgate (without hinting at their present perilous unsanitary state), our genial author sentimentally cites the verse that was often to be seen on the showy teapots with which the wives of their sea-going residents ornamented their mantel-shelves:—

> "My heart is fix'd, it cannot range:
> I love my choice too well to change."

He might have added that at the present day similar indications of the ebb of art in Newcastle may be seen on pudgy milk-jugs and squat sugar-basins, inscribed respectively, amidst a profusion of flourishes, "Be canny with the milk," "Be canny with the sugar." We are assuredly not expecting too much when we look to the school of design to disseminate at least an appreciation of beauty of form in ceramic wares; and its establishment in a town where much earthenware is made should be esteemed one of the principal events tending towards the general civilizing feeling for art that has taken place of late years. And we must also point out as an omission that can be repaired in future editions, that there is no list of the great manufacturing and chemical works which the courtesy of their proprietors permits strangers to see.

After a few preliminaries respecting the situation, size, and style, extent of the population, and revenue of the town, we are conducted straightway to the Castle. We turn over the pages in search of a plan of the structure, that will enable us to understand the references in the text, without success: there is an old view of the Black Gateway taken before the houses were removed from against it, six or seven years ago; and small cuts of the audience-chamber, the king's chamber, the gallery, the commandant's chamber, and the dungeon; but no plan. The absence of this information as well as of any architectural description will be felt as a draw-back by those who visit the fabric for its architectural interest. The keep is of late Norman workmanship and of a quadrangular plan, covering an area of 66 feet by 76 feet, having projections at each angle. Two of these projections are rectangular and two of them are polygonal: there are also flat buttresses running to the full height of the keep between each angle. With the exception of a modern doorway it retains much of its integrity up to the parapets, which are mock Edwardian. The window openings are characteristically small and few. The curtain wall is destroyed: it covered an area of three acres and a quarter. There is an Edwardian gate tower, that known as the Black Gate, still standing, though isolated from its original surroundings: it has had extra stories built upon it in the Jacobean era.*

Leland tells us that the strength and magnificence of the walls of Newcastle exceeded those of every city in England and of most of the towns in Europe. They were built, Camden says, in the reign of Edward I., after a very rich burgher had been captured and carried off by the Scots from the middle of the town. He ransomed himself by the payment of a round sum of money, and immediately began to take precautions that the same circumstance should not recur. He was assisted by the rest of the townsmen, who desisted not till they had encompassed themselves with stout walls. It was on these walls that the residents found it expedient to keep a watch of a hundred men in 1402. Our author indicates the out-of-the-way corners where we may find portions of them still standing. Seven of the ancient towers may be counted, one of which has, however, suffered much from adaptations. The ancient bridge over the Tyne had a hermitage upon it as well as a chapel dedicated to the Virgin, and three gateway towers. This was destroyed by a flood in 1771. Another ancient chapel, that belonging to the hospital of St. Thomas à Beckett, stood until 1830, when it was removed.

There are three ancient churches in Newcastle. As the lantern spire of St. Nicholas is acknowledged to be a masterpiece of design and construction, we may pardon the justifiable pride with which it is represented seven times in the illustrations. There were four ancient churches; but in 1786 the Newcastle worthies, sharing in the dearth of archæological feeling then prevailing over the whole kingdom, resolved to replace the thirteenth-century All Saints' Church by the mock Grecian edifice now standing on its site. They filled it with solid mahogany pews, surmounted it incongruously with a spire, and paid 27,000*l.* for their bargain. They left one relic of the contents of the old fabric. This is the monumental brass that covered the tomb of Roger Thornton, the Dick Whittington of Newcastle, and his wife. The said Roger is traditionally reported to have walked into Newcastle.

> "With a hap, and a halfpenny, and a lambskin,"

and with these slender materials to have laid the foundation of the princely fortune he ultimately acquired. If the handsome brass had not been preserved his name would not have faded from recollection, for it is associated with the ancient charities of the town. He founded the *Maison de Dieu*, now replaced by the Guildhall.

In the Guildhall in question, built by Robert Trollop, circa 1658, are preserved the plate of the corporation and the regalia. The silver-gilt mace bears the date 1687. There was also a curious relic preserved here, which has now been removed to the new office of the town's treasurer. We allude to the strong box, or hutch (*huche*), in which the money belonging to the Corporation was deposited. This recalls the days when a miser made his chest his couch. It is furnished with eight locks, the keys of which were kept by the mayor and seven chamberlains, and could therefore be only opened by their unanimous consent. Another curiosity of old time preserved here has been placed in the museum in the castle. This is a framework of iron, with a spike attached to it, made to be slipped over the head of a scold. When it is securely fastened behind, the spike is forced into the mouth, and thus prevents further tirade. The name by which this instrument was known was the branks.

The Mansion House is of about the same date as the Guildhall. It was built in 1691. It is now used as a timber warehouse.

Although the formation of new streets has caused the destruction of several of the ancient residences of the North-country gentry,—among them, Anderson Place, where Charles I. lodged when a prisoner in the town,—there are still some picturesque remains of domestic architecture to be seen in the streets. On the Sandhill is a four-storied house, believed to have been the town mansion of Lord Derwentwater. There is a more modern romance attached to it. The whole front of the house consists of four tiers of lattices, only divided from one another by pilasters; but one of the lattices has a blue pane inserted in it. This is to distinguish the window from which Miss Surtees eloped with Mr. John Scott, afterwards chancellor of England. The ground-floor is occupied as a shop; but the upper part of the house retains its oak panellings and carvings of seventeenth century workmanship: it is used as the offices of Messrs. Belton, Williams, & Co. In Love-lane stands a house, once occupied by Mr. William Scott, the father of the Lords Stowell and Eldon, where the latter are supposed to have spent their youthful days. This is likewise occupied as offices by Messrs. Ridley & Thompson. The house in which Mark Akenside was born has been rebuilt; but side by side with the ordinary three-storied straight-lined brick house now occupying its site is a two-storied overhanging tenement, the upper rooms of which are approached by an outside stair, which is a *fac simile* of that in which the poet first saw the light. The house in which Lord Collingwood was born is standing in the Side: it is built of brick, in last century workmanship. John Wesley built an orphan-house in Northumberland-street, which has been recently removed, to make room for new school-rooms. There were, too, in recollection, several ancient hostelries in Pilgrim-street—the route pilgrims took to the chapel at Jesmond, and perhaps to the scene of St. Cuthbert's miracles at Lindisfarne; but these have been likewise modernized. It is somewhat remarkable that ancient Newcastle was built of timber, like old London, notwithstanding the abundance of stone in the immediate neighbourhood. Only three ancient stone houses are known to have existed.

Modern Newcastle, in the first days of its extension, was built of brick. But in 1823 Mr. John Baird built two new houses of stone, Nos. 37 and 39, Northumberland-street, respectively; and Picton House was built about the same time of polished stone by Mr. Todd. From this period the principal buildings and houses in the streets of Newcastle have been built or faced with stone. All the new streets built by the late Mr. Grainger are fronted with stone. Of the million pounds worth of property constructed by this indefatigable man, we have often given particulars. We may add that the whole of it is now occupied, and in a fair way of making a remunerative return for the enormous outlay. The most recent addition to the attractions of modern Newcastle is the Stephenson monument, which has been likewise described in these pages. The new townhall buildings are now completed. The estimated cost of the whole was 17,000*l.*: the actual cost amounted, it is understood, to 50,000*l.* Three new groups of buildings have replaced the property damaged in the great fire, called the Merchants' Offices, the Queen's buildings, and the Prince's buildings. They very much improve the appearance of the quay side. Another new building, since our survey of the town, is a large printing and stationery establishment, built on the site of the old Nag's Head Inn. These are the premises of Mr. Reid, the publisher of the "Handbook," and of "Reid's Railway Guide." The ground-floor is occupied as a shop: above this are three stories, and above them two mansard roofs, containing two attics, one above the other in each. The lower attics are lighted by two dormers apiece, the upper by one. Eight vanes rise from the metal crestings of the mansards. We give a view of this creditable building: Mr. Wardle was the architect.

We transfer to our pages several other of the engravings with which Mr. Reid has liberally adorned his book.

A third of the volume is devoted to the industrial resources of Newcastle and its neighbourhood. In this chapter, which is ably written by the mayor of Newcastle, is condensed the information that, diluted by many hands, was afforded to the members of the British Association at the recent congress. Mr. J. T. Bell appears to have diligently collected every fact and figure appertaining to the mines, manufactures, collieries, and trade of the district, and, first refining them, placed them under the compressing power of a most ponderous steam hammer. We have, in very limited space, a compact and digested account of the rise and progress of the commerce of Newcastle. He gives the first place to coal. Few persons would suppose that so much water as coal is lifted from a coal-pit. For every ton of coal raised to the bank as much water must be pumped up. In many cases, seven or eight times the weight of water is raised more than of coal; and in one or two instances its weight is thirty times that of the coal. This causes a great expenditure in pumping machinery, as well as furnishes the source of many an accident. A second cause of expense and casualties is the highly inflammable air pent up in crevices of the strata, known as fire-damp. Mr. Bell relates a case of explosion that came within his own experience. On the occasion in question, he estimated that there was no more inflammable air present than could be di

* A good view of the Castle will be found in one of our early volumes.

filled from 1½ cwt. of coal, or consumed in a day by eight or ten argand burners; and yet it caused the death of more than twenty men and boys, some of whom were killed at a distance of half a mile from the scene by the mere concussion of the air; and damage was done to the mine to an extent of 10,000*l.* The combustion of fire-damp on a larger scale, with the gases resulting from the combustion, produce a series of casualties that cast a deep shadow over this useful branch of commerce. And, unfortunately, the influx of water and inroad of gas are not the only cause of peril. What with the fall of stone in the workings, accidents in travelling up and down the shafts, and other untoward circumstances not to be classified, such as the cause of the Hartley calamity, it is estimated that for every 100,000 tons of coal worked a life is lost. Mr. Bell reports well of the workers whose industry and courage are so essential to our comfort. Although, perhaps, less educated than Newcastle mechanics, they have gladly availed themselves of the means of improvement placed within their reach by the Wesleyans, who have established Sunday-schools and chapels in many pit villages, and are as prudent as their fellow-labourers in other branches of employment. About 80,000 men are employed in and about the collieries of this great northern coalfield, which, up to this date, is estimated to have yielded a thousand million tons of coal. The men employed in superintending and conducting the various operations are, locally, classed as viewers, under-viewers, overmen, keepers, wastemen, hewers, putters, barrowmen, cranemen, drivers, trappers, shifters, onsetters, banksmen, brakesmen, gin-drivers, corvers, wallers, and screeners, — names which indicate the numerous branches into which the processes are divided. Touching the question of the exhaustion of supply, our author foreshadows an intervening calamity, namely, a great increase in the cost of extracting it, which will put as effectual a barrier of its general use as its exhaustion.

Gas, coke, lamp-black, asphalte, patent fuel, crude naphtha, and light and heavy oil, or creosote, besides essences of delicate flavour used in confectionery, are among the irreconcileable articles into which coal and its accessories are converted upon the banks of the Tyne. Iron is placed at the head of the next section, metallurgy; and a history of the development of the mode of treating the ore from the days of the Romans to the adoption of the Cleveland ironstone at Middlesborough is entered into. Although we have recently given the details of the wonderful extension of commerce resulting from this circumstance at the last-mentioned place, we may be permitted to add a few particulars relating to the Newcastle branches of the iron trade. Messrs. Hawthorn have reduced the manufacture of locomotives so completely to a matter of routine that they can engage to turn out an engine every week. This firm employs about 1,100 men. R. Stephenson & Co. employ about 2,000 men. The manufacture of railway wheels of malleable iron, started by the late Mr. William Losh, at Walker, is still carried on. Marine engines are made in great number on the Tyne. Steam-hammers, iron bridges, boilers, railway waggons and trucks, and cables, are among the miscellaneous articles piled up by Mr. Bell as being manufactured by Messrs. Hawks, Crawshay, & Sons. Sir William Armstrong, who, besides his numerous ordnance improvements, was the first to apply hydraulic power to cranes, employs about 4,000 men at his engine and ordnance works at Elswick.

About 3,000 tons of steel only are annually produced in this district. This trade is so nearly engrossed by Sheffield, that not more than 300 persons gain a livelihood by it here. The Messrs. Spencer & Sons, at Newburn, possess the most extensive of the Tyneside Steel-works. They have six converting and thirty-six melting furnaces.

Lead and silver mining and manufacture is a much larger item in the industry of the north country than the production of steel. The Alston Moor and Weardale districts yield about 20,000 tons of lead per annum. Alston Moor formed part of the possessions of the unfortunate Earl of Derwentwater. The Commissioners of Greenwich Hospital are the present owners of it. They do not speculate in the mining operations, but grant leases, in which royalties are agreed to, varying from 1-7th to 1-10th of the produce of the mines. There is something like Californian risk attending lead mining operations. Sometimes a miner may, by a lucky chance, make as much as 300*l.* in a year: at others he can scarcely reckon upon 25*l.*; for he shares in the chance of the quantity yielded. As some time elapses before the produce of the mine is washed up and the yield ascertained, an instalment of 10*s.* per week is paid per man. At the end of the year a balance is struck, and the surplus is paid or the shortcoming demanded. This uncertain subsistence is eked out by the small plot of ground of which nearly every miner employed by Mr. W. B. Beaumont, M.P., the largest lessee, now enjoys the use. The quantity of silver found in a ton of lead varies from the merest trace to 30 oz. or 40 oz. Mr. Bell relates that the method at present employed to extract the silver from the lead was devised by the late Mr. Hugh Lee Pattinson, of Alston, who at one time filled the office of Assay Master to the Commissioners of Greenwich Hospital. He observed that when lead was melted in a crucible and stirred with an iron rod, particles of the metal in a semi-crystalline condition fell to the bottom, while the remainder continued fluid for some time longer; and he concluded that the two portions would vary in the amount of silver they contained. They were assayed, and the result proved his inferences. The lead that crystallised first left the silver behind, squeezed out, as it were, from the less valuable metal during congelation. The crystals, still containing some silver, are melted again and again, till there is not more than an ounce left in a ton of metal; while the rich lead is subjected to the process over and over again till it contains 200 oz. of silver to the ton. Thus far the Pattinson process. The two metals are ultimately separated by converting the lead into litharge. The gain of the new process consists in the difference between refining lead containing 10 oz. to the ton or the same weight containing 200 oz. or 300 oz. As much as 1,000 tons of lead would be dissipated into vapour out of every 18,000 tons refined by the old process, a waste which is now very materially lessened. Newcastle enjoys the privilege of an assay-office. The Goldsmiths' Company appoint an assay-master, who assays and marks silver plate.

Lead is rolled into sheets by Messrs. Locke, Blackett, & Co., at St. Anthony's; and likewise manufactured into shot by the same firm as well as by Messrs. Walkers, Parkers, & Co. The same firms also produce large quantities of gas and water pipes. Red lead, white lead, and a substitute for the latter,—an oxichloride of lead,—are among the minor manufactures from the same metal, carried on by various firms. About 800 tons of zinc are produced annually at Hartley Burn by Mr. Atwood, who was induced to undertake its manufacture from the circumstance of the lead mines yielding a mineral known by the name of black-jack, which is a sulphuret of zinc.

Some pounds of the new metal, thallium, prepared at the Washington Chemical Works, were exhibited to the members of the British Association. Mr. Bell devotes a paragraph to it in the "Handbook." He states, impartially, that its discovery is due to Mr. Crookes, of London. This gentleman was investigating the properties of different substances by what is termed spectrum analysis, in which different bodies affect the prismatic spectrum in different ways. "A specimen of material from which selenium has been obtained, was placed in the apparatus, and a well-defined green line appeared, which Mr. Crookes ascertained to be due to a new metal he named thallium, from a Greek word signifying a green twig. So delicate is this test that 1-250 millionth of a grain can be detected in the spectroscope. Mr. C. next tried a substance which partly sublimes, and is partly carried away mechanically from the furnace in which pyrites is calcined in the soda works, and in it he discovered from one to two per cent. of this hitherto very rare metal." The newest metal before this discovery,—aluminium, is successfully manufactured at the same works by Messrs. Bell, Brothers. They deem it yet in its first stage of infancy, and capable of extended application.

Three thousand five hundred men only are employed in iron ship building on the Tyne. About 3,000 or 4,000 tons of iron wire are annually converted into ropes; and about 2,000 tons of hemp are spun into ropes in the district; the principal ropemakers on the Tyne being Messrs. T. & W. Smith, Crawhall & Co., and Henry Webster. 2,500 tons of anchors are annually manufactured at the Newcastle anchor forges.

Among the chemical products soda stands first: bleaching powder is the next on the list: this is followed by bicarbonate of soda, better known as baking powder. Something like 10,000 tons of this new article of request among housewives are now furnished by Newcastle annually. Forty years ago an order came into the town for two pounds of it, which quantity could only be obtained by uniting the stocks of three shops. Oxichloride of lead, magnesia, pearl hardening, hyposulphite of soda, cement, alum, copperas, Venetian red, prussiate of potash, Epsom salts, chemical manures, sulphate of ammonia, acetate of lime, soap, and grease, are all manufactured on the Tyne.

Another highly important item in the trade of this busy place is glass. In 1615, Sir Robert Mansell established himself at Newcastle as a glassmaker. In 1838, out of the 120 tons of window-glass produced weekly in the kingdom, 60 tons were made on the Tyne, and 20 tons on the Wear. The works of the Messrs. Swinbourne & Co., at South Shields, and those of Messrs. Hartley, at Sunderland, have proved formidable opponents to the Newcastle glass trade, which is chiefly now confined to bottle making. The "Handbook" gives a considerable amount of statistical information concerning the glass trade, which has been furnished by Alderman Hartley and Mr. R. W. Swinbourne. It appears Belgium is able to undersel the north country manufacturers on the item of light-cut wine-glasses: these can be imported for 1*s.* 4*d.* a dozen, a price at which the local makers are totally unable to produce them. The stained glass-works of Mr. Wailes employ from eighty to one hundred persons.

The raw materials of which earthenware is made, being brought in large quantities to Newcastle, led to the establishment of potteries for the coarser kinds of ware. From information afforded by Mr. C. T. Maling, it is shown that 1,200 men are employed in this branch of industry. They are distributed in thirteen potteries. There are 12,000 tons of white clay, 3,000 tons of brown clay, and 34,000 tons of coal used annually in these. Plates are made in large quantities. One house received an order for as many as 12,000 dozen at a time.

Tobacco-pipes are made in immense quantities in small potteries exclusively employed in that manufacture. Fire-bricks are made at the rate of 80,000,000 per annum. Mr. Richard Coil manufactures, at Gateshead, about 250 tons of bricks a day. The process is so rapid that a week after the clay has been removed from its natural bed, it may be found forming a part of the walls of the houses which are springing up around.

No whalers now leave the port of Newcastle. Their errand is superseded by three oil-mills on the Tyne, which consume annually 25,000 quarters of seed. There are also two larger steam flour-mills in the Close.

The manufacture of tobacco employs 200 men, besides steam power. From 120 to 130 men are occupied in the weaving of canvas: 500 are engaged in the converting of hare and rabbit skins into felt, and subsequently into hats. In Messrs. Wilson's establishment the fur of 1,500 hares and rabbits is stripped off every week by rapidly revolving knives. A fan blast blows the fibres into two groups,—the one of coarse hair, the other of fine. These are propelled through a second tube in which there is a cone of thin copper, pierced with small holes, and revolving with great rapidity. A fan revolving at the rate of 3,500 times a minute draws the air quickly from the interior of the cone, and a current is created which makes the light fur adhere to its surface. In a very short time sufficient fur has accumulated to form the felt. Wool is also felted; and both kinds of felt are fashioned into hats, waterproofed and dyed. About 300,000 lb. of paper is made in the district. Newcastle also tans the skins of seals, sheep, and calves in great quantities; and coach building is now employing some 300 or 400 men.

The resources of the vicinity are further revealed to us in the description of the banks of the Tyne to its source; and in a chapter on the Tyne as a port. We are reminded, too, of the neighbourhood of Alnwick and Warkworth Castles.

In a word, Newcastle, as shown in Reid's Handbook, is a picture of quaint old-world beauty set in the radiance of a most wonderful commercial prosperity;—not a blot, flaw, or shadow upon it; much less any need of sanitary reform. But in reality it still stands in crying want of the improvements we have from time to time indicated as imperatively called for.

An Ancient Bell.—An interesting archæological discovery, it is said, has just been made at Ornolac, near Usat-les-Bains (Ariége). On taking down a bell to make certain repairs in the steeple of the church, it was found to bear the date of 1079, and must consequently be one of the oldest bells in Christendom. This needs confirmation: dates are often misread.

NEWCASTLE-UPON-TYNE.

THE RAILWAY STATION, AND THE NEW STEPHENSON MONUMENT.

THE TWO BRIDGES.

THE SOCIAL SCIENCE CONGRESS.

The meeting in Edinburgh has passed off very successfully, and will doubtless bring about good, though the good comes slowly. The daily papers have reported pretty fully the proceedings, including Lord Brougham's lengthy address in full. We content ourselves with a few detached reports of papers and discussions connected with the public health question. At the commencement of the proceedings,

A paper was read by Miss Nightingale titled "*How People may Live and not Die in India.*" The Royal Commission on the sanitary state of the army in India had shown that unless the health of the British army in India could be improved, and the enormous death-rate reduced, this country would never be able to hold India with a British army. The average death-rate of the troops serving in India was no less than 69 per 1,000 per annum. That death-rate, moreover, did not include those who were invalided and who died on the voyage to England, or soon after their return; but taking it simply as it was, and assuming the strength of the British army at 73,000, it proved that such an army would lose on an average of years an entire brigade of 5,037 men per annum: sometimes it would be half that number, but in other years it would lose two such brigades. The Royal Commission had shown that if the death-rate were reduced to even 20 per 1,000 per annum (which is too high)—this was double that of home stations since these stations had improved—to India would be saved a tax equal to 1,000*l.* sterling. And this represented the mere cost of replacing the men cut off by excess of premature and preventible mortality. Referring next to the question how this great death-rate in India had arisen, Miss Nightingale said,—I am afraid that the reply must be that British civilization is insular and local, and that it takes small account of how the world goes on out of its small island. The diseases from which the soldier mainly suffers there are miasmatic: now, intemperance never produced miasmatic diseases yet. They are foul-air diseases, and foul water diseases, fevers, dysenteries, and so on. Intemperance may cause liver diseases, and put the man into a state of health which prevents him from resisting miasmatic causes. What are these causes? We have not far to look. The Briton leaves his national civilization behind him, and brings his personal vices with him. At home there have been great improvements everywhere in agriculture and in town drainage, and in providing plentiful and pure water supplies. There is nothing of the kind in India. There is no drainage either in town or country. There is not a single station drained. If such a state of things existed at home, we should know that we have fevers, cholera, and epidemics to expect. But hitherto no one has expected anything of the kind from these same causes in India, although they are

THE VOTIVE CHURCH, VIENNA.—Herr Heinrich Ferstel, Architect.* [* See p. 734, *ante*.

always happening. As regards water, there is certainly not a single barracks which is supplied, in our sense of the term, at all. There are neither water-pipes nor drain-pipes. Water is to be had either from tanks into which all the filth of the neighbouring surface is washed by the rain, or from shallow wells dug in unwholesome or doubtful soil. So simple a piece of mechanism as a pump is unknown. The evidence showed that all that the climate required was that men should adapt their social habits and customs to it—as, indeed, they must do to the requirements of every climate under heaven; be particularly careful to have a plentiful supply of pure water laid on for every purpose; drain all dwellings; have no cess-pits; attend rigidly to cleansing, not only surface-cleansing; never crowd large numbers into the same room; build separate barrack-rooms instead of large barracks; place these so that the air plays freely round them; raise them above the ground, with a current of air beneath; never build in a wet hollow nor on a sludgy river bank, which would be avoided even at home. Do these things, and the climate may be left to take care of itself. But, if we would make India about as healthy as England, only somewhat hotter, let us have improved agriculture and agricultural drainage. If all these improvements were carried out, the normal death rate of the British soldier would be not 69 per 1,000, but 10 per 1,000, say the Commissioners. But it is not for the soldier alone we speak. The report has a much deeper meaning and intent than this—it aims at nothing less than to bring European civilisation and appliances to the natives of India. Such revelations are made, especially in the reports from the stations, with regard to the sanitary condition of these, as to be almost incredible. Everywhere they are suffering from epidemic diseases, fevers, dysentery, cholera—constant epidemics we may call them, and constant high death-rates. (How high can never be known, because there is no registration.) The plague and pestilence are the ordinary state of things. But the extraordinary is when these sweep over large tracts, gathering strength in their course to pass over gigantic mountain ranges, and to spread ravages over Western Asia and Europe. And all this might be saved. We know the curses of epidemic outbreaks here. Take the worst condition of the moist and most neglected districts at home: multiply it ten and a hundred times over—and that is, to say the least of it, the normal condition of every city and town in India. Not one city or town is drained. Domestic filth round the people's houses beggars description. Water supply is from wells or tanks in ground saturated with filth. No domestic conveniences. Every spare plot of ground is therefore in a condition defying us to mention it further. The air in, and for some distance around, native towns is as foul as sewer air, there being no sanitary administration and no sanitary police. Here, then, we have, upon a gigantic scale, the very conditions which universally precede epidemics at home. India is the focus of epidemics. Where should we be now, with all our schools, if London were like Calcutta, Madras, or Bombay, the three seats of government in India? The next great work, then, is sanitary reform in India. There is not a town which does not want water supply, draining, paving, cleansing, healthy plans for arranging and constructing buildings, together with agricultural drainage and improved cultivation all round. These things the people cannot do for themselves. But the Indian Government can do them. Three health departments (one for each of the presidencies) have been recommended by the royal commission, together with a home commission to help these departments in bringing the appliances of home civilisation to India. The work is urgent. Every day it is left undone adds its quota of inefficiency to the British army, and its thousands of deaths to the native population. The question is no less a one than this—How to create a Public Health Department for India—how to bring a higher civilisation into India. What a work, what a noble task for an Indian government! No "inglorious period of our dominion" that, but a most glorious one! That would be creating India anew, for God places His own power, His own life-giving laws, in the hands of man. He permits man to create mankind by these laws, even as He permits man to destroy mankind by neglect of these laws.

Additional interest was given to the reading by the presence of Prince Alfred, who arrived at the commencement of the proceedings of the department. In the discussion which followed,

Mr. Chadwick said that in the presence of his Royal Highness, and the special attention given to the topic before them, the section would see an assurance of the regard paid to the subject, so important to the welfare of the people. He (Mr. Chadwick) would state that if all landowners paid the same attention to the sanitary condition of their labourers, or to the condition of their cottages, the general mortality, even of rural labourers, would be reduced by nearly one-half. It was frequently put forth, as defensive of the army mortality, that disease was a necessary consequence, and an inevitable one, from massing men together in barracks. But they were massed more closely together in ships, and in ships in the Royal navy, where some sanitary care was taken, the death-rate was less than one-half that prevalent in barracks. On the home stations the death-rates were six and seven in 1,000, whilst in the barracks the death-rate was seventeen in 1,000. In the Royal navy, however, there was yet much to be done, especially for the improvement of the ventilation between decks.

Mr. Rawlinson thought that if similar measures were adopted in India to those which had been adopted elsewhere with regard to the army, there was no doubt that they might expect the results predicted by Miss Nightingale. They remembered the fearful mortality which occurred in the army which left our shores for the Crimea—a mortality which had no parallel in our history, which even exceeded that of the Walcheren expedition. That mortality was attributed to the climate and to certain other things, to the want of roads, to excessive trench duty, to great exposure to the weather, &c.; nevertheless, owing to the exertions made in the camp, the mortality in the Crimean army during the last eighteen months of the campaign was reduced to a less rate than that army had ever enjoyed in its barracks at home. Since that time great improvements had been made in our barracks at home, and in their sanitary condition, and the rate of mortality had in consequence been reduced from 17½ to 8½ per 1,000. If the same thing were done in India, if better barracks were erected, better sites chosen, and the spirit ration abolished, he believed, humanly speaking, they might place the British army in India, now nearly 80,000 strong, in such a position that, in place of its mortality rising up to 60 and 70 per 1,000 it would not exceed 20 per 1,000.

On another occasion, Dr. Stevenson Macadam read a paper on "The Contamination of Water by Imperfect Drainage in Towns and Villages."

In the discussion which followed, Professor Gairdner, Glasgow; Provost Whitelaw, Dunfermline; Rev. Mr. Farquharson, Selkirk; and Dr. Mackenzie, Kelso, bore testimony to the great benefits which had arisen from Provost Lindsay's Police Act.

Professor Bennett thought people were apt to confound offensive smells and impure water. He had a strong idea that smells did no harm, and it had not been proved that smells arising from drainage had the slightest effect on our health; at all events, not to produce ill-health.

Mr. Elliott, Carlisle, maintained that fresh sewage did not injure water, and stated that fish had increased in the Eden, notwithstanding the introduction of sewage, which, he held, afforded food for the finny tribe.

Dr. Alexander Wood expressed great surprise at what Professor Bennett had stated, and gave it as his opinion that in the majority of cases where a bad smell existed it was an indication given by the Almighty that something was wrong which required to be put right. He begged, in the name of most medical men, to protest against the doctrine that pure water was of more importance than pure air, and he would beg all gentlemen who were interested in that measure not to wait until the extraordinary problem of the utilization of sewage was solved, but to go forward and benefit the living generation.

Mr. Elliott read a paper on "*Domestic and Hospital Ventilation.*" A discussion took place on this subject, in which there took part Professor Gamgee; Mr. Heywood; Mr. John Casse, London; Dr. Spence; Mr. Lundy, Leith; Mr. Mawson, Newcastle; and Mr. Stephenson, Edinburgh. Hints were thrown out by the speakers as to the ventilation of public and private buildings. In any room where people live, it was properly urged that there should be an unceasing current of air passing through the apartment. Reference was also made to the evils arising from confined bed-closets, as well as windows which did not open from the top.

In a paper read by Mr. Kelman on *Co-operation* in Germany, he stated that at the end of last year there were 900 co-operative societies in Germany, possessing a paid-up capital of 300,000*l.*, with a borrowed capital of 1,200,000*l.*, making a working capital of one and a half million, and doing an annual business to the amount of 4,500,000*l.* Of the 900 societies, 600 were loan and credit societies, 200 were for raw materials, bazaars, &c., and 100 co-operative stores. He gave an explanation of the system in its varied branches.

For the meeting of working men the largest building in Edinburgh proved wholly inadequate to accommodate the thousands who were desirous of being present. The applications for tickets were about 35,000 in number, and not more than a tenth of the applicants could gain admission.

At this meeting M. Garnier Pages spoke in French, and was interpreted sentence by sentence. He said,—I do not know a more solemn sight than that of a free man coming before such a great assemblage as this, and speaking some words to it with a free heart. I will speak to you as a free man, and I will speak the words of truth. It is evident that of all sovereignties the first one is the sovereignty of the nation; and it is not less evident that this sovereignty must be exercised with science and with all the gifts of intelligence. You have all of you rights, and you are free to exercise these rights. But I take the liberty to tell you that, if you are possessed of rights, you have also useful and special duties to fulfil. The first duty is, as the noble Lord Brougham has well said, to try, every one of you, to get all the information and all the knowledge which you require to have. When you see men here of all sorts and ranks—men of every description associating themselves for the purpose of studying science, the duty of every one of you should be seen to be, to try to profit by these efforts which are being put forth in this direction. When the representatives of the working classes of Paris came to London, they were received as brothers; and I am sure that, if the representatives of Paris were to come to Edinburgh, they would be received in the same kind and affectionate manner. We must consider that there are other nations who at this moment are suffering, but I feel certain that you have great sympathy for these nations. When there is suffering on the earth, when there are miseries in the world, it should be your wish that there should arise in both countries,—in England and in France,—a spirit of concord, and of determination to help the nations that suffer.

The Sanitary Arrangements of Edinburgh as compared with other large Towns.—Dr. Littlejohn read a paper on the above subject, in which he advocated the daily removal of the solid and other refuse of houses. In no town in England, London not excepted, was this system carried out. In Scotland it was only adopted in a very few towns. The plan adopted in Edinburgh was to compel the inhabitants to carry down their solid and other refuse to the streets or courts in buckets or other suitable vessels, under a penalty of 40s. This refuse was removed by the authorities, sixty carts being employed in the service. The removal was superintended by an inspector of cleaning, assisted by a large staff of scavengers. There were 57,000 tons of solid refuse removed from the streets of the city every year. This was sold to the farmers in the vicinity within a radius of twenty miles of the city, and realized 7,000*l.* per annum to the revenue of the city. In comparison with other manures, such as guano, bone, &c., it was invaluable, as it was much cheaper, and was besides practically inexhaustible. Dr. Littlejohn said that in Liverpool not a single copper went to the funds of the city from the sale of its manure. To be effectual, the cleansing of large towns should not be left to private enterprise. It must be left to the authorities, who had ample means of accomplishing the work. As the drainage of London and Leicester was carried out, a large amount of money was wasted and entirely lost.

Dr. Andrew Wood said he had been a medical practitioner in the city for thirty years, and should know a little about its sanitary condition. The question of the sanitary state of large towns was a large and important one. There were some people who maintained that there was no harm in a bad smell—that it, in fact, had a fattening effect. He was against everything that had a bad smell, because wherever there was a bad smell there was something wrong. Wherever there was a bad smell there must be lurking most deleterious substances calculated to produce disease. He then detailed a case of fever which came under his notice in one of the best squares in the new town. There was nothing in that fashionable house to lead one to suspect what had caused the disease. First one and then six of that family fell ill, and then he made an examination, the result of which was, that a cesspool was found under the house which had not been cleaned for years.

He knew houses in the city where human beings lived where they would not put their pig; where a lighted candle was necessary at midday to see the inmates. Body and soul were here contaminated. Pure air, the light of heaven, a plentiful supply of water, and good drainage were what the working-classes required.

Mr. Ker Porter said he had been engaged in constructing houses in Ireland, and in Huntingdonshire in England, and he found that by introducing a flue rising from the ceiling to the top of the houses was a great boon to the health of the inmates. During the visitation of fever in these places, the inmates of the houses thus ventilated entirely escaped its ravages.

Mr. Newlands, Liverpool, said he was no advocate of the "midden" system of Lancashire, but it was better than no drainage at all, as was the case in parts of Edinburgh. He said that it cost Liverpool 13,000*l.* annually for cleaning, from which they never derived any benefit.

Mr. Girle said that in the course of time water would be introduced into every house in Edinburgh, and especially those of the poorer classes. He maintained that two out of three houses in the old town of Edinburgh had sufficient room to be supplied with water and water-closets.

The Laws of Property, and the Dwellings of the Working Classes.—Mr. Thomas Hare read a paper on "The Difficulties which the Laws of Property oppose to the Improvement of the Dwellings of the Working Classes." He said he should nominally confine himself in his paper to the subject of the dwellings of the working classes in London, which he had had most opportunities of examining, and in which, from its vast population, the necessity of providing better habitations presented itself in every form; but he might add that there was very little in what he should say which would not apply to any populous city. He had proposed for the Department of Jurisprudence a draft of a proposed law, having four main objects;—First, to facilitate the work of obtaining sites for the erection of buildings greatly more capacious than at present; secondly, to provide for the erection of these buildings, in larger and smaller tenements, so as to be within the reach of all classes, especially the poorer; thirdly, to regulate by by-laws, adopted by the proprietors themselves, the relations of each to the rest for the common maintenance and good condition of the whole property, and the prevention of anything which might interfere with its enjoyment; fourthly, for a cheap system of local registration of titles, so that tenements might be transferred from one owner to another without deeds, readily and inexpensively, thus making it not only an investment of the highest moral and domestic value, but one in which earnings might as conveniently be placed as in a savings bank. The proposed law was adapted, as he conceived, to remove the present legal and almost insurmountable difficulties in the way of this greatest and fundamental step in the moral progress of the masses of the people. He had framed the Act for London only, but a dozen words would extend it to any other locality.

Public Inspectors for Rural Cottages.—Dr. Begg read a paper on "The Necessity of Appointing Public Inspectors for Rural Cottages." The case of rural cottages, he said, differed widely from that of the houses of workmen in cities. The workmen in the country were entirely at the mercy of servants and landlords; and, unless good cottages were provided for them, they could not obtain them by any efforts of their own. It was admitted that a certain number of good cottages had already been erected in different districts; but in many districts little or nothing had been done in improving the dwellings of the rural labourers. Even where the houses of the farmers had been immensely improved, and the most splendid steadings for the accommodation of cattle had been erected, the lodgings of the ploughmen were often disgraceful. It was beyond a doubt that to this cause,—the miserable accommodation of rural labourers,—must mainly be traced much of the immorality which prevailed in certain rural districts. In his opinion the time had come when the community, on the ground of humanity and in self-defence, should bring the matter to a point. One way to accomplish this result effectually would probably be to appoint authorized and paid public inspectors to examine all the cottages in the rural districts, and to report to some magistrate, who should have the authority to order the redress of existing evils.

IS TASTE AN EXPENSIVE INDULGENCE?

In a recent Parliamentary debate it was stated by a high personage, "that the indulgence of taste proved very expensive," and this caused some merriment from those who unthinkingly concurred.

But it may be well, in these days of art museums, of schools of design, and of truthful work, to consider briefly whether this is borne out by facts, and whether it be not something besides taste that costs so much. This abused quality seems in places to be quite misunderstood; and it appears to be thought that taste and extravagance are synonymous terms; an exercise of the one being carried out only by an unlimited supply of the other.

Now, as the subject under discussion was a matter of building, it will be right to consider it with reference to that, in the first place.

Buildings cost more or less as they are large or small, substantially constructed, or otherwise, and if plain or enriched; and herein lie so many points of taste.

The value of a building is computed, not merely from its original cost, but from its substantial condition, or otherwise, after some years of wear and tear, and is raised or reduced accordingly. So the taste of the person who builds is exercised, in the first instance, by having it well or ill built, and taking measures accordingly, by the employment or not of proper advisers in the matter, and paying an adequate amount for the work.

It is exercised again by the condition of the design, by its beauty or faultiness, and its fitness for the proposed erection, for its consistency and unity.

Further, it is exercised by the elaborations in the form of structural and superposed decorations which are intended to give *éclat* to the whole thing.

Now, be it observed, that the design, the structure, and its decorations form three points of necessity: we must have all three to make one building complete; and unless true taste be exercised in every part, and under all circumstances, it will prove to be a very dear building indeed. If badly designed, ill built, and vilely "decorated," it will be a perpetual discomfort, and entail an endless expense in repair, alterations, and improvement; while, if taste have been exercised, it will form almost a sacred protection to it, and elicit expressions of continuous enjoyment and satisfaction, while outlay for improvement will not be needed at all.

If we look to the old buildings, both sacred and secular, which now rear their heads amongst us, perhaps not so complete and entire as when first erected, but in which, if there be only ruin or the mutilation left by the fanatic, there will yet be perceptible the presence of taste,—of regard for consistency and the elements of beauty and strength of which the present day is more regardful. And these remains,—these bold, plain stones and oaken rafters, parts of the structural necessity itself,—would not have cost less had they been shaped in any other way, which would have equally suited the purpose of their position and use; and the moulded edges, sculptured bosses, and enriched details which meet the eye at every turn, they are joys for ever as things of true beauty, which no doubt delighted those in whose generation they were built, and now serve as examples and guides in this distant day of their existence; when, if left only to time, many of them would have still retained much of their original freshness and perfection. But the hand of man has been laid on with violence, thus hastening their disruption and ruin. Thus the point of substantiality is vindicated; and it may here be asked, How many of our present buildings will last 500, 300, or 200 years? Do contracts, competitions, and speculation aid the cause of really cheap and effectual building? This may be well doubted, seeing the method of construction in ordinary use in the present day.

On the other hand, some really fine structures have been and are in course of rearing which will do honour to their projectors now and for many years hence, from the simple reason that, having exercised in them the threefold taste, all will honour them; and indeed every one feels, from reasons perhaps which he cannot explain, that he is bound to give his assistance in upholding such desirable works, which, perhaps, have afforded him only a gratification of the eye in passing.

But if, on the contrary, an outrage be perpetrated upon even ordinary taste, its removal and destruction are univerally acquiesced in.

Taste in building may be said to be the most perfect adaptation of the means to the end; the best expenditure of money for a certain purpose; an eye to the whole before the work is commenced; and a rigid attention to the execution of the work during its progress.

Taste does not consist in extravagant outlay for an insignificant purpose; in covering up bad work with a tinsel clothing; or bedizening a structure with an elaborate superficial ornation to the neglect of important structural conditions.

If a building be required for a palpably small sum, there are of course certain matters and purposes to be provided for, as in the most costly edifices;—strengths here, piers and voids there, as is usual. It is in the artistic disposition of these and other necessary matters that the "taste" will consist and evince itself. And it is well known that when a form has to be many times multiplied, that very fact reduces the cost of its production very considerably; so that "things of beauty" may meet the eye even for small sums, and so render the parts and the whole of our large building tasteful in an eminent degree without being expensive. But if, on the other hand, something very egregious be attempted at one part to the sacrifice of others of equal importance, which are left crude in consequence of the cost of one monstrosity, then taste is not displayed. It is mere expenditure without satisfactory result or return.

Taste is even more shown in a consistent plainness altogether than in an ornate group with accessories of the barest and commonest character surrounding it, serving to make the bare appear worse, and the ornate ridiculous.

In another case, however, there may be a worthy object to be attained, and an adequate sum wherewith to accomplish it. Here the exercise of taste has another phase: all substantial parts are sure to be provided for, and then the enriched portions will have the attention and require the exercise of suitable taste. For, however meagre or elaborate adornments may be, they must accord with the general purpose and style of the building, and serve to enhance its beauty.

Taste will first be exhibited in the fitness of the structure, and then in the enrichment, as it were, of that fitness; and an outlay for this is entirely legitimate when it can be well afforded.

There can be no question, and it should be well remembered, that the first cost is the cheapest, and is the best investment of money in building.

Low-cost building is a great bane. There is quite a thirst amongst a certain class for big buildings for little sums; and, alas! contractors are found who favour this mania by tendering and showing themselves a good deal lower than angels by undertaking to erect them; the small figures in the tender frequently swelling into large ones in the balance-sheet of bankruptcy,—a conclusion unsatisfactory to the builder, and not likely to lead to pleasant reflections in the possessor of such underpaid magnificence.

Taste, again, is shown in proper pay for good work; but in its most popular sense, it may be taken to mean—show, appearance, decoration, spending a large sum of money; and here, for "taste," might certainly be read "extravagance." True taste, however, is generally profitable, like all good things, and its appreciation grows larger day by day.

Turn we from the actual building to its adornments,—those articles of *vertu*, fine pictures, peculiar china, glass, or metalwork, the life-like statuary,—those things which etherealize an earthly tenement to those who have an appreciative taste. True, each and every one of these may have cost a large sum of money; but it does not require much research to discover that the purchase of such things is a very excellent investment. They are as good, or better than gold, as their value for the most part increases with years; and if a collection of a well-known judge be to be sold, what a rush do we find to the auction-room! what eagerness at the biddings, what premiums are paid upon the original cost, and what handsome sums do we find realized almost daily by their disposal in this manner! What a fine legacy a few dusty bronzes, antique cups, or some small squares of canvas may turn out to be, if converted into cash, as many persons can testify?

Therefore, an indulgence in taste in the higher arts is not expensive when the word is misread as wasteful and useless; but is the acquirement of valuable "portable property" and heir-looms, which gladden the eye while they profit the pocket, an outlay which, for the most part, returns

to the possessor in a few years with adequate money interest, if so desired.

And surely, apart from profit, even the gratification of the eye with objects of true taste is no small matter, but one which should be allowed some scope: although it is not at all admitted that a tasteful building or article need cost more money, or so much, as one utterly devoid of taste and consistency, where real extravagance is developed and allowed to run riot, either in unscientific construction, defective stylar characteristics, in meretricious decoration, or in impurity of form and inconvenience of arrangement.

A display of real taste is frequently a negative exhibition, the simplicity of outline and purity of form being amply sufficient to delight the senses; as "beauty unadorned" is beauty still, untrammelled by excrescent addenda, which deform while they add to the cost; the composition possessing a *bizarre* appearance wherein beauty is hidden; and consequently no rest or satisfaction is afforded to the eye.

The adornment of perfect beauty, then, is waste; and if a building or work of art is to be profusely decorated, it should only be judged when completed, when its clothing, robes, and jewels are set about it. Before this it is a mere carcase, a framework to receive that which is to constitute its chief excellence, to make it presentable to the eye of taste by beauty of figure.

The skeleton of the human form divine may possess all the structural elements necessary to the various uses to which it is to be applied, but it is in the muscular development and surface-carving that we discern the finished beauty which is acceptable to the general eye, which is now getting very critical and wakeful in art matters. It therefore behoves those having the appointment of placing objects before it so truly to study the form, proportion, and uses before doing so, that they shall exhibit a superior order of knowledge of taste in their works, so as to be truly leaders, and not pretenders, who do much harm and are blind guides.

An exercise of taste proper may, therefore, be fearlessly indulged in by those who understand it and are well advised, whether it be in a building or in its fittings, in works of art, or in any matter of composition where the educated eye is to be consulted in connexion with the cost.

True form is one great item, and simple forms are mostly tasteful: much mischief is done by overloading with decoration: the *ensemble* is not pleasing, it may strike the eye by its pomposity, its many parts and colours may bewilder, but of repose there is none. It is trickiness from ground to roof, from end to end; patchy, gaudy, but oh! so costly, so much labour and material consumed; the only satisfaction being that it did cost so much, which is a common answer of many persons.

Meretricious design must be one of two things;—exceedingly paltry, from its bareness and impurity, its inartistic form and arrangement; or very gaudy, from the defective form being required to be wrought over with something very glaring, to take off the attention, and cover the multitude of sins underlying the coat of many shapes and colours; appealing to a sense of vulgar importance without innate or inherent modest intrinsic merit of any kind. While taste, on the contrary, may be known to impart true and lasting pleasure at the least possible sacrifice of money value. Beautiful objects may be produced, or a building may be erected having a high standard of excellence. The secret of this, however, may lie in its simplicity, entirety, and fitness, without extraneous parasitical ornation. It is the whole truth and nothing but the truth, which no one can gainsay, but it may cause exclamation,—How could there be so much excellence for so little money? Why, indeed? Because tasteful judgment had been exercised from beginning to end.

Therefore it may be fearlessly asserted that an indulgence in taste is not a wasteful expenditure of cash, but a source of true and refined pleasure. A general cultivation of this, too, is a national advantage; encouraging, as it does, a higher class of artisans, and elevating the ideas of the people generally, not only in matters of art, but in every branch of social economy; all catching gleams of the sunshine of refinement, by which dark places of ignorance are lighted up, showing them in all their tawdry hideousness, and leading to their abandonment, in favour of ways and pursuits resulting from better information, of which there is still plenty of need, and for which there is ample scope without fear of over-education.

An indulgence in true taste, therefore, may be said to be a safe investment of capital.

THOMAS GOODCHILD.

THE BETHNAL-GREEN "BLOOD-POISONING" CASES.

In a fair and well-toned article, the *Lancet* questions the correctness of the "so-called blood-poisoning;" but admits the existence of "malignant scarlet fever;" and states that, on personal examination, the writer had found the state of the locality to be "simply infamous." Nevertheless, he thinks that "the outbreak and malignancy of scarlet fever are not so clearly linked with *insanitary* conditions that we may venture to dogmatize upon the relation of the one to the other." But surely the writer cannot believe that there is no evidence of the close and causal connexion between the malignancy of the disease, whatever he may call it, and the infamousness of the locality. And besides, doctors so differ amongst themselves on this very point, that their opinions neutralize each other; and the sanitary public may, we think, be excused, under such circumstances, and in what we may fairly call the absence of any *positive* or *unneutralized* medical evidence or dictum on the subject, if they form an opinion of their own as to the essential connexion between the abominable, disgusting, infamous state of the locality on the one hand, and the malignancy of the disease there generated on the other. As for the medical, and really after all merely technical, objection to the term "blood-poisoning," we had anticipated this in a note to what we said last week on the subject of the Bethnal-green inquests; and we must now repeat, that even were the medical profession unanimous, which they are not, in opinion that these were not, strictly speaking, such cases as they have heretofore known as blood-poisoning; "a popular and sanitary use has been made of the word, which is not now likely to give way to any mere professional restriction of meaning." And again we say, if tarry and unclotting blood be not poisoned blood, what is it? All fevered blood must be poisoned blood, in a sanitary and popular sense, even were nothing but *infection* from some diseased human being the actual cause. What is the "buffy coat" of fevered blood, as it used to be, and is probably still, called amongst the faculty, if it be not poisoned blood? The old sangradoes must have had some such idea of it when they bled the patients so mercilessly in order to get rid of it, little heeding that they were at the same time pouring out the remanent life's blood which alone could cope with its deadly influence.

When Dr. Moore, the medical attendant on the patients, called the disease blood-poisoning, surely he knew well enough what scarlet fever, and even malignant scarlet fever, was; as did also Dr. Powell, when he gave evidence in one of the cases (all of which, be it noted, the *Lancet* maintains—just as we had ourselves urged last week—were doubtless essentially of one and the same nature) that *it* was a case of blood-poisoning; only he differed from Dr. Moore inasmuch as he attributed this case to poisoning from kidney disease.

We fear that the doubts expressed by the *Lancet* may unintentionally mislead the public into the erroneous idea that the disease not being strictly and professionally speaking what it has been called, the insanitary state of the locality can have nothing to do with it, and may therefore be allowed to continue as before without any ostensible, serious, or fatal influence being attributable to it. This we feel assured the able writer is far from meaning, whatever side of the moot question of the connexion of filth with malignant scarlet fever he might happen to take. And if the infamously foul state of the locality *do* produce any fatal influence, how does that influence manifest itself, if not in the malignancy of the very disease, by whatever name we characterize it, which prevails in such a locality? Doubtless want, and also infection, may contribute to the propagation of the disease, but no one—certainly not the *Lancet* writer—alleges that the state of the place has *nothing* to do with the fatality of the disease. And fearful as is such a disease, whether we call it malignant scarlet fever, or blood poisoning, *or both*, a still more horrible form of disease prevails in this very locality,—a loathsome disease of the skin,—a new disease, far worse than the ancient leprosy it must be, considering the not only unsightly but most unsavoury nature of it,—an odour which itself betrays its but too close connexion with the emanations from that unclean animal the sow, which so abounds in Bethnal Green. That the blood is poisoned, even were it from this source alone, is it reasonable in such a case to doubt?

The faculty would do well to consider whether, with all their modern enlightenment, they have not departed somewhat too far from the "humoural pathology," as it has been called, of past time. Medical men, of old, really did regard the blood as the life; impurity or poisoning of the blood as the main cause of disease; and purity of blood as the grand sanitary agent which swept away all, or nearly all, forms of disease. If the modern faculty still entertain the same opinions, they do not manifest these opinions, we suspect, as they ought to do, and as a sincere belief in them would impel them on all occasions to do.

WATER SUPPLY IN BETHNAL GREEN.

The expense of coroners' inquests in this neglected parish must be considerable, for scarcely a day passes without finding in the public prints some account of a necessary and often important inquiry. One of the most recent inquests in this district, has been held in Half Nichol-street, respecting the death of a child who had died of cramp. On this occasion Mr. Leach, of Church-street, a lodging-house keeper, and one of the jury, said, that a great deal of disease and filth arose from the fact that there was no adequate supply of water. It was laid on even in districts composed of densely crowded houses for only twenty minutes in the twenty-four hours, and on Sundays there was none. On Sundays poor people might be seen running about with pails in their hands, begging everywhere for water, which was not to be had. The water-rate was 2*l.* a-year, and the landlords were unwilling to complain or ask for more water lest the rate should be increased.

The water companies supplying the district are the East London and the New River company. Mr. Massinghan, the parish surgeon, said that he could testify to the fact that disease was actually generated by the filth consequent on the bad water supply. Only that afternoon he had sent two persons to the Fever Hospital, whose illness, in his opinion, had been originated by want of cleanliness,—entirely by that cause. The coroner, Mr. H. Raffles Walthew, said that the want of water was a very serious danger to the health of the community, and he hoped that the public attention would be directed to the matter. It would be in vain to hope that any real improvement in the state of the district could be made until so important a means of procuring cleanliness and health was placed within the reach of the inhabitants.

For many years past we have directed attention to this great neglect, which cannot be so much charged to the water companies,—although it is clear that we need a cheaper supply of this necessary in the metropolis,—as to the parties who have the letting of the poorer kind of property, and the parish inspectors, who should not allow houses to be occupied unless a sufficient supply of water be provided for each house. As matters are managed at present, it is often the case that ten, twelve, fifteen houses, each room of which is crowded by people, have often only the supply which runs from one small pipe for from a quarter of an hour to twenty minutes,—seldom more. In courts and squares, there is for all the multitude barely enough for the supply of one house occupied by an ordinary family; and our readers know that this source of mischief exists in many districts besides Bethnal-green. In one court we lately counted upwards of 250 men, women, and children, who were supplied in the way above mentioned by a single pipe. It cannot be said that the rental paid by the tenants of these dwellings is insufficient to meet this expense of water supply, for even the small, miserable houses of four rooms in the worst state of repair pay a rental of about 8*s.* or 9*s.* a week—a sum more than enough to pay for water and other things needful. The day may not be far distant when the whole of our great population will have cause to regret the neglect of these matters. It is important that the parish inspectors should be men above reproach, possessed of a large amount of general and some scientific knowledge. The present rate of payment for these important functionaries is not sufficient to procure the right description of men, who in poor and crowded districts are of as much consequence in the preservation of life as the medical officers are. What dependence is to be placed on some of them was shown in our last. If owners will pay them better to overlook than the parish pay them for looking over, the result is not wonderful.

DEAL PUBLIC ROOMS, COMPETITION.—The plans of Mr. Thomas Hillyer, of Ryde, Isle of Wight, architect, submitted for competition for building public rooms at Deal, in reply to advertisement in the *Builder*, have been selected.

THE MEMORIAL STATUE OF THE PRINCE CONSORT AT ABERDEEN.

The inauguration of the memorial statue of his Royal Highness the late Prince Consort took place at Aberdeen on the 13th, in presence of her Majesty and various members of the Royal Family. The statue, which was subscribed for by the city and county of Aberdeen, is of bronze, by Baron Marochetti. It is placed upon a polished granite pedestal, and represents the Prince seated, and wearing a field marshal's uniform, with the robe of the thistle over it: in one hand he holds a roll, and in the other the field marshal's hat. Previously to the uncovering of the statue, Mr. Anderson, provost of the city, presented an address from the committee of subscribers to the statue; to which the Queen, through Sir G. Grey, returned a reply. After the address and reply, the Queen was pleased to confer the honour of knighthood upon the Lord Provost, thenceforth Sir Alexander Anderson.

INAUGURATION OF THE PRINCE CONSORT'S STATUE AT GUERNSEY.

On Thursday, the 8th of October, the memorial to the Prince Consort was inaugurated by Major-General Sir M. J. Slade, Bart., Lieut.-Governor of Guernsey, who was assisted by the authorities of the island, and surrounded by spectators numbering from 10,000 to 15,000. The day was held as a high holiday, with processions, decorations, &c. The statue is an electro-deposit, 10 feet in height, from Mr. Durham's model, prepared for the Memorial of the Great Exhibition of 1851, now in the Horticultural Gardens, at Kensington. The copy has been electro-deposited by Messrs. Elkington, of London. A view of the statue appeared in the *Builder* of June 6, 1863. The pedestal of the Guernsey memorial, however, differs, being merely a granite pedestal, beautifully worked, from the Cheesewring quarries, from which a part of the granite employed in the 1851 Memorial was had. It appears that, though it be excellent for macadamisation, Guernsey granite becomes spotted after some time; as, for instance, on the slabs marking the spot where the Queen landed on her visiting Guernsey some years ago. The *Comet* gives the following description of the pedestal:—"It consists of a step and landing, upon which are two courses of granite, rusticated. Upon these rest the plinth and a deep moulded base, the latter supporting the shaft, which is surmounted with a moulded capital. The statue crowns the whole." The entire height of statue and pedestal is about 27 feet.

The statue is erected in St. Peter's Port Harbour, and is visible from the sea. The staging which was put up to accommodate the people was erected by Mr. John de Putron, builder, who also had put up 120 poles, decorated with flags, along the quays. The bailiff of Guernsey (Mr. P. S. Carey) said, on the Governor presenting him with the statue on behalf of the community,—"The ceremony .... forms an era in the annals of our island, not only as disclosing to our view a work of art above all praise of mine, but, more than that, as recording to future generations the feelings of which that glorious work is the manifestation and the symbol. .... And never let it be forgotten, that when the respect of mankind is paid to one who is so truly worthy of it as the Prince whose noble presence stands before us, the honour that is done to him redounds to the credit of those who have shown themselves capable of appreciating his merit."

The statue itself cost 900 guineas, and the estimate for the pedestal was 200*l*.

ARCHITECTURAL SOCIETIES.

Liverpool.—The first meeting of the sixteenth session, on the 7th instant, was presided over by Mr. W. H. Weightman. Mr. Kilpin, after stating that death had recently been very busy in thinning the ranks of their profession, referred to an article in the *Athenæum*, attributing to Mr. Cockerell the honour of being the architect of St. George's Hall. They all knew, however, that the sole merit of the design and execution of the building was due to Mr. Elmes alone, and that Mr. Cockerell had nothing to do with it except finishing the interior. As they all wished to be remembered by their deeds, he considered it an act of injustice to Mr. Elmes that this most erroneous statement should have gone forth to the public. These observations appeared to meet with general sympathy. The President then delivered the annual address, and in his concluding observations referred to the necessity for further improvements in the dwellings of the poor, and to the widening of streets in the various localities in the town. Mr. Hay having proposed a vote of thanks to the President, the meeting broke up.

Bristol.—The first meeting this season of the Society of Architects was held on the 7th instant, at the Fine Arts Academy. Mr. Gabriel read a paper "On the Pantheon," which was illustrated by a model brought from Rome by Mr. Palmer, and presented by him to the Academy of Fine Arts. A discussion ensued as to whether the rotunda and portico of the building were of the same date.

Worcester.—The annual meeting of the Worcester Diocesan Architectural Society has been held in the council-room of the Natural History Society. The report, which was read by Mr. J. Severn Walker, stated that while the committee were unable to report any considerable accession of new members, they had to deplore the loss by death of two of its original supporters—Earl Beauchamp, one of its vice-presidents, and the Rev. J. H. Wilding, a member of the committee from the formation of the society. The annual volumes of reports and papers for 1861 and 1862 have been distributed amongst the members. They contain numerous contributions of interest, by the Rev. E. Trollope and other well-known writers upon architectural and archæological subjects. A review of architectural works in the district was also given in the report; after the reading of which the members and their friends proceeded on an excursion to Colwall, Coddington, Bosbury, and Ledbury. The weather was fine, and the company numerous. When at Colwall, the party were photographed by Mr. Downes, of Malvern, who also took the church and adjoining manor-house. The company, after inspecting all the interesting objects in the neighbourhood, adjourned to the rectory, where they were heartily welcomed and entertained at luncheon by the rector, the Rev. Mr. Custance, and his lady. The party then returned to Worcester, after having passed a pleasant day.

DISSENTING AND ROMAN CATHOLIC CHURCH-BUILDING NEWS.

Turnham-green.—The first stone has been laid, by the Rev. Dr. Manning, of a new Roman Catholic church at Turnham-green. The church is to be in the Gothic style, and will contain about 600 persons. The architects are Messrs. Willson & Nicholas.

Lacock (*Wilts*).—A new Wesleyan chapel has lately been opened here for divine service. It is situate near the wharf, and the foundation-stone was laid in May last. The chapel is in the Gothic style, with porch entrance, and was designed by Mr. John Gale, of this place, by whom, in conjunction with Mr. James Long, of Bradford-on-Avon (who executed the mason's, tiler's, and plasterer's work), the building has been erected. The dimensions are 32 feet by 22 feet inside, affording accommodation for about 160 persons. The cost, including deep foundations, vestry, boundary-walls, iron railing, brass fittings for lighting, window-blinds, &c., has been rather over 500*l*. The site was given by a gentleman of the neighbourhood, who also contributed towards the cost of the building.

Hulme.—The foundation-stone of a new Presbyterian chapel, with schools to be attached, specially intended for the English-speaking descendants of Welsh Presbyterians residing in the district, has been laid on a plot of ground fronting to Upper Medlock-street and Booth-street, Hulme. The proposed building will be in the Italian style. The frontage to Upper Medlock-street will be 40 feet, and to Booth-street, 65 feet. The school and vestries will be underneath the chapel. The entrance to the school will be in Booth-street, and to the chapel, in Upper Medlock-street. It is proposed to accommodate 400 persons in the chapel, and a similar number of children in the schools. The estimated cost of the building and fittings is 1,500*l*., the whole of which will be defrayed by subscription. The contractor is Mr. Mitchell, of Greenheys.

Bradford.—The new Horton-lane Congregational Chapel, Bradford, Yorkshire, has been opened for divine service. It is in the Elizabethan style of architecture; but the details are principally Italian. The new building is situate in Horton-lane, above the old chapel, and immediately below the new school, the chapel and school together being of an L form, with the lower part of the letter, which represents the school, reversed. The pulpit is of Caen stone, and is the gift of Mr. George Salt, of Saltaire. The organ has been entirely remodelled and refitted under the management of Messrs. Sagar & Radcliffe, of Leeds. To the right and left of the organ are the minister's and deacons' vestries. The ceiling, which rises at least 45 feet above the floor of the area, is of plaster, moulded to correspond with the rest of the building. In the chapel there is accommodation for about 1,300 persons, allowing 20 inches to each individual, of which number 730 sittings are on the ground floor. The chapel and school have cost together nearly 11,000*l*. Towards this 8,000*l*. has been raised. The architects are Messrs. Lockwood & Mawson, and the clerk of the works, Mr. John Morpeth.

Sheffield.—The foundation-stone of a new edifice to be called Broom Park Congregational Church has been laid at Sheffield. The site of the chapel adjoins Newbould road, which runs along the west side of Wesley College grounds from Clarkehouse road to Glossop road. The building will only be large enough to accommodate 300 persons, but it is to be so constructed as to form the nave of a much larger chapel to be hereafter erected. It will be in the Gothic style of architecture, with a gable to the front. There will be a large window in the gable, and under the window a projecting parapetted porch, with two doors forming the entrance to the chapel. There will be four two-light windows, on each side, with buttresses dividing the nave into bays. The windows are to be ornamented with tracery. The roof is to be boarded; the outside slating to be in patterns. The seats will be of red deal, varnished. The complete design comprises a tower in front and vestry and transepts at the back. Mr. C. Innocent is the architect; and Mr. B. Carr contracted for the mason's work; Mr. W. Gibson for the woodwork; Mr. Staniforth for the slating; Mr. G. Taylor for plastering; Mr. Bissett for plumbing and glazing; and Mr. Puttrell for painting.

Hexham.—The corner-stone of a new United Presbyterian Church has been laid at Hexham. The edifice is in the Gothic style of architecture, from a design by Mr. Thomas Oliver, of Newcastle-on-Tyne, architect. The material is stone. The ground floor will accommodate 365 persons, and provision has been made for future enlargement by the addition of an end gallery. The sittings are open benches of commodious size. The building will be heated by a Gill stove, and will be ventilated in conjunction with both the heating and artificial lighting. The roof is on a span, ceiled about two-thirds from the apex, for the purpose of ventilation. At the rear of the church are a school-room and vestry. The contractors are—for the mason's and slater's work, Mr. Bulman; carpenter's and joiner's work, Mr. Snowball; plasterer's work, Mr. Olive; ironwork, Messrs. Pattinson, Davison, & Spence; and plumber's work, Mr. Wilson, all of Hexham. Mr. John Ridley is the local superintendent of the works.

FEVER IN BELFAST.

The want of water so much complained of and to which we more than once alluded in the course of the past summer, is now, combined with filth and want of drainage, producing its dreaded fruits of such a state of things. Fever has got into the town; and not among the poorer classes only, but in the more respectable localities, where there have been two, three, and four fever cases in a single house. In one row, only one house was exempt. In many instances the fever is of a mild typhoidal type, but cases of malignant fever are spoken of. A correspondent of the *News Letter*, who points attention to the horrible state of the Friar's-bush graveyard, where holes 12 feet deep, are filled with coffins packed one close above another, to within 12 inches of the surface! The wind for some time had been blowing, he says, from the south-west; and, in the north-east part of the town, near the Botanic Gardens, fever has been marked as prevalent and malignant. The state of this graveyard was pointed out some years ago by the press, but the abomination is still permitted. There are many streets, of four and five years' standing, undrained; and festering cesspools prevail in some parts of the town. There are also pestiferous marshes called the Bog meadows, near the town. The water is still defective in quantity, except the Lagan water, which is believed to have injured the health of the town from its bad quality. The engine-power of the waterworks also seems to be insufficient.

CHICHESTER CATHEDRAL.

Your correspondent, "Ecclesiasticus," mentions Chichester Cathedral as "among the choicest examples of successful restoration." I am afraid this well-meant commendation may lead your readers to think that the works are complete. It is true that the roofs and gables of the transept have been rebuilt; that the arches of the crossing have been turned; and that the woodwork provided by the Chandler Memorial Fund is ready, but we still require 12,000*l.* to complete the spire, without which the effect of the building would be wholly marred on the exterior. Any help of the laity who may feel inclined to follow the example of their forefathers, and assist the dean and chapter in their earnest endeavours, by providing the lacking funds, would be gratefully received by them. Smaller or the smallest sums contributed by those either unable to give much, or unwilling to have their names known, may be sent to me, at 64, Ebury-street, S.W., and I would thankfully acknowledge the gift (if you give me permission) in your columns.

Mackenzie E. C. Walcott,
Precentor of Chichester.

HOLBORN VALLEY, AND IMPROVEMENT OF THAT NEIGHBOURHOOD.

Being well acquainted with London, and having resided some years in Hatton-garden, close to the scene of daily—I may almost say hourly—accidents, I feel particularly interested in the improvement of that untoward or vexatious incline; which is constantly painful to the horse, the driver, and the observer. Now, only now, the Corporation of London seem inclined to do something in this matter; and publicly advertise for "Designs, with descriptions, plans, sections, and estimates" for this important work; to be prepared and delivered within the inconsistently short time of about three weeks. This is so evidently unreasonable, that I refrain from commenting upon it, in any way whatever. Living, as I have already said, in the adjoining district, and having no occupation, I have deliberately, carefully, and thoroughly examined the site and neighbourhood, with the five-shilling plan of the locality in my hand. In making such alterations and improvements in, and adjacent to, Holborn-hill and Skinner-street, "as may conduce to the convenience of the public, and to the accommodation of the metropolitan traffic," great care must be taken, in attaining the principal object, not to destroy or deteriorate the value of adjoining property, more than is absolutely necessary. While examining the neighbourhood of Holborn-hill and Skinner-street in one direction, and Farringdon-street running north and south in the other direction, it seems quite evident that no plan should interfere with, or obstruct the present main thoroughfares: there must always be a good wide roadway, communicating with Farringdon-street from east and west; therefore, it appears advisable that Holborn-hill, Skinner-street, and Farringdon-street, north and south, should remain unaltered, in order that the traffic to and from the lower street, may not be more inconvenienced than at present: hence the household property, as we now find it, will not be materially decreased in value by the alterations now under consideration.

The author proposes to form an entire new street, about the width of Hatton-garden, commencing westerly at the corner of Fetter-lane and Holborn, crossing Bartlett's-buildings and Thavie's Inn; not interfering with St. Andrew's-court; over the burial-ground south of St. Andrew's Church on arches; no other buildings on the churchyard; the school-house to be taken down, and arches to carry the new road erected in its place; crossing Shoe-lane on an arch, close to Messrs. Pontifex & Wood's premises; across Farringdon-street on three arches, a large one for carriages, and two smaller ones for foot-passengers, continuing towards the Old Bailey opposite Newgate-street; altogether a distance of about 500 yards. The greatest depth beneath a straight line, from Fetter-lane to Old Bailey, is, in Farringdon-street, about 25 feet.

The merest glance at the before-named vicinity, or ever so hasty a visit to the line proposed, must satisfy those who are acquainted with such class of buildings, that, with few exceptions, the houses and their inhabitants between Fetter-lane and Bartlett's-buildings, also those between Shoe-lane and Old Bailey, are of the very lowest order; narrow courts and passages, in many cases without a thoroughfare, inhabited by a numerous population, generally with a family in each room. Under these circumstances, it would be difficult to find such a site, which, as at present, is almost worthless, surrounded by many valuable business streets; and, as regards sanitary matters, it would be doing good service to the community, by altering so crowded and thereby unhealthy a locality; at the same time dispersing the inmates, and inducing them to settle in a more wholesome part of the town.

By making an entirely new, wide, level roadway, communicating, at both ends, with a long-established trading thoroughfare, in the heart of the mercantile world, namely, Holborn to the west, and Newgate-street to the east, the ground on each side will, in all probability, be readily taken at a profitable ground-rent, for the purpose of erecting buildings with offices, or first-class shops. The formation of this proposed elevated way will tend considerably to lessen the confusion, which is so inconvenient, in consequence of the crossing both ways at Holborn-valley, recently much increased by the great traffic to and from the Underground Railway.

The following is an approximate estimate of the cost, exclusive of building the houses:—

Extreme length 500 yards, by about 60 yards wide, of freehold ground and buildings, at per lineal yard ..... £400 [This item would average about 1,400*l.* for a moderate-sized house and the freehold ground belonging to the same.]	£200,000
Getting rid of old buildings, clearing ground, &c., &c., at per lineal yard £20	10,000
500 yards in length, by 20 yards in breadth, and averaging 5 yards in height, of arches, masonry, use of implements, &c., total 50,000 cubic yards, at per yard ..... 30s. [This mode of valuation is something after the manner that architects and builders arrive at a rough estimate, by cubing the outside dimensions of an edifice, and valuing it according to the class of workmanship, at from 6*d.* to 18.s., or 1s. 2d., per foot cube.]	75,000
	£285,000
Professional services at 5 per cent.....	14,250
	£299,250
Contingencies ...	20,000
Total	£319,250

C. H. Smith.

HOLBORN VALLEY.

To Mr. Turner's list of projects for the Holborn Valley you can add the following:—One by the late J. A. Galloway, civil engineer, and Mr. W. M. Higgins, architect, for a viaduct, 30 feet in width, in the centre of the road from Hatton-garden to the Saracen's Head, the road made the uniform width of 80 feet; another by the late Charles Pearson and J. B. Stevens, architect, who pulled down the whole of the houses included in the space between Ludgate-hill and Clerkenwell green, Cow cross-street, and Shoe-lane; one by the late J. B. Papworth; another by Mr Marsh Nelson—a viaduct from Hatton-garden to Clerkenwell-green; and last but not least, one by Mr. Bunning, the present City architect. Most of these plans can be seen in the library at the Fine Art Museum, South Kensington.

R.

A GREAT FACT IN COMPETITION.

Sir,—It is a fact no less sad than true that, in nineteen out of twenty cases of public competition, the result is—*mirabile dictu!*—the success of "our fellow townsman." The decision of the Cheltenham Parish Church Competition Committee is another instance of these *strange coincidences*. Certainly, no one will blame Mr. C. H. Cooke for being successful, but the thirty-two unsuccessful competitors will draw their own conclusions on learning from the *Cheltenham Examiner* the connexions of that gentleman with the town.

Subscriber.

EASTBOURNE.

EPIDEMIC ATTRIBUTABLE TO BAD DRAINAGE.

Sir,—As no publication has been more earnest or more successful in directing attention to the great national subject of public drainage than the *Builder*, I solicit permission to offer a few brief remarks in reference to the epidemic now unhappily so prevalent in Eastbourne. It is very natural to assume, and very probable, that the scarlet fever was in the first instance introduced into Eastbourne by some of the many invalids who resort thither for the re-establishment of their health; but there must have been other predisposing agencies at work to have aggravated and spread the malady; and amongst them bad and imperfect drainage must be regarded as the principal.

To the westward of Eastbourne, near the hill upon which the martello tower stands, and in close proximity to the site selected for the new Cavendish Hotel, is a pond of considerable size filled up with putrid matter, now being partially covered over by the earth taken from the excavations for the many new buildings rising so rapidly in this vicinity.

To the east of the town, in the direct rear of the new fort, and abutting upon the ground appropriated to rifle practice, are large pools of mud and stagnant water, mixed with the filth and dirt from the adjoining cottages and pig-sties.

The *old* town is most imperfectly drained, and it is questionable whether the new town is drained at all!

It is, therefore, clearly evident that the identical same causes which occasioned so much illness a short time since at Croydon, Sandgate, Southsea, and, I must add, Brighton, have this season produced at Eastbourne the same distressing result. Let the parochial authorities of Eastbourne only exert themselves in the right direction, viz.,—drain, cleanse, and purify their town, and Eastbourne will soon once more become the favourite resort of wealth and fashion. As this is the first time, and possibly may be the last, upon which I may have occasion to address you, allow me to convey to you the expression of my earnest thanks for your unremitting and philanthropic efforts to ameliorate the sanitary condition of this country, and improve the dwellings of the poor, both in town and country.

A Fugitive from Eastbourne.

KING INA'S PALACE.

Sir,—Under the above heading a letter has lately appeared in your paper, to which my attention has been directed; and being the unfortunate person whose judgment and taste, or the want of it, in the restoration of the above palace has secured for him the pillory of the press,—the material pillory being no longer one of our institutions, to the intense regret of "F. S. A.;" I may be allowed perhaps a short space in your next issue.

It is with me a cherished principle to hate and despise anonymous writing; nor would I condescend to notice the communication of "F. S. A." were it not for the purpose of daring him to lift the vizor, and show the world that he has a claim to a higher grade of being than that of the bushranger or the assassin.

If he has the courage to fling off the mask, which is only needed to shield the cheek of the coward, or the brow of the villain, I will break a lance with him on any issue he may choose to raise respecting the manner in which the restoration of "Ina's Palace" has been effected.

If he has not the courage to do this, either in your paper or any other that may be open to us, and put his name to what he has to say, I shall still have to hesitate whether to regard the "Fellow" as belonging to a "Slandering Association," or the "Society of Assassins:" most probably the latter, as he seems such an adept at stabbing in the dark: if so, he will not come out from his lurking-place to meet the combat he has provoked, nor shall I therefore be able to

> "Put but a drop of water in a spoon,
> And it shall be as all the ocean,
> Enough to stifle such a villain up."

Frome, Somerset. Joseph Chapman.

BOW COMMON.

Sir,—Taking a stroll the other day to the East end of London, I walked over Bow Common to see how matters were progressing in that quarter, and confess I felt very much grieved to notice the wretched state of things there. The Common appears everywhere to be marked out for streets; and, in some places, houses are built, but no *streets* are finished. The houses finished or building are of a very inferior description, the materials used being of bad kind. Besides, the houses are too small, and small houses run up with bad materials are always more or less deficient in sanitary arrangements.

But what I am most anxious to draw public attention to, through the columns of the *Builder*, is the fact, that no provision is made for a public park or garden. This is to be deeply regretted. The neighbourhood is densely populated,—Blackwall, Poplar, Bow, and Stepney. The people used to have athletic games on the Common before it was enclosed. Of course, that is now out of the question, the ground being cut up, bricks burning, and so on. Why should not a portion of the Common be reserved for the use of the poor people of that locality? We see some parishes now regretting having allowed all the land in their neighbourhood to be used; and, not having left any portion for a park, now obliged to seek land miles away (Finsbury, for instance); and yet we allow some rich person to close the few open places remaining, which really belong to the people, and never call out till it is too late.

However, even now two small gardens might be made, and should at once be seen after, as the other blocks have one or more houses already erected thereon. If the opportunity be allowed to pass by, future generations will have to deplore the present apathy of those whom it concerns.

West End.

PROCEEDINGS UNDER METROPOLITAN BUILDING ACT.

On the 6th, Mr. Barnett, district surveyor of Marylebone, summoned, before Mr. Mansfield, Joseph Patterson, of Hereford-street, for commencing to build without proper notice, under the 41st section of the Act. The magistrate fined him 5*l.* for neglect.

Another summons was taken out against the same builder, for erecting a washhouse with 4½-inch walls, instead of 9-inch walls. An order was made to amend within one month.

Charles Fairnington and Joseph Short, nurserymen, of Elm Tree-road, were summoned for building greenhouses with 4½-inch walls, instead of 9-inch walls. An order in each instance was made to amend within one month, with a recommendation from the magistrate for the parties to apply in the interim for the sanction of the

Metropolitan Board of Works to allow the walls to remain, expressing his regret that neither he nor the district surveyor under the Building Act had any discretion in the matter.

On the 9th, Mr. Godwin, South Islington, summoned Peter Brewster, of Howard-road, Stoke Newington, before Mr. Barker, Clerkenwell Police Court, for erecting a water-closet adjoining a house in Canonbury-road, without giving the notice required by the Act. Fined 2*l.* and expense of the summons.

Miscellanea.

Memorial of the late Prince Consort at Perth.—This memorial is to take the shape of a statue, to be executed by Mr. Brodie, sculptor, Edinburgh, and erected on the North Inch. This resolution has been carried by a majority of 30 to 9 of the subscribers, and a committee has been appointed to see the work carried out.

Street Improvement in Bradford.—The special street committee of the local council have reported as to the projected improvement of the crooked and narrow thoroughfares of the town. They propose the widening and improving of the Bowling-green end of Tyrrel-street, various similar improvements in Market-street, the extension of Brook-street, the formation of a new street between Westgate and Thornton-road, and the widening and other improvement of Kirkgate, Ivegate, and Carlisle-road.

A Putrid Well.—At a meeting of the Truro Town Commissioners, an extraordinary fact was brought to light. The Board of Commissioners had been newly elected, and the "new blood" was rather troublesome in asking questions about divers things. One of these questions was put to the surveyor under the Board, who admitted that there was a public well, or pump, in Rosewin-lane, Pydar-street, which had been used by the poor people in that populous neighbourhood for the last two years, and was found to emit such a stench that workmen now employed could not stand over its mouth. A common sewer opened into it. Complaints had been made respecting the pump two years ago, and the grievance had only recently been remedied. Such is the state of sanitary matters in the principal town in the duchy of Cornwall.

The Tyndale Memorial.—The *Bristol Daily Post* states that this structure has now attained a height of about 60 feet, but that, about 20 feet above the surface of the soil, the stone has given way, causing a long rent, which has so weakened the building that the entire structure must be taken down. Various causes are assigned as to the origin of the accident, but the most correct opinion appears to be that which attributes it to the mixture of the hard stone from Box, with the soft sandstone of the locality, causing the latter, from the immense weight, to give way under the pressure. The *Gloucester Chronicle* adds,—We regret that we must confirm the statement of our Bristol contemporary. The stones with which the column is built are too small for the purpose, and they have been put together with mortar which has no binding quality. Cracking has begun, and the tower must be taken down. In other words, the money of the subscribers, 800*l.*, which has been spent upon it, is lost. We hope, however, that this will not prove an end to the project of a Tyndale Monument.

The Earthquake as felt at Tenby.—A correspondent at Tenby, who resides on a sea-girt limestone rock whose strata show the contortions produced by former convulsions of nature, says:—"I was awakened by a feeling that I was moving with intense rapidity; then I heard a fearfully loud deep-toned noise, as if approaching, which it did rapidly, with a crashing sound, very much like near thunder muffled, if you can imagine what that would be. I felt everything shake, and I was immediately turned from my right side on which I was lying, on to my back, and then back again. I sprang up to rush to the children. The height of our house made me feel our case hopeless, for an earthquake I felt convinced it was..... You know how rapidly all this passes through the mind. The noise passed on, but the motion continued; not the same swing, but a jerking motion, as though the mighty rock on which our house is built was settling into its place. I fully expected to hear the falling of houses, and looked out of the window. A more perfect picture of peace could not be imagined. It was a lovely night, and Tenby lay asleep in a flood of moonlight—you know how beautiful. As I looked I doubted myself, but had only to close my eyes to feel the truth of the awful sound and sensation just experienced."

Lundy Granite Company.—The first ordinary meeting of this company has been held in the City, for the purpose of increasing the capital from 25,000*l.* to 100,000*l.* The whole of the capital had been subscribed by friends. The motion for increasing capital from 25,000*l.* to 100,000*l.* was carried unanimously.

Accident at Brixton.—A serious accident has happened at a large chapel for the Methodists, in course of enlargement at Brixton Hill. A large beam of timber fell, carrying with it a small portion of the roof and five poor fellows who were at work there. One of the men had to fix the beam, when it gave way, carrying him with it, fracturing his skull fatally, and injuring the others. At the inquest, it appeared that the breaking of an old tie-beam was the cause of the accident.

Female Scholarships in Art.—The Committee of Council on Education propose, with the sanction of the Treasury, to establish two scholarships, to be held by the two most eminent female students of the schools of art throughout the country; the endowment for such scholarships having been provided by the fees taken for inspecting the wedding presents of their Royal Highnesses the Prince and Princess of Wales, at South Kensington Museum, in May last.

Royal English Opera.—Mr. W. Harrison commenced his eighth season on Monday last with a new opera by Mr. Vincent Wallace, called *The Desert Flower;* and the Prince and Princess of Wales, the Prince and Princess Christian of Denmark, and the King of Greece, amongst his audience. Miss Susan Pyne, Mr. Weiss, Mr. Corri, and Mr. Harrison, sang the principal parts; Mr. Grieve had painted the scenery; and Mr. Mellon conducted; so that the opera had every chance of success, and achieved it; at any rate a *succès d'estime.* We must take another opportunity to speak more in detail.

Death of Mr. John Sheepshanks.—This gentleman died on Monday in last week at his residence in Rutland Gate: he was born in 1787. The public will know him by name as the munificent donor, in 1856, of "the Sheepshanks Gallery" of pictures at the Kensington Museum; for which noble gift, by the way, worth 60,000*l.*, and containing many of the best works of Mulready, Leslie, Landseer, and others, he might have received some honorary recompense besides mere thanks. An order of merit is much wanted in this country as a legitimate recognizance of public benefactors; but, in the case of Mr. Sheepshanks, and Mr. Vernon, the grant of such an order might have been otherwise supplied.

Important Sanitary Measure for Liverpool.—The Liverpool town council, on the recommendation of the health committee, have at length resolved to apply to Parliament for powers to purchase the courts and alleys of the borough, of the state of which we have lately spoken, in order that they may effect comprehensive improvements, and prevent, if possible, the continuance of fever and other diseases in these localities. One-fifth of the population of Liverpool at present reside in these courts and alleys, which are 3,103 in number, containing 18,610 persons, and many of which places, as lately remarked, are so ill-ventilated that fever is never absent. It is proposed to charge the cost of purchasing this property on the general rate authorized to be levied by the local sanitary Acts, the rate not to be increased beyond 1d. in the pound in any one year.

Deaths from Foul Air in a Cistern.—At Leicester, four persons have been killed by carbonic acid gas in a cistern holding grains and swill for pigs. The cistern, according to the local *Advertiser*, was 6 feet 6 inches deep, by about 2 feet by 2 feet 2 inches; and was usually covered by a lid, and descended by a ladder. The cover had not been removed at night preparatory to descent into it in the morning as usual; and a boy, who seems to have been the only sensible person in the family, refused to go down, on account of the foul air, when his master went down himself, and was suffocated. He was followed by his daughter, who was also killed; and she was followed by a young man, who met the same fate; when another young man had the folly, notwithstanding all these significant warnings, to descend also, and was suffocated like the others. How four grown persons could ever descend into a cistern of such dimensions as those described, so as to be all suffocated, while a ladder also stood inside, and grains at the bottom, it is hard to conceive. A hook and rope were at last got, and the four unfortunates were all readily got out, as the first one might have easily been in the same way, without the sacrifice of the other lives. The case is very similar to what so often happens in wells.

Railway Traffic Returns.—The traffic receipts of railways in the United Kingdom amounted, for the week ending the 26th September, on 10,882 miles, to 634,737*l.*, and for the corresponding week of last year, on 10,428 miles, to 615,801*l.*, showing an increase of 454 miles, and of 18,936*l.* in the receipts.

Brighton: the new West Pier.—At a meeting on Tuesday last, Mr. H. Moor, in the chair, it was resolved to extend this company's capital from 20,000*l.* to 25,000*l.* The result will be that the new pier will be 40 feet wide instead of 10 feet 6 inches, as at present. The work is to be delivered, perfect, in twelve months from the time the contract is taken.

Water for Leeds.—The Leeds Town Council has been discussing the water supply of the borough, and has approved contracts with Mr. A. M. Child for brickwork, and with Messrs. J. Butler & Co. for cast-iron girders and tie-rods to be used in covering over Woodhouse Moor reservoir, at a cost of 5,863*l.* 13*s.* 7*d.* It will be twelve months before the additional engine get to work which was being put down at Arthington, and then the daily supply to Leeds will be 7,500,000 gallons. The waterworks committee will then be able to cheapen the price of water a little.

St. Bartholomew's Hospital, Chatham.—The Hospital erected by means of Gundulph and Watts's gifts has been opened. It is not of an ornate character outwardly, but is described in the local *News* as well adapted inwardly to the restoration of health. The wards are spacious, light, and airy, and fitted with iron bedsteads. The plastering of the walls is non-absorbent. The western wing is devoted to lock patients. The laundries have all the modern improvements for washing, wringing, drying, and mangling clothes. The hospital was erected from designs by Mr. R. P. Pope, of London, architect. Mr. A. Stump, of Brompton, was the contractor; and Mr. Richards, clerk of the works.

TENDERS.

For converting the Three Kings, in the city of Wells, into a grocer's shop and premises, for Mr. Way. Mr. G. Tompkins, surveyor.

Beaven	£246 0 0
Knight (accepted)	240 0 0

For earth-works &c., at Haileybury College, Herts, Mr. Josiah Forster Fairbank, C.E. Quantities supplied by engineer.—

Hartland & Bloomfield	£709 5 0

THORN & CO.
GROSVENOR ROAD, PIMLICO, WOOD PAVING MANUFACTURERS.

VENTILATION—PURE AIR.

Sheringham's Day and Night Ventilator for the admission of Pure Air.

THROUGH THE EXTERNAL WALL.
These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the blinds are closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 187 and 189 (late 117 and 118), Union-street, Borough, London.

TO INVENTORS.—All intending Patentees should procure the PRINTED INFORMATION regarding PATENTS—their cost, and mode of procedure to be adopted—issued gratis by the General Patent Company (Limited), 71, Fleet-street, London. ROBERT M. LATHAM, Secretary.

IMPORTANT to ARCHITECTS, SURVEYORS, &c. By means of F DANGERFIELD'S NEW PATENT IMPROVED LITHOGRAPHIC and METALLO GRAPHIC PRESS, a very material reduction is effected in Lithographed Bills of Quantities, Specifications, &c. A Price List forwarded on application
FREDERICK DANGERFIELD,
Inventor and Patentee of the Newly Improved Press,
No. 22 BEDFORD STREET, COVENT GARDEN, LONDON, W.C.

STANLEY'S IMPROVED DRAWING PEN

TO BRICKMAKERS and OTHERS.—TO BE SOLD, or LET on lease for a term of years, a BRICK FIELD, in the immediate neighbourhood of an important town in Kent. The Land is freehold. The demand for bricks is large, and daily increasing, and an unlimited quantity of bricks of first-rate quality can be produced. The situation is within a mile of two railway stations. For further particulars and terms, address, A. Z. 2, Office of "The Builder."

FARNBOROUGH and ALDERSHOTT
FREEHOLD and GROUND-RENT SOCIETY (Limited).—To BUILDERS and OTHERS.—Land on this Society's Estate at Farnborough, TO BE LET on building leases, or TO BE SOLD, upon advantageous terms.—Particulars may be had of the Architect, Mr. H. CURREY, 4, Lancaster-place, Strand, W.C.; or at the Offices of the Society, 16, New Bridge street, Blackfriars.
EDWARD CHATFIELD, Managing Director.

CITY of LONDON.—FREEHOLD BUILDING LAND.—The site of two houses at the corner of College-hill and Cloak lane (land-tax redeemed), TO BE LET by the Worshipful Company of Cutlers on a BUILDING LEASE for eighty years. Tenders to be sent to Cutler's-hall, Cloak lane, on or before MONDAY, the 2nd of NOVEMBER, next, after which day particulars apply to Messrs. BEAUMONT & THOMPSON, Solicitors, 19, Lincoln's-inn-Fields, or Messrs. TRESS & CHAMBERS, Architects, 27, Queen street, Cheapside.

KEYNSHAM BLUE LIAS LIME and CEMENT WORKS, SOMERSET.—TO BE SOLD by PRIVATE CONTRACT, by order of the Liquidator, the newly-formed FREEHOLD WORKS, occupying a site of 7a. 2r. 26p. or thereabouts. The existing kilns and ovens are capable of producing 70 tons of lime and 120 tons of cement weekly, and, profit is being supplied of by large contractors and eminent architects, the cement being used in many of the Government fortifications now in progress. The mid-lands are very substantial and commodious, and of the best description, principally by water power, but with steam power as auxiliary. Coals are supplied to the works at a very low price, and the Great Western Railway Station is within a short distance.—For further particulars apply to Messrs. N. LINDS & SONS, Solicitors, 47A, Moorgate-street; or F. MAYNARD, Esq. Liquidator, 19, Bread street, Cheapside; and of Messrs. FULLER & HORSEY, 13, Billiter-street, London.

BATTERSEA. — Between Clapham and Battersea Park. To BUILDERS and OTHERS.—LONG HEDGE FARM ESTATE TO BE LET on BUILDING LEASES direct from the Freeholders, at moderate ground rents. This property lies on either side of the Queen's-road extension, Battersea to Clapham, and immediately adjoining the Works of the London, Dover, and Chatham Railway Company, and the Windsor 4th road and station, where houses are in great demand. Roads and Sewers now forming by Low Level Sewer in course of construction will effectually drain the whole of this district. Plans and further particulars apply to Messrs. COVERDALE, LEE, COLLYER-BRISTOW, & WITHERS, Solicitors, 4, Bedford-row, W.C.; to Mr. CHARLES LEE, 20, Golden-square; or to Mr. R. J. WITHERS, 51, Doughty street, W.C.

REPAIRING LEASES.—To TRUSTEES, SURVEYORS, and OTHERS.—The Advertiser is desirous of taking on lease, at a rental, an Estate of weekly or other houses requiring an outlay for repairs. Excellent references.—Address, A. Z 6, Southampton-buildings, Holborn.

LEE, KENT.—LAND TO BE LET, by the Merchant Taylors' Company, on Building Leases of 80 years from Michaelmas, 1863, by TENDER, to be addressed, before the 31st OCTOBER next, to SAMUEL FISHER, Esq. Solicitor, Merchant Taylors' Hall, Threadneedle street, London, of whom particulars, with a plan, may be obtained. The Company do not bind themselves to accept the highest or any Tender.

GROUND in BASINGHALL-STREET, now occupied by Houses and Warehouses, known as Nos 20 and 21, Basinghall-street, TO BE LET by TENDER, for Building purposes. A plan of the ground and form of Tender may be obtained at the Offices of EDWARD LANSON, Esq. No 7a, Lawrence Pountney-hill, Cannon-street; or of Messrs. HOLLINGSWORTH, TYERMAN, & GREEN, No. 24, Gresham-street, London; where Tenders, under seal, are to be delivered on or before the 1st DECEMBER next. The Owner does not bind himself to accept the highest or any Tender.

TO BUILDERS and OTHERS.—TO BE LET, on lease, at a ground rent, or SOLD, freehold, TWO PAIRS of semi detached CARCASSES (one pair partly finished), situate close to the Park Station, Tottenham. Would be finished ready completed.—Apply to Mr. SANDERS, Park Station, Tottenham.

CHISLEHURST, Kent.—TO BE SOLD, about 17 acres of FREEHOLD LAND, being part of the Camden Estate, on sale from Bromley station, in the Mid Kent line, and a few minutes' walk from the station on the direct Tunbridge line from Charing-cross and London Bridge, delightfully situate, well timbered, gravelly soil, and well adapted for villas. Also, TO BE LET, on building leases, from 50 acres to 100 acres, at moderate rents.—Apply to Mr. DAVENPORT, Estate Agent, 35, Bucklersbury, City, E.C.

TO BE LET on LEASE, HOUSE and BUILDER'S PREMISES, Carpenter's Shop, with room for eight benches; three-stall stable, nail-room, and good yard. The plant to be taken at a valuation.—Apply to WATLIN & SON, opposite the Railway Station, Putney.

TO BE LET, the Old WATERWORKS, situate near the Cemetery, Hull; the Engine-house, with two good 20-horse power Steam-engines, and a very large Iron Tank, &c. Also, Two Cottages and a Plot of Land adjoining the above. The Premises are situate close to the railway, on the Spring Bank, and are well adapted for a manufactory or other business that requires a plentiful supply of water.—Further particulars and a view of the Premises may be had by application to Mr. DAVID THORP, Corporation Surveyor,—By order, ROBERT WELLS, Town Clerk.
Town Hall, Hull, 21st September, 1863.

THE LOWESTOFT IMPROVEMENT ACT, 1854.—Eligible BUILDING LAND, commanding extensive and uninterrupted views of Lowestoft and Yarmouth roadsteads.—The Commissioners, acting in execution of the above Act, have determined to offer the piece of LAND LAND on the Cliff, fronting, with the road of the Cliff, about seven acres, lying to the south of and adjoining the Rise beyond the Bath Hotel, for Sale by Auction, upon a BUILDING LEASE, for ninety-nine years. Ground rent 10l. per annum. The Lessee will be required, at his own expense, to prepare and submit, for the approval of the said Commissioners, a Building Plan, and agreeably thereto to erect, within the first two years of the said term, Twelve Dwelling-houses, of a value of not less than 500l. each. For further particulars apply to Mr. W. R. SEAGO, Clerk to the said Commissioners, 15, High street, Lowestoft.

ELIGIBLE FREEHOLD BUILDING LAND, in KENT, within one mile of two stations on the North Kent Railway, and thirty minutes' ride by rail to London Bridge and Charing-cross.—TO BE LET or SOLD, in one or small lots, from TEN to TWENTY ACRES of MEADOW LAND, on the high London road to Erith, admirably adapted for genteel residences and villas, delightfully situated, with fine views of the country and River Thames, near a church, gravelly soil, good water and gas laid down. Ground rent moderate. Apply to Mr. DAVENPORT, Land and Estate Agent, 35, Bucklersbury, City, E.C.

WATFORD, HERTS.—TO BE LET on BUILDING LEASES, several PLOTS of FREEHOLD LAND, in the neighbourhood of the above town, in close proximity to the Station, and on the new roads recently made.—For Plans and particulars apply to Mr. EDWARD H. BURNELL, Surveyor, 32, Bedford-row, London, W.C.

TO CARVERS and GILDERS.—TO BE DISPOSED OF, and entered upon directly, an Old Established BUSINESS in the above line, with Fine Art Repository attached, well situate in a thriving town, the owner having no further occasion for business.—Address, A. B. Mr. Alden's, Solicitor, Ipswich.

TO DECORATORS and PAINTERS.—TO BE SOLD, the Old-Established BUSINESS of a DECORATOR and PAINTER, which has been carried on in the principal town of one of the Midland counties for upwards of a century. The profits average 450l. per annum. Apply to Mr. DUBOIS, Solicitor, 3 Church passage, Gresham-street, London.

TO SMITHS and BUILDERS.—TO BE DISPOSED OF, in the City, near Farringdon-street, a SMITH'S SHOP, with double brick forge, anvil, vices, and benches, and tools of every description. For particulars, in prize of Mr. TAYLOR, Ironfounder, Seacoal-lane, Skinner-street, City.

TO BUILDERS and OTHERS.—TO BE SOLD, a lucrative and respectable BUILDING BUSINESS, situate in a most thriving town in the county of Somerset. The above business has extensive connexion. The sole reason of the proprietor retiring, wishing it is the fact of his numerous other engagements preventing his personal superintendence of this branch. The stock and plant, which is light, to be taken off at a valuation in the usual way. With the business may be rented or purchased, if required, a capital and commodious dwelling-house, with every convenience, workshops, storerooms, yards, offices, &c. necessary for carrying on a first-class business.—For further particulars apply to Mr. WM. CRUSE, House and Estate Agent, Glastonbury, Somerset.

GOULD & PORTER (late CARY) are now manufacturing their improved 10-inch DUMPY LEVEL, last quality, complete for 9l. 10s. 0d.; with silver ring compass, 10l. 10s. 0d.; 12-inch ditto, ditto, 11l. 0s. 0d. and 12l. 12s. 0d. Best 5-inch THEODOLITES, 42l. 0s. 0d. All other MATHEMATICAL INSTRUMENTS at Revised Prices.—Optical and Mathematical Instrument Makers to the Admiralty, Royal Geographical Society, Royal Military College, Sandhurst, &c. Established upwards of a century.—181, Strand, London.

TO ARCHITECTS, BUILDERS, RAILWAY CONTRACTORS, AUCTIONEERS, & SPECIFICATIONS, CONTRACTS, ACCOUNTS, and every other description of DOCUMENTS, correctly and expeditiously COPIED, at 1½d. per folio of seventy-two words, by FRY & SON, Law Stationers, Printers, and Lithographers, 13 and 14, South-square, Gray's-inn, W.C. Plans and drawings copied, enlarged, or reduced, on reasonable terms.

OCTAVIUS N. SIMPSON, STAMFORD;
and see Specimens at the Office of
Messrs. PINDER SIMPSON & SONS, 29, Savile-row, London, and at the Museum of Practical Geology, Jermyn-street, W.
This stone (which is a perfect oolite), is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.

SLATES.—JONES & CO. have a STOCK of SLATES of different sorts, from the best quarries in Wales. SLABS and CISTERNS delivered at any station in quantities of not less than five tons, from their depôts, Bangor, Garston, Saltney, Chester, and Gloucester.

H. D. & CO.'S MANUFACTORIES, HIGH-STREET, LAMBETH, LONDON;
ROWLEY REGIS, STAFFORDSHIRE; and SMETHWICK, near BIRMINGHAM.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Baryte from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

THE FLUO-SILICIC STONE-PRESERVING COMPANY, LIMITED.

39, CHARING CROSS, S.W. & 12, COPTHALL COURT, THROGMORTON STREET, E.C.

PATENT FLUO-SILICIC INDURATIONS for the PRESERVATION of STONE, CEMENT, and other like materials. The Company apply to the surface of Stone, Cement, &c. a solution of Fluo-Silicic Acid, and Silicate of Potash. These are the only patents which embrace the use of that most valuable agent, Fluo-Silicic Acid. Bath, Caen, and other soft stones, when treated by the Company's solution, become extremely hard. The great expense of high ornament to buildings in hard stone has been an obstruction to Art; but since the Fluo-Silicic process can be applied as readily to soft stone after it is carved, that obstruction exists no longer. The Fluo-Silicic at once permanently arrests the decay of all stone.—For further information apply to the Manager of the Company, Mr. DUDLEY, Architect, as above.

BARTLETT, BROTHERS, & CO.

DEVONSHIRE WHARF, CAMDEN TOWN, N.W.

PATENT INDURATING SOLUTIONS,
For the Preservation of Stone, Cement, &c.;
PATENT SILICEOUS PAINT, FOR COATING BRICKS, CEMENT, &c.

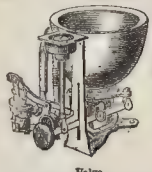
Prospectuses on application to the Patentees, TYE & ANDREWS, Brixton-road.

SUPPLIED BY ALL LEAD MERCHANTS AND IRONMONGERS.

INTERNATIONAL EXHIBITION, 1862.

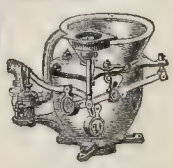
CLASS 36, NO. 6349.

3s. 9d.



The ONLY MEDAL "for STONEWARE" has been awarded to DOULTON & WATTS, LAMBETH POTTERY, LONDON

In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.



Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness, it cannot be surpassed by the most expensive closets.

FIGURE "D" STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

J. TYLOR & SONS' PATENT REGULATOR WATER-CLOSETS.

Valve.

Pan.

The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is insured. Any number can be worked by one supply-pipe. No cistern-valves, cranks, or wires required. The Closets can be seen in action at the Manufactory, and Illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate street, London

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION, 1862.

IMPERISHABLE TESSELATED PAVEMENTS,

combining a highly decorative and economical substitute for ordinary floors of their perishable coverings. MAW & CO.'S Pattern book, designed by M. Digby Wyatt, esq. together with a special design and estimate of cost adapted to any given dimensions of hall, passage, conservatory, verandah, front, &c. will be sent on application to Benthall Works, Broseley, Salop.

May be seen at the Exhibition of Building Inventions, &c. now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, free.

London Agents—W. B. SIMPSON & SONS, 456, West Strand, who have on view a great variety of Specimens of the Pavements.

PEAKE'S TERRO-METALLIC TILES,

PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21 Wharf, Macclesfield street North, Uxbridge road, Boats. N. Lastly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and lastly, that the "Reports of the Jurors," page 231, of the Great Exhibition, 1851, note the grant of a First-class Medal and rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION.

MAGNUS'S ENAMELLED SLATE

obtained the Medal of the Society of Arts, the Prize Medal at the Great Exhibition, 1851, Two First-class Medals at the Paris Exhibition, and Two Prize Medals at the International Exhibition of 1862.

Trashy imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the name of "MAGNUS" is upon each article.

Chimney-pieces, Billiard-tables, Table-tops, Baths, Wall-linings, &c. a New Illustrated Catalogue of which can be had at the Pimlico Slate Works 39 and 40, Upper Belgrave-place, Pimlico, S.W.

POLONCEAU and SEYSSEL ASPHALTE.

ESTABLISHED  1838

For covering Flat Roofs, Paving and Flooring of every description, especially in places subject to damp and vermin. This Asphalte is now extensively used for paving Stables (as shown above), the absence of joints preventing the generation of ammonia. For Estimates and Prices, &c. &c. apply to JOHN PILKINGTON, 15, Fish street-hill, London, E.C.

Country Builders supplied with Asphalte in Bulk for covering Footings, Area Floors, &c. with instructions to lay it down.

DURABILITY of GUTTA PERCHA TUBING.

—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving, in reply to the following letter FROM SIR RAYMOND JARVIS, Bart. VENNOR, ISLE OF WIGHT—Second Testimonial.—"March 10th, 1862.—In reply to your letter received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state with much satisfaction that answers perfectly. Many builders and others persons have lately examined it, and there is not the least apparent deterioration since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

NB From this testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD, CITY-ROAD, LONDON.

F. SMYRK, 1a, Newington-place, S.

VALENCIA SLATE SLAB QUARRIES, COUNTY KERRY, IRELAND.

MESSRS. FULLER & HORSEY are instructed to SELL by AUCTION, at the AUCTION MART, London, on WEDNESDAY, OCTOBER 28, at TWELVE, in one lot, unless an acceptable offer be previously made by private contract, the extensive QUARRIES and MILLS of the VALENCIA SLATE SLAB COMPANY, situate in the Island of Valencia, County Kerry, Ireland. The works have been carried on by the present company for about four years, and a very large outlay has been made in opening the quarries, and in erecting the mills and the requisite machinery. The quarries are situate on the side of a mountain, about 400 feet above the sea level, and an opening has been made for working about 120 feet wide, running into the mountain to about the same depth, uncovering a succession of platforms of slates of various widths. The slate rock lies most convenient for working, at an angle of about 35 degrees, and has a regular cleavage. The slabs are severed by wedges instead of by blasting, thus avoiding the large amount of waste occasioned by the latter process. The roof of the quarry is self-sustained, and is perfectly secure. The quality of the slabs is now well known and appreciated, and are taken in large quantities by the principal merchants in London and elsewhere. They take a beautiful and permanent polish, are particularly valuable for enamelling, are unaffected injuriously by furnace heat, and are raised in larger sizes than any other quarries. Tables made from the slab blocks is made into roofing slates, for which there is ample local demand. The present yield is about 2,000 lots of slate slabs annually, but by a comparatively small outlay in an extension of the workings this quantity may be doubled, the machinery at the mills being equal to prepare that quantity, and the demand at the present time being in excess of the capabilities of supply. The mills are situate about 2½ miles from the quarries, are connected by a good road of easy descent, which is kept in repair principally at the expense of the county; but it is believed that every facility would be afforded by the Knight of Kerry, who is the freeholder, for laying down a tramway by the side of the present road, which would much lessen the cost of carriage. The mills are most advantageously placed, being immediately contiguous to the pier, at which vessels of 150 tons burden can load alongside, and there are no pier dues nor wharfage payable. The harbour of Valencia is both safe and commodious, and freights to London are about the same as from the North Wales ports. The buildings are well arranged, and substantially erected They are fitted with sawing and planing machinery of the best description, fitted by Blyth, of Limehouse; and there are overhead cranes, tramrails, and every appliance for saving manual labour. There is a plentiful supply of water for the purposes of the mills, from a large open reservoir. The quarries and works are held on easy terms under an agreement for lease from the Knight of Kerry, for a term of fifty-seven years from 1st January, 1864, determinable at the lessee's option on giving six months' notice. The lease, a draft of which may be seen prior to the sale at the office of the Vendor's Solicitors, will be granted by the Knight of Kerry direct to the purchaser. The present Company have expended upwards of £9,000 upon the property. They have succeeded in establishing the reputation of, and a market for, the slabs, and have thoroughly proved the existence and uniform character of the slate, and the extent to which the workings may be carried: and they have supplied and erected the most approved modern machinery for the preparation of the slate for market, and it is confidently believed that the Works are now in that state that, with the personal attention of the owner, very profitable results may be anticipated.—The Works may be viewed by Cards only, which, with further particulars, may be had of Messrs. PALMER, NEVILLE, SHARP, & ELAND, Solicitors, 4, Trafalgar-square, W.C.; at the *Midland Counties Herald* office, Birmingham; at the Graham Hotel, Sackville-street, Dublin; at the Railway Hotel, Killarney; at the Adelphi Hotel, Liverpool; at the Mart, London; and of Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

LANGHEDGE NURSERY, UPPER EDMONTON.

MR. A. RICHARDS will SELL by AUCTION, on TUESDAY and WEDNESDAY, OCTOBER 20 and 21, at ELEVEN, the valuable NURSERY STOCK; including 5,000 apple, pear, plum, and cherry trees; 800 peach and nectarines, 2,000 gooseberries and currants, 1,000 choice standard roses, fine evergreens of all descriptions, 100 weeping ash, forest trees, &c.—On view. Catalogues obtainable on the Premises, and of the Auctioneer, Tottenham.

OLD STREET ROAD.—Freehold Houses and Ground Rents, including the New Tariff public house and Twelve other Houses and Shops; the whole producing a Rental of about £360.—In lots.

MR. PHILIP D. TUCKETT is instructed to SELL by AUCTION, at the MART, Bartholomew-lane, London, on TUESDAY, the 27th of OCTOBER, 1863, in eight lots, a very desirable FREEHOLD PROPERTY, including the Dwelling Houses and Shops Nos 38, 39, 40, 41, and 42, Old Street-road, and Nos 7, 8, and 9, Boot-street, in the Parish of St. Leonard, Shoreditch, let to respectable tenants at very low rent; an amply secured RENT of 12s per annum, arising out of that well accustomed public house known as The New Tariff, and three adjoining houses; together with the REVERSION of the above valuable property after an unexpired term of forty-nine years; and a GROUND RENT of 14l. per annum, arising out of Nos 3 and 4, Boot-street, producing a rack rental of 91l.—Particulars, with plans and conditions of sale, may be obtained at the Mart; of Messrs. POOLE & GARLICK, Solicitors, 3, Grey's Inn-square; and of Mr. PHILIP D. TUCKETT, Land Agent and Surveyor, 76, Old Broad street, E.C.

TO BUILDERS, CONTRACTORS, AND OTHERS.—TIMBER, PAVING, &c.

MESSRS. KENNEDY & BONNY will SELL by AUCTION, on the PREMISES, Sun-street, Bishopsgate street, E.C. on TUESDAY, OCTOBER 20, 1863, at TWELVE for ONE, the MATERIALS of the Extensive TIMBER SHEDS and STORES standing upon the Premises lately occupied by Messrs Sykes, Timber Merchants, comprising a large quantity of useful seasoned timber, York paving, granite pitching, tiles, bricks, and other materials, and the office and counting house fittings.—May be viewed any time; and catalogues had on the Premises; and at the Auctioneers' Offices, Camden-town, N.W.

CROYDON, SURREY.—Valuable Building Plots.

MESSRS. BLAKE will SELL by AUCTION, at the New Inn, Croydon, on SATURDAY, OCTOBER 24th, at TWO for THREE o'clock, Thirty highly Valuable FREEHOLD BUILDING PLOTS, having Eligible Frontages in the High-street (at South End), Lower Coombe-street, South-bridge-road, Keen's-road, and a new road connecting the High-street with South-bridge-road. The land offered to capitalists and builders at fair rates for the erection of shops and private houses, being immediately contiguous to the Town, and within easy distance of the railway-stations. The intended railway terminus at South End, when completed, will materially enhance the value of the Land.—Particulars, with plans, may be had at the New Inn, Croydon; at Garraway's Coffee house, Change-alley; of Messrs. CURREY & ROLLAND, No 9, Old Burlington-street, London; and of Messrs. BLAKE, Croydon.

OXFORD.—VALUABLE BUILDING MATERIALS, comprised in the several Houses in Beaumont-street and Magdalen-street, the intended Site for the erection of the Randolph Hotel.

MR. JOHN FISHER begs to announce that he is instructed by the Randolph Hotel Company to SELL by AUCTION, in the month of OCTOBER next, the above BUILDING MATERIALS; consisting of roofs, floors, doors, shop-fronts, sashes and frames, partitions, staircases, fittings, &c which will be found peculiarly good, from the circumstance that the houses have been built within a few years.—Further particulars will be advertised previous to the sale.

EXTENSIVE SALE of BUILDING MATERIALS, Chester-street, Kennington. To BUILDERS and OTHERS.—100 Stoves, Stone Paving, &c. &c.

F. HALL & SON will SELL by AUCTION, on MONDAY next, OCTOBER 19th, at TWELVE for ONE o'clock precisely (on account of the number of lots), on the PREMISES, at the Sir Sidney Smith and King's Arms, Chester street, Kennington, the whole of the very excellent TIMBERS, FITTINGS, FIXTURES, and other effects, of some Government Offices, taken down and removed, and comprising the yellow paste, from 21 feet to 32 feet long, long plates, the sound yellow flooring and match boarding, 10,000 feet of rafters and quartering, the modern fittings, fixtures, &c. in 50 handsome folding room and other doors, 40 pair of sashes and frames, excellent partitions, with doors, 50 closet and cupboard fronts, several nests of pigeon holes with doors, 50 feet of cocoa-nut matting, 300 brooms and brushes, various, 12 pairs of water boots, large map press, excellent stone paving, stone sinks, 30 marble and other chimney-pieces, and other effects. Catalogues of the Auctioneers, 1, Thurloe-terrace, Wandsworth-road.

TO BUILDERS, DECORATORS, LANDLORDS, AND OTHERS.

MR. EDWIN WHITE will SELL by AUCTION, at 12, Holborn Bars, and 1, Castle-street, Holborn Hill, on TUESDAY Next, at ONE, a Stock of FRENCH and ENGLISH PAPERHANGINGS, in great variety, comprised in about 150 lots. Also, nearly 200 Pain and Sculptured CHIMNEY PIECES in marble and slate; half-ton of paint and white lead, seven water-closets, 650 feet gilt moulding, 10 dozen sherry, and items.—View and catalogues Monday and Morning of Sale.

TO BRICKMAKERS.—All Parties who burn BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr ROBERT WHITE, and which may be seen in operation at the Brickfields of

J. R. WHITE & BROTHERS, Erith, Kent.

The advantages of this plan are two fold.

1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 45 to about 10 per cent of the total make, which in itself represents a large permanent saving.

2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.

Licenses for use of the Patent granted to Brickmakers, on application to the Patentees, 17, Millbank street, Westminster.

BRICKS.
FINE WHITE FACING BRICKS.
WHITE ORNAMENTAL BRICKS.

81, Bishopsgate-street Within, July, 1863.

CONTRACTS.

WAR DEPARTMENT CONTRACT.—NOTICE to BUILDERS.—TENDERS are required for WORKS to be EXECUTED in TAKING DOWN and RE-BUILDING about 230 feet in length of the GUNWHARF WALL, Portsmouth.

Parties desiring to Tender for these works in mass are to leave their names at this Office on or before the 3rd day of NOVEMBER, 1863, and pay the sum of ten shillings and sixpence for the Bills of Quantities, which will be forwarded to each party as soon as prepared by the Government Surveyor.

The Secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, Portsmouth, 19th October, 1863.

BOROUGH of NEWCASTLE-UPON-TYNE.—HOSPITAL of ST MARY THE VIRGIN.—ERECTION of the ROYAL FREE GRAMMAR SCHOOL.—To BUILDERS and OTHERS.—The Corporation of Newcastle-upon-Tyne invite TENDERS from Builders and others for the ERECTION of the ROYAL FREE GRAMMAR SCHOOL, and other Works connected therewith, at Rye Hill, in Newcastle-upon-Tyne, according to plans, working drawings, and specifications prepared by Mr. John Dobson, and sanctioned by the High Court of Chancery. The plans and specifications may be inspected on application to the Architects, Messrs. JOHNSTON, HOOD, & SONS, 34, Pilgrim-street, where further information can be obtained; and sealed Tenders, addressed to "The Chairman of the Committee on Schools, Charities, and Hospitals," will be received at the Town Clerk's office, Guildhall, up to SIX o'clock on TUESDAY, the 27th day of OCTOBER next. The Corporation do not bind themselves to accept the lowest or any Tender. By order,

JOHN CLAYTON, Town Clerk.

Guildhall, Newcastle, 30th September, 1863.

TO MASONS and PAVIORS.—The Board of Works for the Wandsworth District are desirous of receiving TENDERS for the SUPPLY and LAYING complete of about 3,000 feet run of 12-inch by 8-inch DRESSED ABERDEEN FLAT CURB, and about 15,000 feet superficial of 4-inch ROLLED YORK PAVING, 4 feet wide, in the parish of Battersea. The specification can be seen at the Offices of the Board, as below, between the hours of TEN and FOUR. Tenders are to be sent in under seal, addressed to the Board, and indorsed "Tender for Paving Battersea," on or before the 1st day of NOVEMBER next. Security will be required for the due execution of the Contract. The Board do not pledge themselves to accept any Tender.—By order of the Board of Works for the Wandsworth District, ARTHUR ALEXR. CORSELLIS, Clerk to the Board.

Battersea Rise, Wandsworth, S.W. October 14th, 1863.

TO MASONS, PAVIORS, STONE MERCHANTS, and OTHERS.—The Vestry of the Parish of Chelsea will meet at the Vestry Hall, King's road, on TUESDAY, the 27th OCTOBER instant, at THREE o'clock in the afternoon, to receive TENDERS from persons willing to CONTRACT for twelve months for the EXECUTION of WORKS and for the SUPPLY of MATERIALS connected with the above Parish, in the said parish, as may be required and directed.—Further particulars, with the form of Tender, may be had on applicat on at this Office. Sealed Tenders, signed by the proposed contractor, with the names and description of two sufficient sureties for the performance of his contract, to be delivered to the Clerk by or before TWELVE o'clock on TUESDAY, the 27th instant. The legal charges of the contract to be paid by the contractor upon the execution of the same. No Tender will be received or accepted unless made on the printed forms.—By order,

CHARLES LAHEE, Vestry Clerk.

Vestry Hall, King's road, Chelsea, October 14, 1863.

TO BUILDERS.—TENDERS are required for the whole or any part of the several Works in ERECTING and COMPLETING COTTAGES and HOUSES at Hurst, near Ashton-under-Line, for John Whittaker, Esq.—Application for bills of quantities to be made to us, per post, on or before SATURDAY, the 31st inst. after which date all particulars as to time and place for inspecting the drawings, &c. will be forwarded.

PAULL & AYLIFF, Architects, India-buildings,
Dated 21st October, 1863. Cross-street, Manchester

BUILDERS and CONTRACTORS desirous of TENDERING for certain ADDITIONS, ALTERATIONS, and REPAIRS to a HOUSE situate at Standen, in the county of Hertford, for the purpose of converting same into a RAILWAY INN, for the Mr. ST. PALMER, of Hertford, may see the plans and specification upon the Premises, on MONDAY, the 26th instant; and at the Office of the Architect, on and after TUESDAY, the 27th instant. Tenders to be addressed to the Architect, and delivered not later than TWELVE o'clock on SATURDAY, NOVEMBER 1st.

CHAS. CHAPMAN, Architect.

7, St. Mildred's-court, Poultry, London, E.C.

CONTRACTS.

TO CONTRACTORS and OTHERS.—The Local Board for the District of Chorley (Alderley Edge), Cheshire, are desirous of receiving TENDERS for the EXECUTION of CONTRACT No 2, being the necessary Works for making and completing about 2,800 lineal yards of Brick Main sewers. Plans and sections may be inspected, and specifications obtained, at the Office of the Engineer to the Board, Mr. S. C. TRAPP, 18, Cooper-street, Manchester, on payment of 5s. Sealed Tenders, endorsed "Tender for Contract No. 2," must be left at the Office of the undersigned, 16, Upper street, Manchester, on or before THURSDAY, 29th OCTOBER. The Board do not bind themselves to accept the lowest Tender.—Dated this 2nd October, 1863.

W. L. WELSH, Law Clerk to the Board.

BOARD of WORKS, WHITECHAPEL DISTRICT.—A meeting of this Board will be held on MONDAY, the 26th day of OCTOBER, 1863, at SIX o'clock in the evening, at the Office, 15, Great Alie-street, Whitechapel, to receive TENDERS for the CONSTRUCTION of a BRICK SEWER, in Thomas street, partly in the parish of Whitechapel and partly in the hamlet of Mile-end New Town, within the said district. Plans, section, and specification may be inspected, and further particulars, with printed forms of tender, obtained on application to Mr. FREDERICK, Surveyor, between the hours of TEN and FOUR, at the Office of the Board. Sealed Tenders, in which a 10*l.* note is to be inclosed must be delivered at the Office, previous to the hour of meeting; and any Tender which is not upon the form prepared by the Board, and duly signed by the person or persons tendering, will be rejected. Persons tendering, or their representatives, are required to attend the meeting of the Board. The Board do not bind themselves to accept the lowest or any Tender. ALFRED TURNER, Clerk to the Board.

15, Great Alie street, Whitechapel, 14th October, 1863

ST. SAVIOUR'S DISTRICT.—To Contractors, Builders, and Others.—The Board of Works for St. Saviour's District are desirous of receiving TENDERS for the performance of the WORKS in making the requisite ENTRIES from Houses and Buildings into the MAIN and other SEWERS, and otherwise connected with the Drainage and Sewerage within the district, for the term of one, two, or three years. The Tenders to be based on the schedule of prices printed for the purposes of the Board, a copy of which can be had upon application at the Board room on deposit of 1*s.* to be refunded on the schedule being returned. The Contractor will have to enter into a contract according to the printed form attached to such schedule, and he and two sureties to execute a joint and several bond in 250*l.* constituted for the performance thereof. All persons tendering must fill in the printed form of Tender, with names of sureties inserted in schedule, and must send in their Tenders (which will be sealed up and endorsed "Tender for General Works," as per before FOUR in the afternoon of WEDNESDAY, the 4th day of NOVEMBER next, and the Contractor and his sureties are attended at SIX o'clock in the evening of that day. The Board will pay the expense of the contract, that of the bond must be borne by the Contractor. The Board do not bind themselves to accept the lowest or any Tender. By order of the Board,

HERBERT STURMY, Clerk

Board room, Emerson-street, Bankside, 21st October, 1863.

TO SEWERS CONTRACTORS and OTHERS.—The Sewers Committee of the Parish of Saint Mary, Newington, Surrey, will meet at the Vestry-room of the Parish Church, on FRIDAY, the 6th of NOVEMBER next, at SEVEN o'clock in the evening, to receive TENDERS for the EXECUTION of JOBBING and MEASURED WORKS in connexion with the Drains and Sewers in the parish.—Printed schedules and forms of Tender can be obtained at the Office of Mr. HENRY LEVER, the Surveyor of Sewers, 2, Trinity square, Newington, on payment of 10*s.* which money will be returned to the parties tendering when the Tenders are opened. No other Tenders will be received. Securities will be required for the due performance of the contract, and the Committee do not bind themselves to accept the lowest or any other Tender.

H. & F. CHESTER, Joint Surveyors to the Vestry.

October, 1863. 1, Church-row, Newington Butts

METROPOLITAN BOARD of WORKS.

THAMES EMBANKMENT, MIDDLESEX SIDE.—To BUILDERS, CONTRACTORS, and OTHERS. The Metropolitan Board of Works hereby give notice that they will meet at the Office of the Board, Spring-gardens, S.W. on FRIDAY, the 27th day of NOVEMBER next, at TWELVE o'clock at noon precisely, and will then be prepared to open TENDERS by parties who may be willing to ENTER INTO CONTRACT for CONSTRUCTING, CONSTRUCTING, and MAINTAINING in REPAIR for TWELVE calendar months, the following WORKS, that is to say:—A certain intended Embankment Wall, 1,570 feet in length, or thereabouts, with certain landing places, Steam-boat pier, Sewers, Subway, Storm outlets, and other works in connexion therewith, situate in and adjacent to the foreshore of the River Thames, on the Middlesex side, between Waterloo Bridge and the Eastern end of the Temple gardens. Parties desiring to submit Tenders may, on and after WEDNESDAY, the 14th inst. upon payment of 10*s.* 6*d.* obtain plans, sections, specification, form of letter, and other particulars, on application to Mr J. W. BAZALGETTE, Engineer of the Board, at the Office, Spring-gardens, between the hours of NINE a.m. and FOUR p.m. or on Saturdays between the hours of NINE a.m. and TWO p.m. until THURSDAY, the 26th day of NOVEMBER next. The Tenders are to be addressed to the Clerk of the Board, and must be delivered at this Office before FOUR o'clock on the last-mentioned day, and no Tender will be received after that hour. The parties Tendering must be in attendance at the Board at TWELVE o'clock on the day appointed for opening Tenders. The Board do not bind themselves to accept the lowest or any Tender, and the party whose Tender shall be accepted will be required to provide two approved sureties for the due and satisfactory performance of the works

JOHN POLLARD, Clerk of the Board.

Spring-gardens, S.W. October 3, 1863.

TO BUILDERS.—Persons desirous of TENDERING for the ENLARGEMENT of ST. PAULS CHURCH, Cambridge, may see the drawings and specification at the Office of the Architect, Mr. R. REYNOLDS ROWE, 21, Emmanuel-street, Cambridge. Sealed Tenders to be delivered to the Rev. HENRY HALL, St Paul's Parsonage, not later than SATURDAY, the 7th day of NOVEMBER, 1863. The Committee do not bind themselves to accept the lowest Tender.

[For remainder of Contracts see next Page.

CONTRACTS.

BUILDERS desirous of TENDERING for the ERECTION of a DETACHED VILLA, at Eltham, Kent can see the plans and specifications at the Office of Mr. THOMAS CHESTER HAWORTH, Surveyor, Eltham, to whom Tenders must be sent, on or before TUESDAY, the 3rd day of NOVEMBER, 1863, by FOUR o'clock. The lowest or any Tender not necessarily accepted.

TO BUILDERS and CONTRACTORS.—Persons desirous of TENDERING for the various WORKS required to be done in the ERECTION of a NEW WAREHOUSE in Rutland street, Leicester, may inspect the drawings, specification, and conditions and obtain the quantities, at my Office on and after NOVEMBER 2nd. Tenders to be delivered on or before NOVEMBER 7th, at TWELVE o'clock. The lowest or any Tender not necessarily accepted.

FRANCIS DRAKE, Architect, 30, Market street, Leicester.

TO BUILDERS, CONTRACTORS, PROMOTERS of PUBLIC COMPANIES, and OTHERS.—Messrs. C. A. HAIG & CO. having purchased the Freehold of Argyll House, the residence of the late Earl of Sondes, for the purpose of Building Wine Vaults, are prepared to receive TENDERS for the BUILDING LEASES, for nearly the whole upper portion of the Ground, comprising about half an acre, in the immediate neighbourhood of Regent Circus, with frontage to Argyll street, Regent street, and access at the back to Marlborough Mews and Queen street, Oxford street. Plans may be seen and full particulars obtained at the Offices of C. A. HAIG & CO. Wine Merchants, 134, Fenchurch street, City; or 88, St. James's-street, S.W.; or from Messrs. HARMOOD & PATHSON, Solicitors, No. 10, Clement's-lane, E.C.

MIDLAND RAILWAY.—The Directors are prepared to receive TENDERS for the ERECTION of ADDITIONAL FITTING SHOPS, and other Works in connexion therewith, at the Well Green Station, at Leeds. Parties desirous of Tendering for the same may inspect the plans &c. and obtain copies of the quantities, upon application at the Engineer's Office, at the above Station, on and after MONDAY, the 26th instant. Sealed Tenders (upon the printed forms supplied by the Midland Railway Company) to be forwarded to the Secretary to the Way and Works Committee, Midland Railway, Derby, by 10 A.M. on or TUESDAY, the 3rd day of NOVEMBER next. The Directors do not bind themselves to accept the lowest or any Tender. By order,

Derby, October 20, 1863. G. N. BROWNE, Secretary.

WEST HAM LOCAL BOARD of HEALTH.—To BUILDERS.—Notice is hereby given, that the Board of Health for the District of West Ham, in the County of Essex, are prepared to receive TENDERS for the ERECTION of TWO COTTAGES, in their Land at Canning Town, adjoining the Sewerage outfall Works.—Conditions of Contract, forms of Tender, and any other information, may be obtained at the Office of the Local Surveyor, at Rokeby House, in Stratford. Tenders are to be delivered at my Office, at Rokeby House, not later than MONDAY, the 2nd NOVEMBER, and each of them must contain a ten-pound Bank of England note, endorsed by the party Tendering, to be returned in the event either of the Tenders not being accepted, or on the completion of the contract or bond. By order of the Board,

CHARLES WILSON, Clerk.

Rokeby House, Stratford, E. October 21, 1863.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr. ROBERT WHITE, and which may be seen in operation at the Brickfields of

J. B. WHITE & BROTHERS, Erith, Kent.

The advantages of this plan are two-fold:

1st. Nearly all the bricks are burnt into stocks, and the yield of inferiors is reduced from 5 to about 10 per cent of the total make, which itself represents a large percentage saved.

2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.

Licence for use of the Patent granted to the makers, on application to the Patentees, 12, Millbank-st. Westminster.

TO BRICKMAKERS, BUILDERS, and OTHERS.—TO BE SOLD, by PRIVATE CONTRACT, a CLAYTON'S PATENT No. 8 B BRICKMAKING MACHINE, latest improved, nearly new, having been in use only two seasons; the present proprietor parting with it to make room for a larger one. It is now making 30 thousand bricks per day, and may be seen at work, and terms, &c. known on application to Mr. HAYWARD, Yard Farm, Brixton, or to Messrs. HAYWARD, Yard Farm, Brixton, or to Messrs.

BRICKS.

Country Builders supplied with Asphalte in Bulk for covering Footings, Barn Floors, &c with instructions to lay it down.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of GUTTA PERCHA Tubing, the Object Per Se Commends itself as one to be adopted, and the following extract from PROFESSOR RAYMOND'S, Fleet Street, Report, dated "Wright Son, Pocklington, 4th March 10th, 1852.—In reply to your letter received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state with much satisfaction, it answers perfectly. Many leaders and other pipes we have lately examined it, and in no case the least Thing to become the first appearance, however, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD, CITY-ROAD, LONDON.

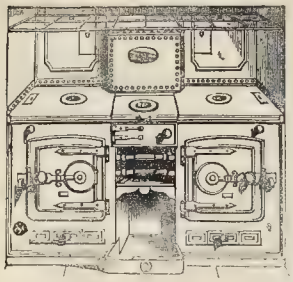
THE PRIZE MEDALS,
LONDON, 1851. PARIS, 1855. LONDON, 1862.
AWARDED TO
COTTAM & COMPANY,
No. 2, WINSLEY-STREET, LONDON, W.
FOR PROGRESSIVE AND GENERAL IMPROVEMENTS IN
STABLE FITTINGS AND HARNESS BRACKETS.
PATENTEES AND ORIGINAL INVENTORS OF
THE IMPROVED SYSTEM OF STABLE AND HARNESS FITTINGS,
PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS, AS WELL AS BY THE PRINCIPAL NOBILITY, GENTRY, AND HUNTING ESTABLISHMENTS IN THE KINGDOM.

SECURITY FROM ACCIDENT by the use of the Patent Halter Guide and Improved Curved Top-plate; PROMOTION of HEALTH, COMFORT, and CONDITION, by the cleanliness and power of resisting infection of the Mangers and Troughs; and also of the Patent Drop Cover, to curtail the quantity of water to be imbibed. ECONOMY in the USE of FOOD, from the improved formation of the Fittings, and by means of the Patent Portable Seed-box, are some of the peculiar recommendations of Cottam's Patent Componised, Enamelled, and Galvanized Iron Fittings for Stalls and Loose Boxes.

COTTAM'S PATENT COMBINED SADDLE and HARNESS BRACKETS; IMPROVED SURFACE GUTTER, WITH MOVEABLE SAFETY COVERS; Sanitary Traps, Cheap and Durable Corn-bins, and every Article requisite for the Stable and Harness-room.



IRON GATES, FENCING, and HURDLES MADE by MACHINERY.

COTTAM'S newly-invented REGISTERED NOISELESS MANGER SHACKLE and GUIDE FOR HALTER-STRAP, and IMPROVED VENTILATING HARNESS BRACKETS, are only to be obtained from the Inventors, and can be seen in use at their Manufactory.

COTTAM & CO. exhibit for inspection, at their Iron Works, 2, Winsley-street, W., an extensive range of full-sized Stalls, Loose Boxes, and Harness Rooms, the most complete that can be imagined.

ILLUSTRATED CATALOGUES and LITHOGRAPHS free, on application to COTTAM and CO. 2, WINSLEY STREET, Oxford-street, London, W.

COTTAM & CO.'S only address in London, is 2, WINSLEY STREET, W.
N.B. WINSLEY STREET IS THE STREET OPPOSITE THE PANTHEON.

FENDERS, STOVES, FIRE-IRONS, AND CHIMNEY-PIECES.

Buyers of the above are requested, before finally deciding, to visit

WILLIAM S. BURTON'S SHOW-ROOMS.

They contain such an assortment of FENDERS, STOVES, RANGES, CHIMNEY-PIECES, FIRE-IRONS, and General IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. PATENT WORCESTERSHIRE RANGE

PRIZE MEDAL 1862, AWARDED FOR EXCELLENCE.

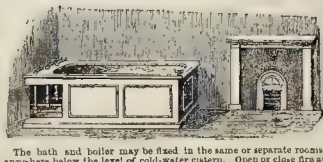
The above RANGE is most complete, and strongly recommended for its unrivalled ECONOMY, CLEANLINESS, CONVENIENCE, DURABILITY, and is a certain CURE for SMOKY CHIMNEYS.

It is an entirely new invention, and consists of large MEAT ROASTER, PASTRY OVEN, and WROUGHT-IRON BOILER. The top forms a HOT PLATE for BOILING, STEWING, &c. The whole heated by ONE SMALL FIRE. One 5 feet wide is equal to an ordinary Range 8 feet wide.

Extracted from the "London Daily Telegraph," May 19th, 1862.

"International Exhibition, Class 31.

"Of the most recent inventions it should be said that Messrs. JONES & ROWE'S Patent Worcestershire Range has attracted very special attention, and has been commended by the best authorities. A valuable peculiarity of their Ranges is the placing of the OVEN and ROASTER one above the other instead of *side* by *side*; and the ROASTER is constantly replenished with fresh air.



INVENTORS AND MANUFACTURERS,

JONES & ROWE, WORCESTER,

AGENTS FOR LONDON: BARRON, SON, & WILSON, 436, STRAND, W.C.

Illustrated Catalogues, with Testimonials and Prices, forwarded on application.

J. TYLOR & SONS' PATENT BATH APPARATUS.

The bath and boiler may be fixed in the same or separate rooms anywhere below the level of cold-water cistern. Open or close fire at pleasure. No brickwork setting for boiler required.

Estimates given from architects' drawings, or by inspection of buildings.

Catalogues, containing Nine Illustrations of different methods of heating baths, sent on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate street, London.

PORTABLE STEAM-ENGINES FOR HIRE OR SALE.
R. RICHARDS & CO. Upper Ground Street, Blackfriars Road.

S. GERISH'S PATENT MORTISING, DRILLING, and BORING MACHINES, and PATENT SELF-CORING MORTISE CHISELS.

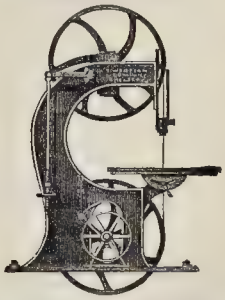
These Machines have five important advantages over those hitherto in use.

1st. The Chisels are used in pairs, which are fixed against a circular revolving disc, by which means they can be made to work with an accuracy not attainable by the single reversing chisel.

2nd. The Chisel being recessed at the back, the chips are brought out at each stroke, requiring no core driver.

3rd. The Chisels can be instantly altered for cutting the wedging without springing or altering the bed of Machine

4th. Attached to the disc or tool-holder, is a drilling apparatus for boring wood or iron, by boring a hole previous to mortising hard wood; it may be worked as readily as the softest material. And,



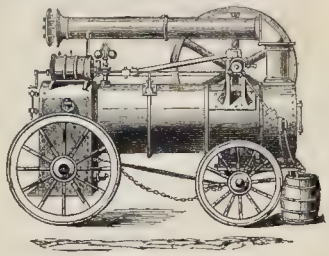
5th. The Machine being worked by a treadle which, while it leaves both hands at liberty for shifting the work, enables a force more than double that which can be applied to a Hand-lever Machine.

Price, with Drilling Apparatus, 16*l.*
Do. without do. 14*l.*

Manufactory—60, Shoe-lane, Holborn, E.C.

Ordinary Chisels can be altered to [illegible] Gerish's Patent.

S. WORSSAM & CO.'S PATENT IMPROVED BAND SAW MACHINE.



(1-inch scale.)

S. Worssam & Co. have recently made new patterns for band saw-machines of two sizes, and introduced all the latest improvements to obviate the breakage of saws, and can with the greatest confidence, recommend their new machines as the best yet out.—For priced Illustrated Circulars, with full particulars, apply at the Works, 304, King's road, Chelsea, S.W.

POWIS, JAMES, & CO.
SAW MILL ENGINEERS,
Victoria Works, Blackfriars road, London.

SHOW-ROOMS—147, HOUNDSDITCH, CITY. WORKS—LONDON AND BIRMINGHAM.

Estimates and Designs for Lighting Theatres, Concert Rooms, and Public Buildings, forwarded free.

BROWN & GREEN'S

PATENT KITCHEN RANGES.

PRIZE MEDAL, 1862.

These Ranges combine the latest improvements with great simplicity and durability. They afford facility for roasting meat in front of the fire without interruption to the action of the oven, hot plate, boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, and

CURE OF SMOKY CHIMNEYS,

these Ranges are unequalled. They are of all sizes and prices; and the large ones, fitted with Bath and Steam Apparatus, &c. form the most complete appointment for large establishments. Designs, &c. may be had on application at THE LONDON WAREHOUSE,

81, BISHOPSGATE STREET WITHIN.

"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept 6, 1862.

EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND.

MUSGRAVE'S PATENT STABLE and HARNESS FITTINGS

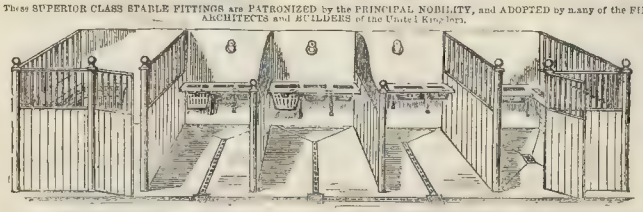
MUSGRAVE'S PATENT HARMLESS LOOSE BOXES.

MUSGRAVE'S PATENT IRON COW STALLS and PIGGERIES.

Architects who have not seen these fittings are requested to write for engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition.

They can be seen in first-class stables in almost every county in England; and MUSGRAVE, BROTHERS, are now fitting several very large establishments under direction of London architects, noted for employing only what is the best of its kind.

Musgrave's Patent Slow-combustion Stove

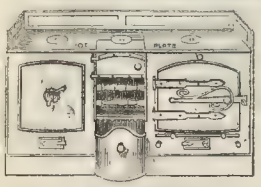


Is the nearest approach to Warming by Hot Water. It will burn in churches from Saturday till Sunday evening, without attention during the hours of worship. In halls will burn day and night for weeks, with little care. Capable of warming a large apartment for twenty-four hours, at a cost of 3d.; and deserves general attention because of its safety, healthfulness, durability, and extreme simplicity. For full particulars apply to

MUSGRAVE, BROTHERS, Ann-street Ironworks, Belfast.

BARTON'S PATENT PRIZE MEDAL STABLE FITTINGS

AND ENAMELLED MANGERS.



These SUPERIOR CLASS STABLE FITTINGS are PATRONIZED by the PRINCIPAL NOBILITY, and ADOPTED by many of the FIRST ARCHITECTS and BUILDERS of the United Kingdom.

J. BARTON solicits attention to the NEW STABLE just completed, with full size Stalls, Loose Boxes, and Harness Room, now open for inspection, at the Manufactory, 370, Oxford-street, where an extensive assortment of all kinds of Stable Furniture, upon the most modern and improved principles, are to be seen.

A new Illustrated Catalogue, with numerous engravings of the improved method of fitting up Stables, forwarded on receipt of four stamps.

JAMES BARTON, IRON WORKS, 370, OXFORD STREET, LONDON, W.

THE LEAMINGTON PRIZE KITCHENER.

These Ranges are strongly recommended for Economy, Cleanliness, and a Cure for Smoky Chimneys.

The Top forms an entire and efficient Hot Plate, and having an Open Fire, removes all the objections of a Close Fire-range.

THE INTERNATIONAL EXHIBITION PRIZE MEDAL, AWARDED 1862
ESTABLISHED 1744.
AUSTIN'S IMPERIAL PATENT SASH
and BLIND LINES
To BUILDERS, CARPENTERS, and BLIND MAKERS
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his
IMPERIAL PATENT FLAX SASH-LINES,
of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

PORTABLE STEAM-ENGINE, 10-horse

SHOW ROOMS, 6, CANNON-STREET, E.C.
London Agents—TREGELLES & TAYLOR.
Manager—JAMES J. TRATHAN, Liskeard.
This Granite is selected for the New Westminster Bridge
DRINKING FOUNTAINS, MONUMENTS, and ORNAMENTAL WORKS supplied, and ARTISTIC DESIGNS suitable to the materials forwarded on application.
EDGE RUNNERS OF SUPERIOR QUALITY.

TISBURY STONE.
The WARDOUR (CHILMARK) and TISBURY STONE COMPANY, Limited,
Are prepared to execute orders to any extent for their TISBURY STONE.—This is a close, fine-grained Stone, of a beautiful colour, possessing all the qualities of the best Portland, in which range it is placed geologically.
It will supply the long-wanted desideratum of the Architect, Builder, and Sculptor, as the Stone is a first-class Weather Stone, easily worked, and carries a fine arris; and is eminently adapted for carved mouldings, high class architecture, and works of art, requiring only to be known to become the
STONE OF THE DAY.
Specimens, Price, &c. may be obtained of
SAMUEL TRICKETT,
General Stone Merchant, Millwall; or at the Offices of the Company, 3, Arcade-place, London Bridge.

HY. GEORGE & COMPANY,
CAEN and AUBIGNY QUARRYMEN and GENERAL STONE MERCHANTS, CAEN WHARF, ROTHERHITHE, S.E.
Seasoned Caen Stone always in Stock, and a large assortment of Sawn Slab in Parkspring, Harehill, &c. &c.
Grindstones, Steps, Slabs, Coping, Landings, Paving, and all descriptions of Yorkshire Block. Cargoes shipped direct from the Quarries.
Prices and specifications forwarded on application.

CAEN and AUBIGNY STONE.
FOUCARD, BROTHERS,
Late P. FOUCARD,
STONE MERCHANTS and QUARRYMEN.
Cargoes shipped to order from Caen to any port. Contracts taken for any quantities.
Office—10, Three Crown-square, Southwark.

W. HOLLAND, Pavior, Mason, and Road Contractor.
Aberdeen, Guernsey, Mount Sorrel, and Hazlr Granite Depôt.
Paving Works done in town or country.
Gravel Wharfs, 67, Augusta street, Regent's Park Basin.

WILLINGTON STONE WHARF,
REGENT'S PARK BASIN.
HY. GEORGE & CO.
The late Proprietor is now conducting the business of the above wharf as the Managing and Resident Agent
(Mr. JOSEPH CHADWICK).
YORKSHIRE STONE of every description, for Pavings, Landings, Sawn Slabs, Headings, Steps, Coping, Sills, Curbs, Silts, and Blocks, in Bramley Fall, Park Spring, Hatch, Robin Hood, Potter Newton, Brettle, and from other approved Quarries.
PORTLAND, Bath, Caen, Aubigny, Forest of Dean, and Grindstones of best quality
GRANITE BLOCK, Street Curb, Trap, and various kinds of Patching, Mount Sorrel Cubes, and Cornwall Granite, generally.
MARBLE SLAB of various kinds, and Blocks of fine quality.
N.B. Wrought Work executed at the quarries as per drawings and instructions furnished.
CARGOES SHIPPED direct from the Quarries, or delivered by barge, or railway and road conveyance, at moderate charges.
Particulars furnished by Mr. JOSEPH CHADWICK, Agent and Manager, at his Office on the premises, or by post.

LITTLE CASTERTON FREESTONE.
Apply for prices, &c. to
OCTAVIUS N. SIMPSON, STAMFORD;
and see Specimens at the Yard of
Messrs. PINDER SIMPSON & SONS, 23, Savile-row, London, and at the Museum of Practical Geology, Jermyn-street, W.
This stone (which is a perfect oolite), is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water works, and for the old bonding and restoration of quarries. When first raised work it is necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.

SLATES.—JONES & CO. have a STOCK of SLATES of different sorts, from the best quarries in Wales. SLATS and CISIERNS delivered at any station in quantities of not less than five tons, from their depôts, Bangor, Garston, Saltney, Chester, and Gloucester.
Prices forwarded and estimates given on application.
1, BOLD TERRACE, CHESTER.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand from above or below Bridge, delivered by the yard or per barge. Ballast, screened or unscreened, by the yard or per barge. Stocks Lime, and Old Bricks. Any rubbish delivered, per barge, in any quantity alongside the THAMES.

VIEILLE MONTAGNE ZINC.

THE ITALIAN-FORMED ZINC is much approved of by Architects and Engineers on account of its strength, durability, and appearance. On account of the light framing required, roofs, including framework and fixing, can be covered with it FOR £3 PER SQUARE up to 25 feet span. Sheds of larger span, including posts, 4*l.* per square. Architects are cautioned against allowing anything thinner than No. 13 gauge (20 oz.) to be used. ALL PLATES SHOULD BE REJECTED NOT BEARING, in addition to the Company's name, the words "ROOFING ZINC," and the gauge.

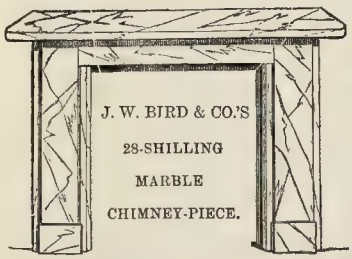
OLD ZINC RETAKEN AT HALF THE MARKET PRICE OF NEW.

For Designs and Estimates for Roofs, with Timber or Iron Framework, IRON CHURCHES COVERED WITH ZINC, and Buildings for the Colonies, apply to

THE COMPANY'S SURVEYOR,
12, MANCHESTER BUILDINGS, WESTMINSTER, S.W.

BATH STONE OF BEST QUALITY.

RANDELL & SAUNDERS, Quarrymen and Stone Merchants, Bath.



List of Prices at the Quarries and Depôts, also Cost for Transit to any part of the United Kingdom, furnished on application to BATH STONE OFFICE, CORSHAM, WILTS.

BATH STONE OF THE BEST QUALITY.

PICTOR & SONS, Quarry Proprietors and Stone Merchants, Bath.

Lists of Prices at the Quarries and Depôts, also Cost of Transit to all parts of the Kingdom, forwarded on application to BATH FREESTONE WORKS, BOX, NEAR CHIPPENHAM, WILTS.

JUROR—Class XXVI.
GREAT EXHIBITION,
1851.

JUROR—Class XXX.
INTERNATIONAL EXHIBITION
1862.

PAPIER MACHE AND CARTON PIERRE WORKS,
49, RATHBONE PLACE, W.
GEORGE JACKSON AND SONS
(Established in 1760)

Beg the attention of Architects, Builders, Decorators, and the trade in general, to their large assortment of Enrichments for Ceilings and Cornices, in the Gothic Elizabethan, Italian, Renaissance, Louis XIV XV XVI and many other styles; also rich or simple Panel Decorations, Elizabethan and Gothic Dados, Door Cops, Mouldings of all sizes, and to their varied selection of Centre Flowers for Ceilings, Gothic Bosses, Trusses, Column and Pilaster Caps, all executed in the highest style of art.

The large and lengthened experience of GEORGE JACKSON and SONS in decorations of Drawing and Dining Rooms, Libraries, &c. for private houses, or public buildings, many of which they have had the honour of executing under Architects of the highest eminence, enables them with confidence to direct notice to that branch of their business.

Upholsterers are invited to inspect the large variety of Glass Frames, Tables, Cornices, Screens, Candelabra, &c. The large extent of their works, and the recent adoption of steam-power and machinery, enables them to offer very superior advantages in materials and speed, while for design, quality, relief, and finish, they flatter themselves they stand unrivalled.

DESIGNS MADE FOR ANY WORKS
PAPIER MACHE AND CARTON PIERRE WORKS, 49, RATHBONE PLACE, LONDON, W.

LITHOGRAPHED DESIGNS OF CEILING FLOWERS, &c. SENT FREE ON APPLICATION.
PATENTEES OF THE CANVAS PLASTER.

The Builder.

VOL. XXI.—No. 1081.

"Going Along."
Salzburg. Insbruck.

FROM Vienna we return to Salzburg, in order to get to Tyrol, and so into Italy, but this time by rail. To go *up* the Danube would be a very long affair. Going along we have an occasional sight of the river here and there. Mölk and its large monastery, which we saw when going down the Danube, come into view; then Amstetten, Enns, where we once more hear of the Cœur de Lion, the walls having been built with his ransom-money; the large monastery of St. Florian, Ebelsberg, where the French and Austrians fought in 1809; Linz; and then on to Salzburg by a line we have already travelled.

The beauty of the position of Salzburg cannot be exaggerated: it passes description. The castle crowning the hill, with the church at the foot, splendid mountains around covered with verdure, the Salza winding through green meadows, which are spotted with villas, and varied with occasional rocks, are some of the features of the truly lovely scene. On the journey to this favoured spot, by the way, one cannot but be struck, as a *per contra*, with the horrible love of whitewash that everywhere prevails, and renders each building a sharp spot in the landscape.

In Salzburg Mozart was born, and *Elixir-vitæ* Paracelsus died. Two houses are marked prominently with the great composer's name; one as his birthplace, the other as his dwelling for a time on his return from London; and a good statue of him, by Schwanthaler, has been set up on a pedestal in his honour. What honour could be too great for the man who bequeathed to the world "Don Giovanni," the greatest opera ever written (and *opera* is Latin for work, let us remember), and a pure and elevating enjoyment for ever? It must be consoling to some, though saddening to more, to remember that the merit of this wonderful work, when first produced,—it was in Vienna,—was not recognized: it was received with the greatest coldness. It takes time to grow up to what is much above us.

The interior of Salzburg Cathedral, an edifice in the Italian style, ranging in date from 1614, or perhaps a little earlier, to 1628, startles by its size and the grandeur of its lines. Scamozzi, when travelling in Germany with the Venetian ambassador (an event in his busy life), had made the acquaintance of the Archbishop of Salzburg; so, some years after, when a new cathedral in that city was needed, the archbishop invited Scamozzi from Venice, where he then resided, to consider the project and make a design. Scamozzi went, then returned to Venice, and occupied himself during three years in the work, making complete drawings and a model. As was the case with many of Scamozzi's *projets*, the designs were carried into execution by another; but, it is understood, this was done very faithfully. Scamozzi himself (born in 1552) died in 1616. This church, a Latin cross in plan, the chancel and transepts having apsidal ends, is 466 feet long and 109 feet in height. Just compare these dimensions with those of churches that occur to you. The nave alone has aisles, and there is an octagonal cupola at the junction with the transept. Over each main arch in the nave, and at intervals throughout the transept and chancel, is a handsomely-carved balcony, a striking feature. The organ is divided over the three west windows. The characteristics of the interior, with sufficient variety in the composition, are dignity and harmonious simplicity. Scamozzi, though a weak, vain man, was an architect of no ordinary ability.

As we came out from the church (the iron railing, it may be noted, as showing that the works were going on for some years, bears the date of 1675), we found resting in front a carriage containing a peal of five new bells, bedded on flowers and ferns, on their way to some church tower at a distance. The bells were ornamented very handsomely with Gothic borders, blue and red colours, and inscriptions; to the eye remarkably good specimens of German bell-founding. One bore the very disputable words, — "Nemo venit ad veniam qui nescit amare Mariam;" another, the more common inscription on old bells, "Mortuos plango vona vis requiem;" and so forth.

Through part of the rocky hill on which the castle stands a lofty passage-way, more than 400 feet long, was worked a hundred years ago by order of Archbishop Sigismond,—an undertaking of which more was thought then than in these Alp-boring and tunnel-driving days. A charming picture is obtained looking through it. An ornamental frontispiece is formed in the natural rock, and three Latin words remind the passer-by that the rocks speak to us. Shakspeare had earlier written of sermons in stones. The rocks do, indeed, tell a story to all who can read them,—a wondrous story; they do, indeed, speak to all who understand their language. And what part of Nature does not speak? Göethe calls Nature "the living visible garment of God;" and Carlyle writes finely when, with a similar idea in his mind, he terms Nature "the time-vesture of God, that reveals him to the wise, and hides him from the foolish."

As we are so far out of the town, we will take our readers on a couple of miles farther to the Château of Hellbrunn, to see Nature mimicked and travestied. The house itself is decorated with odd, mad pictures of birds and animals; but the real lions are the water-works, which are let off at stated hours for public delectation. These pipal caprices and fluid fancies of an archbishop who lived in 1613 are very varied. In one place we have a grotto wherein it rains, and we get a rainbow; while along the pathway leading from it is an arrangement of jets placed, obliquely, so as to thoroughly wet every one who leaves it. The most elaborate of the devices shows a miniature town, with scores of figures variously employed, which are all set in motion by water. Carpenters are roofing in a house, coopers are making butts, harlequin is playing his antics, and an old woman deprecatingly shaking her head. A little farther on, and an arrangement is reached which must have led to bad blood, and in fighting times, one might expect, to frays. Stone seats are arranged around a table: the refection has perhaps been served to the guests; when, suddenly, from a hole in the centre of each seat, spouts out a flood of water, and any attempt to escape by the pathway is cut off by other jets, placed along it. Specimens of more costly trifling and elaborated littleness it would not be easy to find. One would sooner suppose the whole the work of some enterprising plumber anxious to show his manipulative power over piping, than the wit in lead of a learned archbishop.

All who go to Salzburg are urged to visit the salt-mines in the mountain called Dürrenberg, close to Hallein hard by; and though little real information is to be got by the visit, the excursion is so novel and amusing that it should be made. A full account of such a trip might be thought out of place in these jottings, but we are tempted by the recollection of the day to say a few words about it "going along." Broadly, we may observe, the salt is obtained by forming a chamber in the right stratum of the mountain, filling it with water from a stream above, allowing the water to remain there until it has dissolved away sufficient salt to turn it into brine, and then letting it out at the bottom to be conveyed by wooden pipes to the evaporating house, sometimes a long, long distance off. The mountain is pierced in all directions with galleries and chambers, at different levels, communicating by means of inclined planes, at an angle of from 45 deg. to 70 deg., formed of two smoothed planks, placed side by side about a foot apart. The visitor, in proper attire, which includes a stout leather apron put on *behind*, and a thick glove for the right hand, sits between the planks with one leg over each, holds with his gloved hand and under his arm a rope affixed to the side of the excavation, and with his left hand a candle, and then straightway slides down rapidly or slowly, just as he pleases, from the top to the bottom. Five of these inclines took us about 800 feet down; two of them were each of greater height than the Monument on Fish Street-hill, that is over 200 feet; and the galleries which lead to these inclines, and ultimately out of the mountain at the bottom by a tramway and wooden horse, drawn rapidly by a boy, are about 2½ miles in length. The one chamber that we saw, partially filled with water, and lighted to a certain extent with candles, was 180 feet in length and 150 feet wide, without any support to the flat stratum of the mountain forming the roof of it, and of such chambers or "squares," it was said, there are twenty-seven in the mountain. Why they do not tumble in is a mystery. Accidents, it is admitted, do sometimes occur: the marvel is that they are rare. The galleries, little higher than a man, are strutted with timber and boarding throughout their whole extent, the sides inclining to the top. Some of these timbers crush slowly, and in a few years are taken out, and are replaced with others.

The drive up the mountain from Hallein to reach the entrance to the mine is performed in a chaise for two persons only, by horses used to the road, which is remarkably steep, and where, if we may judge from the stations and praying-places on the way, accidents enough have happened in the four or five centuries during which these mines have been worked. In parts the horses have literally to go up stairs, formed of unhewn trunks of trees laid transversely.

Leaving Salzburg, charming Salzburg, we take to the rail for *Innsbruck*, the capital of Tyrol, by way of Rosenheim and Kufstein, with its old fortress on the banks of the river Inn. Nearer to Innsbruck, on this line, stands Schloss Ambras, where was formed the fine collection of armour now in Vienna, mentioned in our last chapter. The latter part of the journey is grand: the grey bald crests of the more distant range of mountains are seen rising high above others in the foreground, and cutting, sharp and clear, against the deep blue sky.

The wide main street of Innsbruck (the bridge over the Inn gives the town its name) is one of those things that once seen cannot easily be forgotten. It is not that the quaint houses and churches forming it have fine verdure-covered mountains for a back-ground, but that the mountains seem positively a part of the town itself, overhanging and dominating it. They are found to be some distance off, if an attempt be made to walk to them; but their height and form are such, aided, perhaps, by some peculiar effect of light, as to produce the striking appearance alluded to.

The great object of attraction in the city, in an artistic point of view, is the monument, though not tomb, of the Emperor Maximilian I. in the principal church there. Every one knows of this unique and very remarkable monument; but it is not every one who has an idea of the grand effect produced by the

twenty-eight bronze figures, about 8 feet high, the cost of which, in the present day, we might put at 1,000*l.* apiece, standing fourteen on each side of the church, guarding, as it were, a marble sarcophagus in the centre, and on which there is the twenty-ninth statue, being an effigy of the Emperor himself. They form an audience to preach to of themselves. These statues, executed in the first half of the sixteenth century, give minute representations of the costume of that period, although the persons figured lived at various times; as, for example, Godfrey of Bouillon; the Kaiser Rudolf, founder of the Habsburg dynasty; Theodoric, king of the Goths; and Arthur, king of England! The dresses of some of the female figures are wonderfully elaborate, and the whole, though not great works of art, have a certain amount of grandeur and power. Less limited admiration must be expressed in speaking of the series of marble bas-reliefs which adorn the sides of the sarcophagus, and are signed, "*Alexr. Colinus Mechliniæ, Sculpt.*, 1566." These reliefs represent events in the life of Maximilian, and are the finest things of their kind to be seen. The representation of a picture in marble, of figures and buildings on different planes, is a misapplication of the art and the material, and, moreover, is usually very unsatisfactory in effect. In the present case, although the objection remains, the difficulties are overcome in a remarkable manner, and works of most rare beauty are the result;—the Marriage with Mary of Burgundy, for example, the Coronation of Maximilian, and the group showing the Alliance of Maximilian, the Pope, the Duke of Milan, and the Doge of Venice. This Colin was an artist of no common merit. A portrait of him, dated 1562, hangs at the back of the monument. In the same church is Hofer's monument, 1809; and in a chapel upstairs are some clever bronze statuettes, and the tomb of the Archduke Ferdinand II., with some more of Colin's work; but we are not attempting to write a guide-book. The interior of the church is of poor architecture, with attenuated Ionic columns, finished about 1560. The lofty marble porch externally is interesting, as showing that we are approaching Italy.

The far-projecting water-spitters, of metal, at the four angles of the tower in the main street, close by, are noticeable; as is the cry of the watchmen here, who, like our "Charleys" of old, call, during the night, "two hours," "three hours," and so forth, as time goes on. And Time does go on,—inexorable Time,—at Innsbruck as everywhere else; quickening his steps, whether they be on roses or in stony places, with each succeeding year of life, until we find ourselves, burdened with the memory of "things incomplete and purposes delayed," where time avails us not.

BRITISH ARCHÆOLOGICAL ASSOCIATION IN YORKSHIRE.

The Leeds congress of the British Archæological Association has passed off most successfully: the week was spent equally agreeably and usefully. Lord Houghton, the president, made an excellent address. In the course of it he said,—Wonderful indeed was the position of man when we came to think of it,—wonderful the position of every man on this globe, standing as he does upon one point of time, with an eternity on either hand of him,—and wonderful—more wonderful still, is it that, limited as are his faculties, finite as are his perceptions, he is nevertheless endowed with the power of investigating the past history of the world which he inhabits, thus showing the conquest of mind over the inferiority of matter. How does he do this? How was it that men had the power to throw themselves back into this infinite distance? It was by archæological remains; it was by the visible fragments which the archæologist puts together, and from which he draws deductions. The earth itself, this planet we inhabit, had its own archæology, and the archæologists of this planet and the geologists, who find in each separate stratum the signs and certain proofs of the great changes which it has undergone during a series of ages, are able, by the fossil remains of former generations of animals, to discover and trace the history of this planet ages and ages before all power of historical recollection. Thus it was that, when an American geologist discovered in Connecticut the impression in the fossil of an enormous bird, that impression, although the bird was far larger than anything ever known or ever heard of as existing on the surface of this globe,—that impression became itself an archæological remain showing the certainty of the existence of a former world in which those animals lived. Then, again, it was only the other day that another fossil bird was found in Bavaria, and brought to the British Museum, on which Professor Owen discovered with the microscope upon it a very feather, actually existing upon it, with which it had floated through the air perhaps a million years ago. Such were the archæological remains of our planet. And then to come to what might be called still nearer times, to the archæology of the antiquity of man. They had all heard of those flint-heads which had been tossed about from time to time, simply considered as curious pieces of stone, and yet which, by modern science, had been discovered to afford clear and certain testimony of the habitancy of this earth centuries and centuries before all historical notice. And thus, also, had been discovered in the lakes of Switzerland and Denmark, and lately in those of Scotland, remains of large villages, and even towns, almost planted, as was Venice in later times, in the midst of the water, and which, therefore, must have existed in times before those lakes submerged those valleys, and thus showing the existence of large populations over the face of Europe long before any recognized historical period. To be real antiquaries, to take any pleasure in antiquities, two or three things were absolutely necessary. First, there must be a reverential respect and regard for the past. Now, it was by no means certain that that respect for the past was in any degree inherent in all portions of human nature. His friend, Captain Burton, had told him, that he knew a tribe of savages in Africa who lived actually in the present,—who had no past whatever. No man ever recorded a thought of anything beyond his own limited memory, or the limited sphere of his own experience. They could not tell him who their grandfathers were, and as for their great grandfathers, they never heard of such things existing. Eastern nations seemed to have been endowed with a special gift of reverence for the invisible, and for all that came within the sphere of human knowledge and without the sphere of human sense. Thus it was in the East they saw great reverence for the dead; vast sepulchres and immense reverence for all sepulchral observances, and the retention from long generations of sepulchral monuments. And thus it was there were now being dug up from Nineveh the records of those wonderful cities, unimportant as they appeared in themselves, in a great degree, but, nevertheless, carrying with them, no doubt, an especial sense of reverence and permanence to the generation which executed these monuments of their history and of themselves. This feeling, they knew, culminated in Egypt, which, as they were aware, was an immense necropolis, while the temples were sculptured with records of the past, and even the mountains were filled with urns containing the remains of the most inferior and unimportant animals, striving to give a sense, as it were, of perpetuity to what was essentially mortal and transitory. Thus it was that these great nations and great empires had in a great degree preserved such a religious, such a devout reverence for the past among mankind. He was sorry to say that the feeling of disregard for the past, and a want of care for the records of that history in which we were not ourselves taking part, had been very prominent in this country down even to a very late period. No country in Europe possessed a more complete and interesting series of public records than existed at the present moment in Great Britain; and yet he remembered, on inquiring in Parliament, he found that the public records were bound together, with very little regard to order, in six different depositaries and tenements, one tenement being more dangerous than another. At that time all the interesting records of the English Chancery, going down to the very earliest periods, were housed in the Tower, contiguous to a steam-engine, which was steaming and bellowing below them, and running the risk every hour of destroying them by an accident. This, however, was being remedied. Collecting itself was a very useful thing. Never stop a child who has a taste for collecting anything. Boys collecting birds' eggs, or girls placing seaweed in a book, are laying the foundation of study in natural history. The collection of even unimportant, trumpery things, showed two things—a love of order and an interest in some external objects. But, besides collection, they must have the spirit of criticism—the power of determining whether things were right or wrong, whether they were true or false; and archæology was only a curious amusement, unless accompanied with the spirit of serious, accurate, and merciless criticism. Archæology was the rectifier of tradition, whether written or spoken. The more they investigated tradition, the more uncertain did they find it as a guide to truth. Tradition was no proof whatever, even of an original truth of any kind. At the present moment, the study of archæology was especially interesting, because it was in full accord and agreement with the development of historical criticism, for which the time in which we live was so remarkable. Besides all these qualifications, the archæologist needed knowledge and taste to understand the different styles of monuments discovered, and to trace the different processes of art, in coins, gems, music, sculpture, and architecture.

In the evening the mayor and corporation entertained the president and members of the Association at a *conversazione* in the Victorial Hall. At nine o'clock the members of the society and others of the invited guests assembled in the Civil Court, where papers were announced to be read. Lord Houghton presided, having on his right the mayor. The first paper was one read by Mr. O'Callaghan, on the mace of the borough of Leeds. This emblem of municipal loyalty was made in 1694, by a goldsmith named Arthur Maingee, who was hanged in 1696 for clipping and counterfeiting the coin of the realm.

Subsequently, Mr. G. R. Wright, F.S.A., read a curious petition, addressed by the inhabitants of Leeds to Oliver Cromwell, praying for a new charter of incorporation for the borough.

On Tuesday morning, two omnibuses, conveying members of the Association, left the Queen's Hotel on a visit to Adel Church and Ilkley. At Adel, Mr. E. Roberts pointed out objects of antiquarian interest. The church belongs to the earliest Norman period, and the first recorded date of it is 1210. The porch, which is a most interesting portion of the building, is in a perfect state of preservation. The nave, he said, was 47 feet 6 inches by 21 feet 6 inches; and the chancel, 25 feet 9 inches by 18 feet, the walls being about 3 feet thick. A most interesting feature in the edifice was the porch, which was in a most perfect state of preservation, and one of the most beautiful with which he was acquainted, from the sculpture and symbolical figures it exhibited. He considered the church was erected in the earliest Norman time: it was possible that it was built upon the site of a Roman temple or of some other Roman remains, but neither a church nor priest at that spot was mentioned in Doomsday-book; which, though not conclusive, was negative evidence against the previous existence of a church. The earliest recorded date that he had yet found was about 1210, when the church was held by Wm. Mustill the younger, whose father gave lands to Kirkstall Abbey. The porch, chancel arch, and corbel table were probably of a slightly later period than the church—probably of the time of Stephen. The Rev. G. Lewthwaite expressed his opinion that the church was older than the twelfth century, and he gave a brief explanation of the symbolic character of the porch.

At Ilkley Mr. Gordon Hills officiated as expositor of the antiquarian objects in the church. The so-called runic crosses, which are interesting objects in the churchyard, are in a state of much dilapidation, but sufficient remains of their inscriptions to prove that they have no claim to Scandinavian origin. Mr. Hills considered them to be of no earlier date than the twelfth century.

At the evening meeting, Mr. Forster, vice-president, in the chair,

Mr. T. Wright read the first paper, giving an account of Anglo-Saxon jewelry and other articles discovered by the late Lord Londesborough at Seamer, near Scarborough. He observed that the discovery of these articles illustrated in a striking manner the remarks of their president in his inaugural address respecting the importance that often attaches to objects that are apparently valueless. The men at work in the lime quarry at Seamer found some small pieces of metal, which they supposed to be brass, and gave them to their children for playthings. The mother of some of the children, thinking the pieces of metal might be worth something, offered them to the station-master for 1s. He refused to purchase, but she succeeded in bartering them with a grocer

for a pound of tea; and they were afterwards offered to the late Lord Londesborough, who purchased them for one guinea. On examination they proved to be gold ornaments of Anglo-Saxon origin, and this led to further research. They have already added a very important circumstance to the history of that interesting neighbourhood. There can be no longer any doubt, not only that there was an Anglo-Saxon settlement near Scarborough, but that it was one of importance, and that it consisted of families of greater wealth and splendour than usual in this part of the country.

Mr. Planché then read a paper "On the Badges of the House of York," being the sequel to a paper read at a former meeting of the Association on the Badges of the House of Lancaster, thus completing the history of the badges of the royal family of England. He prefaced the subject with some remarks on the nature and use of badges generally, which were, he observed, in many instances the first armorial bearings displayed by the assumer; but as heraldic devices became more complicated, it became necessary to select from the family coat of arms some simple and striking mark to distinguish the retainers and servants; and this badge in later times was engraved on metal plates and fastened to their arms, as we see badges now worn by firemen and watermen. To the household badge properly belonged the *cri de guerre*, or motto (*mot*) of the family, now, as Mr. Planché said, absurdly placed under the shield of arms, whereas the object of the badge and motto was publicity. The household badges or cognizances of the House of York, according to a memorandum in the Digby MS., consisted of ten, viz., the falcon and fetterlock, the falcon with a maiden's head, a white rose, a white lion, a black dragon, a blue boar, a white hart, the sun in its splendour, a black bull, and a white hind. Mr. Planché proceeded to trace the origin of these emblems so far as it is known; but in most cases it is involved in great obscurity. After an elaborate examination of various authorities, and considering their respective claims to authenticity, Mr. Planché concluded by enforcing the value of the study of the heraldry in the elucidation of historical facts.

The next paper was by Mr. N. S. Lawson, describing the various Roman remains at Aldborough, the Isurium of the Romans, which has been called the British Pompeii, from the great number of interesting relics that have been discovered there.

On Wednesday the members of this Association went by special train to Boroughbridge, and proceeded from thence to Aldborough. In the evening a meeting was held in the Philosophical Hall. Lord Houghton presided. A letter was read from Mr. Pettigrew, regretting his inability to be present, and announcing, for the information of the society, that the celebrated forger of antiquities at Bridlington had been sent to prison for a month for stealing jet to make his seals. The Rev. C. H. Hartshorne read a paper on "The Honour and Castle of Pontefract," at the close of which the chairman moved a vote of thanks to Mr. Hartshorne. He regretted that the lecturer had not dwelt at greater length on the architecture of the castle, some portions of which existed, and had been the scenes of important events in history. There was, amongst other portions, the chapel in which, in the time of Henry VIII., the Archbishop of York was murdered at the altar. As to the name, he thought it was quite clear that Pontefract was a translation of the popular and original name Pomfret, and meant broken ridge. There being no river or bridge at Pomfret made it difficult for them to see how there could be a broken bridge. The ancient name of the place was Kirby, and the name of Pomfret was given to it by Robert de Lacy. Whether he gave it that name in consequence of having a castle of the same name in Normandy, which he thought was the real reason, or in consequence of a bridge over the Aire, two or three miles off, having been broken down, it was not for him to determine.

On Thursday a large party, led by the president, went to Wakefield, and thence to Pontefract. At the railway station at Wakefield they were met by the mayor and corporation, and the party thus strengthened visited, in the first instance, the Chapel of Edward IV., built on the bridge over the Calder, which at that point spreads out into a wide stream. The chapel was built by Edward IV., on the site of a former one, in memory of his father, Richard, Duke of York, and those of his party who fell in the battle of Wakefield. The fine old parish church was visited, the spire of which has recently been restored. The chancel, erected in the reign of Henry IV. by Sir John Pilkington, particularly attracted attention. The members proceeded from the church to the town-hall, where their official reception by the corporation took place.

Mr. F. R. Wilson read a paper on the ancient chapel on the bridge, and, after the exhibition of some antiquarian relics, the party left Wakefield by the railway train for Pomfret, by which name, under the correction of the President of the Archæological Association, the borough he represented must now be known. They first visited the Old Hall, supposed to have been commenced in the reign of Elizabeth, as a residence for the Harewood family, but it was never completed, and it remains a fine premature ruin, which attracts much observation. After a short visit to the church the party repaired to the castle. The ancient glories of Pomfret Castle are most incorrectly symbolised to the present generation by the representation of its gates, with a dove perched on the top, impressed on that most refined of all preparations of liquorice, "Pomfret cakes." The gates there shown bear no resemblance to any part of the remaining structure, and the bird of peace is a most unfitting emblem of the deeds of murder and bloodshed perpetrated within its walls. Lord Houghton directed attention to those portions of the building which have most historical interest, and the Rev. Mr. Hartshorne pointed out the chief architectural features, though there are now few remains of this once famous fortress. It stands on a high hill, and the most perfect parts that are visible are the walls of the keep, which, being of extraordinary thickness, have best withstood the ravages of the destroyers who have worked its ruin. The whole area occupied by the castle was seven acres, and it is now chiefly used for growing liquorice, for which purpose the great depth of soil renders it peculiarly suitable. The archæological objects of the excursion having been completed, the members proceeded to the Town Hall, where a collation had been provided by the corporation. The Mayor presided, supported by Lord Houghton and Dr. Lee.

At the evening meeting, Mr. Gordon Hills read a paper "On Fountains Abbey," which was illustrated by a large ground-plan of the building, the various parts of which he explained. To give more extended interest to the subject, he exhibited plans, drawn to the same scale, of several other distinguished Cistercian monastic establishments, including several of those in Ireland, which were all of much smaller dimensions than the English monasteries. The paper was followed by a discussion, in which Mr. T. Wright, Mr. Hartshorne, Mr. Planché, Mr. O'Callaghan, and Mr. Roberts took part.

A paper by Mr. Cuming, "On Weapons of Ancient Tribes of Yorkshire," was read in his absence by Mr. George Wright.

On Friday the members went to Ripon. Before reaching the cathedral they called at the small church of St. Mary Magdalen, in the suburbs near the railway station. It was built in 1132, and enlarged in the fifteenth century, though the extent of it now is so limited that it must have been a very small edifice indeed when first called into existence. It was then used as a chapel for the adjoining hospital for lepers, which was founded when leprosy was one of the ills which flesh is heir to, in days since which centuries have intervened. Afterwards it was a chapel used by a lay sisterhood for their devotions; and now it is considered an appurtenance to the women's hospital, close at hand. Divine service is weekly performed in it by one of the minster clergy; and the income is stated to be 1,400*l.* a year. The chapel has in it one of the few high altars of stone which exist in this country. In front of the altar there is a Roman or Anglo-Roman pavement in good condition.

At the cathedral, Mr. C. E. Davies pointed out the peculiarities of the architecture. He thought the principal part of the nave had been built from 1154 to 1187, though some parts of it were earlier; and towards it Roger, archbishop of York, had been a large benefactor, as well as towards the aisles and central tower and transept; and as Roger had been at Canterbury, where considerable improvements had been going on, it might be supposed that he was skilled in the art. Throughout the building the capitals had hollows underneath to produce a square, which was very unusual in Norman columns, and was not met with in the south of England. The transept was of the same date as the nave, but he thought it was designed at a different time. The roof was modern. In 1660 a spire fell and destroyed the original roof. It was said the tower fell, but he did not believe it, and that it was only felt necessary to strengthen the tower, or intended to construct a larger one as was seen at Worcester. At the same date the screen was erected, and it was a beautiful work, worthy of careful examination. He had been led to understand that in restoring the fabric it was intended to raise the height of the eastern gable and pinnacles.

The Dean said the gable and pinnacle were only to be restored to the original height.

Before leaving the cathedral, Mr. Planché said there was a recumbent effigy of a knight and his lady, the knight appearing in a suit of armour of the time of Edward III.; but he thought the effigy itself was as late as the time of Henry IV. But it was remarkable that about the neck was a collar showing park palings with a deer-lodge put into it. This was a very curious thing, and to many eyes it would appear to be a portcullis. Now, this was the special badge of the town of Derby, and he had no doubt that the knight (Sir Thos. Mentville) was a man in the service of Henry IV. This was the only instance he had ever seen of that particular badge on a monumental effigy.

The party were conveyed to Fountains Abbey, where they were received by the Earl and Countess de Grey and Ripon.

Mr. Gordon Hills conducted the visitors over the ruins. He explained their former uses, and suggested many interesting probabilities.

At the usual evening meeting, the first paper read was a long one "On Harewood Castle," by Mr. John Jones.

Mr. O'Callaghan exhibited a selection of historical autographs, and read some letters of celebrated personages of past times.

Mr. T. Wright read a paper by Mr. John James, of Bradford, "On the Little British Kingdom of Elmet." It was stated in the paper that when the Roman legions had been withdrawn, and nearly the whole country lay at the mercy of the Anglo-Saxons, there existed in the heart of the West Riding of Yorkshire a little State called Elmet, which maintained for nearly 200 years its independence. It was probably enclosed on all sides by the kingdom of Deira, which included the whole of the other parts of Yorkshire. This "Regiuncula" of Elmet, as it has been called, probably remained, in regard to inhabitants, religion, and manners, much the same from the time when the Romans quitted this country until the year 616; Leeds being the capital of the little kingdom.

The Rev. W. C. Lukis next read a paper "On Cromlechs," which was illustrated by a number of drawings taken by himself. Mr. Lukis said that archæologists are now agreed that cromlechs are stone chambers made for the purpose of sepulture, and that the notion formerly entertained, that they were places for human sacrifices, has been exploded. There are, however, several points regarding them on which antiquaries differ, the principal of which is whether cromlechs were originally left exposed as they are now often seen, or whether they were covered with earth, forming tumuli. Mr. Lukis is strongly of opinion that all cromlechs were covered originally with earth. An interesting discussion took place on the subject, in the course of which the Rev. Mr. Hartshorne dissented from Mr. Lukis's opinion, which was supported by Mr. T. Wright, who, in reply to a question from Lord Houghton, observed that the circles of stones often seen were not intended for cromlechs, but to enclose consecrated ground.

In the visit to Kirkstall on Saturday morning, Mr. Roberts conducted the party to the abbey, and delivered a short lecture upon it. These ruins are kept in a good state of preservation.

IMPERFECT REPRINTS OF WALPOLE'S "ANECDOTES OF PAINTING, &c."

I wish to call the attention of readers who live more especially in the realms of literature and art, to the *imperfect* reprints that have been made since Walpole's death of Walpole's well-known work, entitled, modestly enough, "Anecdotes of Painting, &c., in England." These reprints (professedly such) were given to the public from the shop of the late Mr. Major, in Fleet-street, as revised and annotated (1826), under the editorial care of the Rev. James Dallaway; and from the shop of Mr. H. G. Bohn, in York-street, as re-revised and re-annotated (1849), under the editorial scrutiny of Mr. Wornum, the present keeper of our National Gallery. The purchasers of these costly reprints (more especially those who have gone to the cost of giving them elaborate covers of Russia or Morocco tooled to a nicety by a Lewis or a Hayday), will be surprised to learn *for the first time* that the text of both reprints, typographically excellent in many respects, is

faulty beyond parallel; that neither reprint represents the text of Walpole; that Dallaway sent a faulty text to Mr. Nicol, the printer, in Pall-mall; and Mr. Wornum a faulty text to Mr. Clay, the printer, of Bread-street-hill: in short, that the two reprints made since Walpole's death of Walpole's great work are shamefully deficient in whole pages of valuable *Walpolean* matter, and that the true text of that storehouse of anecdote, Lord Orford's "Anecdotes of Painting," can only be consulted in its integrity in the quarto edition of Walpole's works—partly printed by Walpole in his lifetime at his private press at Strawberry-hill, and finally given to the world at the close of the last century by Mr. Berry and his two accomplished daughters, known for fifty years in fashionable and literary circles as Old Berry and Elder Berry.

My *rough* collation of the Wornum Bohn and Clay reprint of Walpole's work with Walpole's own text exhibits a charge of thirty-five articles or passages of omission against the defendants, Messrs. W., B., and C.; and it has appeared to me that the pointing out these omissions *seriatim* would not only prove a serviceable introduction to my "New Materials for the Lives of British *Painters*," but that in reprinting together the omitted passages, the *Builder* would enable the possessors of the faulty editions to make good their text in a neater manner, and at less labour and expense, than MS. additions would alone supply, however neat the handwriting in which they were inscribed.

My first charge of omission against Mr. Wornum begins at p. 6 (the pagination throughout his reprint very usefully runs on). The passage left out relates to a subject so interesting as the discovery of oil painting by Van Eyck.

Walpole says:—

"And Governor Pownall, in the ninth volume of the 'Archæologia' pp. 151, 152, and 154, has produced from the Sacristy of Ely some accounts that are as explicit as possible, that oil was used in the mixture of colours. The first says, 'In tres lagenis et dimid. olei pro ymaginibus super columnas depingend.' The next, 'In 31 lagenis et dimid. olei empt . . . . pro color temperand" (for mixing colours which is distinguishing it from varnish). And the third, 'In oleo empt. pro picture faciend. in capellâ.' Could oil-painting be more exactly described at this day?

1. Oil for painting images on columns, 1325.
2. Oil for mixing colours.
3. Oil for making pictures in the chapel.

Note, too, that the first is dated in the reign of Edward the Second—the last in that of Edward the Third."

Now, this passage, not in Wornum's reprint, is in Dallaway's reprint, but with this error (vol. i., p. 11), for Edward the "Third" of Walpole, Dallaway reads Edward the "Fourth."

P. 20 of Wornum wants Walpole's foot-note at p. 27:—"See the Parliamentary History."

P. 62 of Wornum wants the following Walpole matter to note 4:—

"In the north aisle of the church at Fulham is this epitaph: Hic jacet domicilla Margaretta Svanderg, nata Gandavii Flandrie, quæ ex magistro Gerardo Hornebolt Gandaviensi pictore nominatissimo peperit domicellam Susannam uxorem magistri Johannis Parker archarii regis. Quæ obiit anno Domini M°ccccexxix, 26 Novemb. Orate pro anima."

This epitaph is imperfectly printed by Lysons (Environs, ii. 369).

P. 105 of Wornum wants the following Walpole matter:—

"I have also a matchless portrait of the king [Henry VII.], which seems evidently taken from the life, as strongly representative of his pensive policy; yet it is touched with so masterly a knowledge of chiaro-scuro, that I and better judges conjecture that it was recoloured by Rubens himself."

P. 233 of Wornum wants the following Walpole material touching Solomon de Caus:—

"There is another [book] mentioned in a catalogue called Hortus Palatinus à Frederico, rege Bohemiæ, elect. palatin. Heidelbergæ, extructus: Solomone de Caus, architecto Francofurti. Jo. Tæod. de Bry 1620, in folio Catalogue de Crevenne, vol. ii. p. 246."

P. 250 of Wornum, note 4, omits what follows touching a Jacobean architect:—

"Mr. Pegge says his [John Smithson's] name was not John, but Huntingdon Smithson. Biblioth. Topogr. Brit. No. 32, p. 16."

P. 277 of Wornum lacks the following Walpolean addition to note 3:—

"Farther accounts relative to Gerbier's academy will be found in the second volume of the 'Environs of London,' by Mr. Dan. Lysons."

P. 281 of Wornum wants a whole quarto page of Walpolean text! Here is the omitted matter:—

"To Gerbier, of whom, from what has been already said, no random or contradictory and unauthenticated assertions but may be credible, has been ascribed a small tract printed by authority in 1651 (that is, after the execution of the king), and called 'The Nonsuch Charles, his Character.' It is one of the most virulent libels ever published; and, if written by Gerbier, one of the basest, after his obligations to that prince. The style, the folly, and wretched reasonings, are most consonant to Gerbier's other writings; and several passages mark him as the author, or as having furnished materials. But as curious a circumstance as any would be, that, after such gross abuse of the father, Gerbier should have been countenanced by the son after the Restoration. The fact is by no means incredible, considering how many bitter enemies Charles II. did, or was forced to pardon: and when we recollect that his Majesty, from fear, or from total want of principle, countenanced that notorious villain Blood, it would not be surprising that so worthless a man as Gerbier should have been re-admitted to a sphere whence no odious criminal was excluded.

Perhaps not being rewarded by the new government as he expected for his invective against Charles I., Gerbier, two years after, might write *Les Effets pernicieux*, mentioned in the preceding article, as a kind of preparatory palinody, in case the royal family should happen to be restored. To the second piece he has set his name; and, it being printed at the Hague and written in French, when the Stuarts were in exile, it was probably a peace-offering, or meant to disavow the invention; though, from the extreme similarity of the manner of both pieces, I have no doubt of Gerbier being the father of both."

Is not this in "the old Horatian way" all over? Walpole was constantly scribbling in his books. I had once in my possession his own copy of De Grammont and his own copy of "Lord Herbert of Cherbury's Life" annotated with his own hand.

P. 322 of Wornum wants Walpole's additional note to note 1; add, therefore, to "Lady Carlisle bought by Mr. West:"—

"* And at his death by Mr. Barrett, of Lee."

P. 387 of Wornum should have contained the following note to the words "by himself:"—

"This portrait the Duchess [of Portland] at her death, in 1785, bequeathed to her friend, the widow of Dr. Delany and correspondent of Swift; a lady of excellent sense and taste, a paintress in oil, and who, at the age of 75, invented the art of paper-mosaic, with which material coloured, she, in eight years, executed within twenty of a thousand various flowers and flowering shrubs, with a precision and truth unparalleled."

P. 414 (Inigo Jones). Mr. Wornum has overlooked the note that follows:—

"In 'Hasted's History of Kent,' vol. ii. p. 783, it is said that he [Inigo Jones] built the front of Lee's Court and Judde-house, p. 797. As in the concise account of some natural curiosities in the environs of Malham Craven, 1786, appendix, p. 5, Stonyhurst, the seat of Thomas Weld, Esq., is said to have been designed by Inigo for Sir Nicholas Sherborne."

P. 450-1. Mr. Wornum should have inserted the following note to the word "earthquakes" at p. 451:—

"Of similar absurdity was a tract published in 1781 by one Goodridge, an old seaman, called the 'Phœnix, an Essay,' being an attempt to prove from history and astronomical calculations, that the comet, which, by its approximation to our earth, occasioned the change made at the Fall and at the Deluge, is the real Phœnix of the ancients."

P. 471, note 2. This note is a sad jumble. In its integrity it belongs to Walpole; but Mr. Wornum gives it to Dallaway.

P. 473. Mr. Wornum has again overlooked a Walpole note, touching Wright's famous picture at Hampton Court of Lacy, the actor, in *three* characters—the picture painted for Charles II.:—

"In Dodsley's 'Theatric Records,' printed in 1756, instead of Sandy and De Vice, the other two characters are said to be Teague, in the Committee, and Galliard in the Variety (p. 67)."

P. 529, note 2. Mr. Wornum has *omitted* one half of Walpole's note, and the subject,—Cooper's Miniature of Cromwell:—

"The body [of the miniature] is unfinished. Vertue engraved it, as he did another, in profile, in the collection of the Duke of Devonshire."

P. 549, note 1. Mr. Wornum is guilty of a like omission. He follows Dallaway. Add:—

"He [Cibber] also executed some statues for the library of Trinity College, Cambridge. *Vide* 'Life of Colley Cibber,' chap. iii."

P. 632, note 1. Another Walpolean omission. Add:—

"I have a portrait of him [Vander Vaart], by himself, in water colours, about the former age, uncommonly well painted."

P. 638. A long and good note about Sir John Vanbrugh omitted both by Dallaway and Wornum!—

"Two very good judges and men of excellent taste, Sir J. Reynolds and Mr. Gilpin, have declared their admiration of the stupendous piles of Blenheim and Castle Howard; and, no doubt, vastness is very imposing at a distance: but if the design and details are defective, the merit of grandeur remains with the person who is at the expense of the fabric, not with the architect who executes his commands. St. Peter's, St. Paul's, each strikes as a magnificent whole; but they charm, too, when the parts are examined, nor have any superfluous weight. Large edifices might be erected from unnecessary excrescences of stone that load the palaces above mentioned; and, however admirable Vanbrugh's structures may be in their present state of *perfection*, I will venture to guess that their ruins will have far greater effect, not only from their massive fragments, but from the additional piles which conjecture will supply in order to give a meaning to the whole."*

PETER CUNNINGHAM.

ARCHÆOLOGIC ITEMS FROM ROME.

THE Arch of Constantine has been made the subject of investigation by the Chev. de Rossi, with interesting result, in the course of recent works for executing casts of all the fine reliefs, its borrowed ornaments from the Arch of Trajan illustrating that emperor's public and private life. Minute study was carried out by the learned archæologist, from the scaffold raised for this occasion, on the epigraph repeated at both fronts of the attic,—perfect on the eastern, but much impaired on the western side,—and he was thence led to the conclusion that a favourite theory, as to one part of this remarkable inscription, must be rejected, namely, that the words allusive to Constantine's triumph over Maxentius and the restoration of public peace—INSTINCTV DIVINITATIS—of obviously Christian, or at least monotheistic sense, had been substituted for some other phrase, Pagan in import, after the emperor had declared, more distinctly and officially, his adherence to Christian faith. Such was the conjecture of Venuti, Nardini, and Nibby; and Cardinal Mai (*Script. Vet.*, t. v.) supposes the original words may have been *Diis faventibus*, as dictated by a Pagan senate, but *immediately* afterwards altered by the emperor's desire. Professor Henzen, president of the German Archæologic Institute, has made public the report of an experienced epigraphist, who, after examining the marble surface under this inscription, inferred from the traces of the metal pivots for fastening letters, that the original had been, *Nutu Jovis Optimi Maximi*. Date also has been a subject of dispute in regard to this arch, severally placed in the years 315, 316, and 326; by Tillemont and other good authorities in the first of these years, coinciding with the celebration of the emperor's *decennalia* festival. Eusebius's history, and other authentic documents, show that, prior to 313, Constantine's liberality towards the church and earnest interest in her welfare had been most distinctly manifested; and it is made clear by Baronius, that he conceded the Lateran palace to the Roman Pontiff before the October of A.D. 315, when the Council against the Donatists was held there by Pope Melchiades. De Rossi positively refutes the statements of Venuti and Nibby, as to the traces of erasure in the marble surface under the words in question, and the existence of cavities for pivots not corresponding to the form of letters in the actual inscription in one line; *his* inference being that the *Instinctu Divinitatis* was the formula originally dictated by

* To be continued.

the Senate, *not* with intent to recognize the dogmatic teaching of the Church, but in the idea of transaction (so often exemplified in records of that transitionary period) between the new and the ancient religion. Another fact, ascertained by the same investigator, that the marble blocks on which the entire epigraph is chiselled are all fragments from other buildings, curiously evinces the state of deep decline into which Roman art had sunk at the beginning of the fourth century. One of these marbles belongs to a cornice, with rich and varied mouldings, as seen in the chamber of the attic, where its sculptured side is turned inwards: others present the imperfect words of lost inscriptions: the whole arch (observes De Rossi) "is an accumulation of spoils from earlier monuments, not only in its bas-reliefs and statues, but the very stones of which it is constructed."

The restoration, under Pius VII., of the Arch of Titus, almost deprives it of its antique character, and rests merely on architectonic analogies, for no authentic representation of its original elevation was at hand to guide the modern artist. Of its sculptures, the best preserved, though otherwise least important, are the small basreliefs, on the frieze, representing the procession of the imperial triumph, in which we see the image of an old man, to personify the Jordan, carried on a stage. It is to be regretted that restorers did not restore to its attic the longer epigraph (that less full being still in its place) which was found, buried in soil, near this arch's basement; interesting for the sake of an allusion to the fate of Jerusalem that at the same time expresses the Roman idea as to the importance of their conquest in Palestine; after the names and offices of Titus, proceeding as follows:—"*Quod præceptis Patris consiliisque et auspiciis gentem Judæorum domuit, et urbem Hierosolymam, omnibus ante se ducibus, regibus, gentibusque aut frustra petitam aut omnino intentatam, delevit.*"

The excavations in the Palatine ordered by the Papal Government along the Mount's north-western declivities and basement have lately brought to light several *graffiti*, scratched with a sharp instrument on the stuccoed walls of some roofless chambers hitherto supposed a quarter for troops in the imperial service. These inscriptions are mostly proper names, and after some occurs the designation *verna*; after others, the sentence, *exit de pædagogus*; confirmatory, perhaps, of another view as to the appropriation of these chambers; namely, that they were inhabited by pages brought up in the Cæsars' Palace. One of these names has the strange title subjoined, *episcopus*, which could only have been given in derision, and probably to some youth of the imperial household who had just embraced Christianity. In fact, one of the most striking examples, in the whole range of monumental evidence, of the desire among Pagans to overwhelm the new faith with ridicule, is that found, not many years ago, in the same suite of rooms at the Palatine's western slopes—a caricature of the Crucifixion, in which the Divine sufferer is represented with the head of an ass! referred, in a learned essay on the subject by the Jesuit father Garrucci, to the period of Septimius Severus; to about which date, it is assumed by De Rossi, who has noticed these *graffiti* in his "Bulletino," all the curious records in these chambers may be ascribed.

Among archæologic items, though not immediately pertaining to Rome, may be mentioned here the discovery of an Etruscan necropolis, containing eleven tombs, one adorned by paintings of some interest, near Orvieto, a city and province recently severed from the Papal States. Some works of excavation have been in progress during this year, but not with remarkable results, among the Etruscan sepulchres of Tarquinii. The noble statue of Augustus, found at the villa of Livia, now stands, admirably restored by Tenerani, in the Braccio Nuovo gallery at the Vatican; and it has become a favourite subject for photography. The statue of Faustina, as the goddess Concord, has been transferred to its permanent place in the "Hall of the Dying Gladiator," at the Capitol.*

* Italian art has lost one of its most esteemed practitioners by the premature death of Celentano, a Neapolitan, whose studies had been principally carried out in Rome, and who died here, some weeks ago, at an age scarcely beyond youth. His historic pictures had attracted much notice, both by their conception and vivid effects of colouring. For about a year before death he had been engaged on a large and complicated painting, unfortunately left incomplete, of the siege of the Castle of S. Angelo in 1527, and its defence directed by Benvenuto Cellini, for the details of grouping in which he had been to considerable expense, and made journeys expressly for collecting pieces of armour and costume of that epoch. This work was undertaken by Celentano without commission, and promised to prove his masterpiece.

MR. HOPE ON CHURCH ARRANGEMENT.

At the recent Church Congress in Manchester, Mr. Beresford Hope delivered an address in the Free Trade Hall, on "Church Architecture." After some observation on the churches of his youth, Mr. Hope proceeded to say, a great deal of obloquy and suspicion had been cast on men who had been most forward in the movement of church architecture. Some might have deserved it, but he contended that it was as legitimate a development of the latent energy bursting out of the Church of England as the movement of lay co-operation, or parochial extension, or any other movement in the church which startled the people simply because it was new. He took his stand plainly, literally, absolutely, and grammatically upon the Prayer Book. The model church should not fall below the Prayer Book, neither should it attempt to climb above the Prayer Book. As the Prayer Book was partly new and partly old; as it carried on the old traditions, yet throwing off what was superfluous, what was old and superstitious, and everything that put imagination before truth; so should their churches be found in the old ways and carrying on the old traditions, yet retaining nothing that was not amply justified by their common sense and judgment, and which the Reformation had not left behind. What, then, was the teaching of the Prayer Book respecting church architecture? He should not say anything about style. He assumed that the old English style, the Pointed or Gothic style, as it was called, was, by the common sense of all people, recognized as the most appropriate for the place of religious worship. Taking the Prayer Book in his hand, he asked what did it call for? It called for a house of prayer; for a place in which the morning and the evening services of the church might be carried out; for a place in which the two sacraments of the Lord's Supper and Holy Baptism might be administered and sermons should be preached; where the catechising of the children, and all other occasional Christian rites might be performed. The church was not only the house of prayer, it was also the house of the sacraments, and the preaching house; and it must have all things and everything which that Prayer Book which was to be put in use in that house required to be performed. The first thing required was an area in which the congregation might freely assemble. They must have something to assemble in, something to kneel at, and something to sit in. These might either be square pews, such as their ancestors loved to sleep in; or they might be slits or long pews, such as modern system-mongers loved to rent out; or they might be free pews, where the people might enter without money and without price, where they could kneel down or stand up to worship the Almighty. Their cheers had ratified which of those various expedients he would see carried out. Then there was a certain book called the canons, and these, in accordance with primitive usage, laid down that the font should stand at the entrance of the church, as typifying the admission of the infant to the privileges of the Christian Church. In all the new churches the font stood near the entrance. The canons also said that the font should be made of stone. They had formerly, in some instances that he knew, been made of crockery, and in other cases of plaster. Now, he was happy to say, the stringency of the regulation was felt, and there were scarcely any fonts to be found but what were made either of stone or marble. In some new and restored churches the fonts were very beautiful, and they were generally the special gift of some loving soul. He would then take them up the nave towards the eastern end. Of course, in the nave the ordinance of preaching must be carried out; and this required a pulpit. In the modern churches pulpits were generally of great beauty, sometimes of wood, often of stone, and sometimes of marble. Stone and wood depended on ancient precedent, but marble had been introduced in these times, as it was not quite possible before the development of machinery and the increased means of transport. In the nave—the place where the Litany was to be said—they might or they might not find a Litany-stool. The church of old, however, carried out and embodied the most striking text in Joel about the priests and the ministers "weeping between the porch and the altar," and in their old cathedrals there was authority for this litany-stool. Then they came to a place where "the minister and clerks" were to say prayers. By "clerks" in the Prayer Book was not meant the old fellow who said "Amen," but *clerics*, whether clerks in orders or lay clerks, such as they found in their cathedrals. They knew that in the old churches, before the Reformation, there was a certain portion of the church called the chancel. This word chancel was derived from the Latin word *cancelli*, which meant a lattice. In old times the chancel was screened or latticed off from the rest of the building, as in their cathedral and in others. The Prayer Book said that the chancels were "to be as in times past." It did not mean that it was to be fitted up with comfortable pews for Mr. Squire or Mr. Incumbent; for it would be a prodigious waste of money to build a chancel which was only to be a pew; but it meant that towards the upper end of the church there was to be a raised platform, where the minister and the clerks were to perform divine service. This was the common-sense and literal interpretation of the Prayer Book, and there was nothing more popish in this than there was in his standing at that time on that platform to address the meeting instead of in the middle of the hall. But they would say, if the prayers were read high up in chancel they could neither see nor hear the minister. If so it would be a serious objection against the plan, but—he was speaking of new and not of old churches, in which the chancel is sometimes inconvenient, and the Prayer Book accordingly allows a deviation—their quarrel should not be with the Prayer Book, but with the architect who had been such a blunderer that he could not carry out the directions of the Prayer Book. It was the duty of the architect so to arrange the chancel that the ministers should be better seen and heard there than if they were on a level with the rest of the congregation. It was quite clear that the prayers ought to be said in the chancel, but how? As in some of their new churches, with the clergyman standing right point blank face to the congregation? No doubt that position had its advantages, but it was purchased at the expense of many greater disadvantages. This brought him to the consideration of what the Church of England, as a part of the Christian Church, was. It was not merely a preaching machinery, not merely a praying machinery, but a machinery for bringing God and men together. The ordinance of preaching was carried out in the nave: the ordinance of the Lord's Supper was carried out at the end of the church, where was what the Prayer Book called—and therefore he called it—the "Lord's table," and the "holy table." The Church called upon all worshippers not lightly and carelessly to turn their backs on that "holy table." He contended that it was in accordance with the custom of the Reformed Church of England that the prayers should be said in the chancel, so that the minister should be well heard, yet so that he should not turn his back upon the Lord's table. This was more in accordance with the Prayer Book than preaching the prayers from a tub. He did not say, put stalls like those of our cathedrals in all their churches. In many small churches there would be only one "reading pew" for one clergyman, and in these cases he would say, let it be placed in such a position that the clergyman might repeat the prayers reverently, for it was never seemly, right, or expedient that he should be in an apparent position of disrespect to all the arrangements that the east end of the church might teach, merely for the fancied advantage that his voice would be better heard. In larger churches a desk was used. This desk was sometimes formed in the shape of the eagle which St. John told them carried the everlasting gospel; and sometimes in that of the pelican, which was supposed to feed its young with its own blood, and therefore, by the fervour of a pious imagination, was regarded as typical of the Saviour. This desk, called the "lectern," was not a necessary part of church furniture, but it was nearly always very beautiful, very appropriate, and could not raise scandal in the mind of any but the scandal-monger. Now they came up to the Lord's table. He would advise that the chancel should be made large enough for the communicants and the confirmations; and so, by the mere laws of common sense, they would always have a tolerably big chancel. He did not say, make it big for mere bigness' sake, but let them see what were the wants of the parish, and act accordingly. With respect to the Lord's table itself, the question had been settled in the courts of law, and he would tell them how. It was nearly seven years since the last judgment was pronounced upon this question, by the Privy Council under the advice of the late Archbishop of Canterbury and the present Bishop of London, so that they might deal with it as no longer a party question, but the acknowledged law of the Church. The law had laid down that the Lord's table should be of wood, and movable. It had also been pronounced

that the table might be covered with rich cloths, of different colours, according to the different holiness of the several Christian seasons. The law sanctioned a division between the chancel and the nave, which might be in the form of a high screen with a cross above it. He did not think this was always desirable, but he was telling them what the law sanctioned. Most church-builders were satisfied with very much less. He was stating what the law was: it might not be necessary or expedient always to carry it out. Candlesticks, with candles in them, might stand on the Lord's table, but were only to be lighted when lighting was otherwise requisite. It was also laid down that the emblem of their salvation might not be affixed to the table as part of its substance; but it might be painted, or carved, or somehow attached to the east end of the church in a place of as much dignity and prominence as it might please the authorities to give to it, in as rich a material as might be chosen, and in accordance with the spirit of the Church of England. It was also laid down that there might be a side table in addition to the Lord's table, on which the elements should be placed previously to the administration of the holy communion. Other articles of church furniture had been introduced of late years, which were called *sedilia;* that is, side seats for the clergy near the Lord's table. Now this was merely the Latin name for seats. Formerly it was the custom, and still was in many churches, to seat the clergy in what were called altar chairs, where they occupied a prominent position in the sight of the congregation, and which led to the erroneous supposition that they occupied themselves, at the earlier part of the service, in counting those who came in late, and, at the latter end of the service, told off those who dropped asleep. The old side seats which they found in their old churches would be a much more convenient and much more reverent way of placing the clergy. In the Middle Ages, when they talked Latin, all seats were called *sedilia*, and this was just the top and bottom of this word *sedilia*. There were many other points to which he might refer, such as the bells, and the question of the painted or plain windows, about which much might be said, but with regard to which much, if not all, was left to the taste and wealth of those who were building the church. But he had dwelt so long upon other points that he must forbear. He had merely thrown out general principles, which they might apply to the simplest and smallest, as well as to the grandest and most dignified edifice. Mr. Hope, after a few other remarks, concluded by saying that so long as superstition and idolatry were avoided, he claimed for our mother Church of England the possession of all that was grand, all that was rich, all that was glorious in art, which was God's good gift to man for man's gratification, advantage, and instruction, and of which in the face of the world he said—if God gave it to man in the world, ten thousand times more did He give it to man in His Church, wherein it could be used equally for the gratification of man and for the glory of God, the giver of all good things.

WORKING MEN'S HOUSES.

At the late Social Science Congress, in Edinburgh, a meeting of working men was held in John Knox's Church, Canongate, for the purpose of hearing addresses by members of the Social Science Association on the subject of Co-operation, Early Closing, and the Houses of the Working-classes. The Rev. Dr. Begg occupied the chair, and called on Mr. Henry Roberts, London, to address the meeting on the subject of Houses for the Working-classes.

Mr. Roberts thought that something might be done in the matter by the Legislature. Since Lord Shaftesbury had gone to the House of Lords, there was no member of Parliament who systematically brought the subject of sanitary reform as it related to the working-classes before the House of Commons. He thought electors would do well to draw the attention of their representatives to the subject with the view to obtain the interference of the Legislature. With regard to Edinburgh, he had visited some of the lower and worst parts of the town, and he must say he had never felt more pain than in seeing the condition of the back slums of Edinburgh. He had seen more drunkenness about the streets in these parts of the town than he had seen in any other streets through which he had gone, and he attributed that in a great degree to the miserable condition of the houses.

Mr. Torrens, late Registrar-General of South Australia, next addressed the meeting on "The System of Conveyancing in use in South Australia." He referred to the system in use in this country, which he described as acting as a drag on the acquirement of land by poor men, and gave instances in which men purchasing property of the value of about 140*l.* had to pay between 30*l.* and 40*l.* when they wished to sell or transfer their possessions. A man selling a possession went to the man who was going to pay him for it, and gave him a paper in which he said, "I hereby transfer all my lands to So-and-so," and signed his name to it in presence of a notary-public or in the registrar's office, and the whole transfer was completed without the intervention of a lawyer at all. An equally simple system was in use for effecting mortgages.

Mr. Edwin Chadwick thought every British labourer was entitled to live—and most of them might live—the full threescore years and ten. He was convinced that if the working-man was deprived of them it was because of carelessness of one kind or another. He was satisfied, and they had proved it by experiment, that one-third of the working-man's life was cut short by ignorance of sanitary principles in matters of house drainage. By giving the working-men good dwellings they had already reduced the rate of mortality among them by one-third; and by further improvements they would be able to reduce it by one-half. One proposition he had made some time ago was the appointment of an officer of public health, whose duty it would have been to have examined the causes of disease, and to have effected their prevention. That proposal had been defeated in Parliament, but it could, he believed, be adopted by societies of working men. To illustrate the advantage of such an appointment, Mr. Chadwick stated that some time ago the Post-office authorities had been much puzzled to know the reason of the prevalence among the letter-carriers of rheumatism, but on investigation by a medical officer it was found that the cause was the wearing by the men of the Macintosh cape, which caused the absorption of the sweat. Now, a doctor treating an individual case of rheumatism would very likely have traced the disease to some other cause, but when treating a whole class, he was able to find out the true cause of the disease and to point out the remedy. He suggested that each club or association should have a doctor, and when a member died the doctor should examine as to the cause of death, and see whether it was caused by illegal means, or by causes known to be preventible—and should be bound to protect the surviving members of the club from the operation of such causes. He believed if such a system were set on foot it would be found that many houses were dangerous to a degree that was illegal. He did not know what the Scotch law was, but in England a proprietor was responsible for letting a house that was a nuisance. But it was a law that existed in vain, because there were no means used to bring it into proper action. The appointment of an officer of health would, he believed, effect the desired object.

Mr. Rawlinson and others also spoke.

NEW BUILDINGS IN OXFORD.*

Advantage is usually taken of the Long Vacation to effect renovations and improvements in the various University and other public buildings, as well as in the residences and establishments of private citizens. The present year has been characterized by unusual activity in this respect, and the restorations and new erections have been both numerous and extensive.

The new buildings at Christ Church, of which we have given a view, first claim attention. A portion of these were commenced last year on the site occupied by Fell's buildings and great progress has been made, the timber roofs being already fixed, and they will shortly be covered in with green Bangor slates. During the Vacation the old Chaplains' buildings have been taken down, the foundations for the western half of the new buildings have been laid, and the walls are rapidly rising. The work presents a façade of 330 feet. The architect is Mr. Deane, of Dublin; the contractor, Mr. Symm; and the superintendence of the works has been entrusted to Mr. W. C. C. Bramwell, architect, of this city. At the head of the staircase leading to the dining-hall, the archways have been enclosed with doors of oak and ornamental iron and glass, forming a vestibule, around which paintings removed from the hall during the late restorations have found accommodation. The work was executed by Mr. Wyatt, from designs prepared by Mr. Bramwell.

The buildings at Merton College are approaching completion. Sixteen additional sets of rooms will thus be provided. The new buildings form an open quadrangle with the older portions. The works have been designed by Mr. Butterfield, and executed by Mr. J. Fisher.

The restoration of the Gothic tower over the principal entrance of Brasenose College is now nearly completed. The work is a reproduction of the original, except the insertion of three figures, under canopies, executed by Mr. Earp, of London. In the centre, near the summit of the tower, is the Virgin and Child, while lower down on each side are St. Chad and St. Hugh, the patron saints of Lichfield and Lincoln, of which sees Bishop Smyth, the founder of the college, was successively Bishop. The entire work is executed in Milton stone, from Wychwood Forest. Mr. Buckler is the architect, and Mr. Wyatt the builder.

The Chapel of Jesus College is about to undergo considerable improvements. There will be a new chancel arch, span 18 feet, and elevation 25 feet. Black and white marble, alabaster, and castor stone will be employed. There will also be a new north window, decorated; a reredos, two arcades, and a new altar screen, of alabaster and yellow Mansfield stone. The floor will be entirely new, and composed of alabaster, marble, and Minton's encaustic tiles. The works will be executed by Mr. Wyatt.

At Queen's College, the south side of the Hall and Chapel has been renovated with Bath stone, Mr. Bramwell being the architect, and Mr. Wyatt the builder.

At Exeter, and some few other Colleges, minor alterations have been made.

St. Alban Hall is undergoing a complete rebuilding. There is much yet to be done in the way of restoration, new fronts, and the making of additional rooms, before the hall will be what it is intended to be, as regards its architectural appearance and general comfort. The whole of the works are being carried out by Mr. Selby, builder, from the designs and under the superintendence of Mr. John Gibbs, architect, of this city.

Great improvements are in contemplation at the Radcliffe Library. Mr. Wyatt is the contractor, and the work will be under the superintendence of Mr. Bramwell. The designs were prepared by Mr. Sydney Smirke, R.A.

The Ashmolean Museum is being thoroughly renovated and improved, in order to prepare the basement and first-floor for a museum of antiquities, and the upper story for an examination room.

The flourishing condition of "The Union" is plainly shown by the addition of a reading-room, writing-room, and housekeeper's residence. The new buildings, like the rest of the structure, are Gothic. The architect is Mr. Wilkinson. The builder is Mr. Symm. These buildings have been thrown open to public view by taking down the wall in New Inn Hall-street, and substituting an iron railing.

The new buildings at the Radcliffe Infirmary, consisting of an out-patients' ward, dead-house, &c., are so far advanced that it is expected they will be opened early in November. Mr. Bramwell and Mr. Bruton are the architects, and Messrs. Castle & Co. the builders. On the opposite or north side of the quadrangle, the chapel given by Mr. Combe, of the University Press, is making rapid progress. It is in the Decorated Gothic style, and in size is 60 feet by 20 feet. A vestry surmounted by a bell-turret, will project on the south side, and a corridor will connect the building with the infirmary. The floor will be partly laid with Minton's encaustic tiles. Gibraltar stone is being employed for the walls, and the dressings will be of Bath stone. Mr. Blomfield, son of the late Bishop of London, is the architect, and the work has been entrusted to Messrs. Castle & Co., builders.

The extensive and ornamental building in the New-road, intended for the offices of the Oxford District Court of Probate, has just been completed and occupied. Mr. Buckeridge is the architect, and Mr. Gardiner the builder.

The new corn exchange was opened in April last, and the new workhouse, on the Cowley-road, is now nearly ready to have the roof placed on it. The Street Commissioners are covering in the Trill Mill Stream, and the drainage of the low-lying districts of St. Aldate's and St. Ebbe's is being actively carried out.

The present year has also been distinguished by the formation of two hotel companies on the principle of limited liability. One of these purchased the Star Hotel, and, having thoroughly

* Condensed from the *Oxford Journal.*

renovated and improved it, re-opened it as "The Clarendon," in time for the Commemoration. The other company, "The Randolph," has secured a site by the purchase of several shops and residences, at the corner of Beaumont and Magdalen Streets; and the ground will, in a few weeks, be cleared for building operations. Mr. Wilkinson is the architect. The new hotel will contain about 130 rooms. The cost is estimated at 20,000*l*.

The new or improved private residences are legion.

Large additions are being made to the mansion of Sir Benjamin Brodie, bart., near Magdalen Bridge. The work is being executed in white and red bricks, with dressings of stone from the Box, Mansfield, and Hornton quarries. The architect is Mr. Deane, of Dublin; and the superintendence of the work has been confided to Mr. Bramwell. Mr. Wyatt is the contractor.

In the suburbs generally, much building is going on. This is especially the case at the eastern extremity of the city, numbers of additional houses being reared on the Iffley and Cowley Roads, and in St. Clement's, and various new streets intersecting these outlets. These houses, generally speaking, quickly find tenants.

THE MONUMENTS IN ENGLISH CATHEDRALS AND CHURCHES.

On this important subject there is much difference of opinion. Some would clear our venerable ecclesiastical buildings of all monumental matters which do not harmonize with the architectural style of the building; and would, for instance, in a Norman or Early English structure, remove all tombs and tablets which have been erected since the original date of the structure.

There is no doubt much that is unsightly and in very bad taste within the walls of our sacred edifices: in Westminster Abbey, for example, there are tombs both great and small which are not pleasant to the sight; and it must be confessed that Poet's Corner has somewhat the miscellaneous appearance of a statuary's show-room; besides, there are several memorials which have found place in the Abbey that are connected with persons who have been in no way eminent in association with English history, science, literature, or art. Most of the monuments have, however, very great interest;—some in consequence of preserving the memory of worthies; others for their antiquity, artistic merits, or picturesque combination with the architectural features of the interior. Besides, the monumental additions, which have been made here during so many centuries, have value in showing the various changes in our sculptural art. Even the tombs of the kings and queens have their marked peculiarities; and none, we suppose,—although those of Queen Elizabeth and Mary Queen of Scots are not, in their architectural style, in correspondence with Henry VII.'s Chapel,—would like to see their removal. The same may be said of many others. Besides, the passing years mellow these things into harmony with the objects among which they are put, and conceal many deficiencies.

Very few of our great ecclesiastical buildings are entirely in the style of one particular date. In Westminster Abbey, the screen of Islip's Chapel,—and some other points might be mentioned,—does not agree with the sharply pointed arches or the lofty vaulting of the choir, transepts, &c.; but this does not present an unpleasant appearance. The same may be said of the interior of St. Bartholomew's the Great, Smithfield, as regards the monument of the founder, and some additions made by Prior Bolton. Hundreds of similar instances will occur to the reader, wherein it would be the act of a barbarian to make all chronologically accordant.

In the Temple Church, London, we have an example of the effect produced by the removal of all the monuments, with one or two exceptions, to the triforium, where they are but seldom seen; and here there can be no doubt that if these memorials had been retained on some of the pillars, and in their original situations, they would to a considerable extent have served as a gauge by which the visitor (notwithstanding the restoration which has been made) would have been impressed with a better idea of the actual antiquity of the building than is generally felt at present. Now, the place, although so large an amount of money has been spent upon it, has a somewhat bare appearance, and looks, to a certain extent, like a church which has been recently erected in imitation of an old one.

The dean and chapter of Westminster Abbey having given a strong opinion against the admission of the dead into that place, into which, even within the last few years, several leading men of this iron age have been gathered,—it becomes a necessity to discuss the wisdom of this course. Within a very few years we have seen the ashes of Dr. Jenner translated here, and laid at their rest; of Robert Stephenson, Lord Macaulay, Lord Clyde, and others; and no one can say that any of these is unworthy of a grave in this honoured spot. It might, however, be worth thought if, as regards the burials here, or in St. Paul's Cathedral, of those who in their various pursuits have well served their country and the State, they should not be made a matter of Parliamentary vote. The custom of burying in churches is so bad that we would interpose every difficulty.

Too great care cannot be taken in selecting objects for this distinction; but, when once a burial has taken place here, it would certainly be unreasonable and unjust to prevent the raising of a suitable monument. And then comes the question of fitness. On Stephenson's account a stained-glass window has been placed, and an engraved brass let into the stone over the grave. These do not occupy any of the space which the dean is so anxious to preserve. There is a portrait of the great engineer in this window; but, so far as we have seen in connexion with modern, and for that matter ancient, works of this kind, there is a difficulty in rendering, with good effect, the human countenance; and as regards monuments in these days, the face must form an important part of the bust, medallion, or statue of the departed. It is not likely that in many cases these works will be made to assume the peculiarities of Gothic art: they will chiefly be representations of the men, in some costume which they were known to wear, shown in a refined, tasteful, but correct manner, by the sculptor's skill. It would be just as wrong to place an effigy of Robert Stephenson or Lord Macaulay in Westminster Abbey in a Roman toga or a Mediæval robe, as it would be to place in the Temple Church the representation of an eminent lawyer of our time in the cross-legged attitude and the chain mail of the knights of old.

HANDEL WINDOW, REDCLIFF CHURCH.

It having been resolved to put in a window commemorative of Handel, the composer, in the Church of St. Mary Redcliff, Bristol, Messrs. Heaton, Baynes, & Butler, and Messrs. Clayton & Bell were invited, with the co-operation of the architect, to submit designs. Both sent very good drawings; but ultimately the choice fell on that by Messrs. Clayton & Bell, who are to execute the work. The scheme of the chosen window may be described thus:—In place of canopies or ornamental adjuncts, the window will be filled with angelic choirs, each group singing from a musical stave, setting forth passages from Handel's "Messiah." These angelic groups furnish the lighter effects of colouring in the work, and separate the forms of the principal subjects into two tiers. The upper range of these subjects illustrates the following passages:—

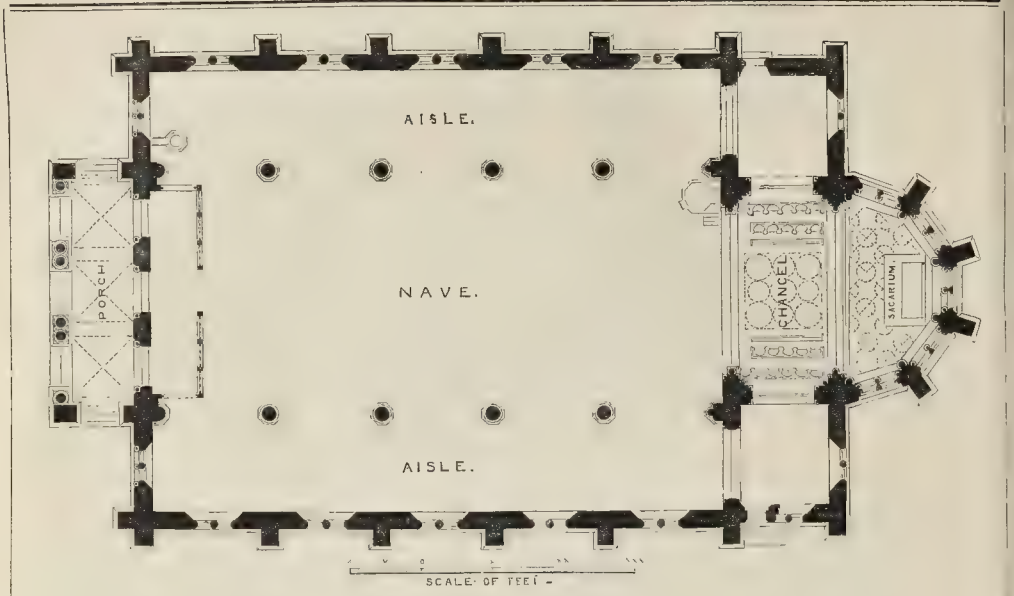
1. "Unto us a Child is born."
2. "He shall feed his Flock."
3. "Surely He hath borne our Griefs."
4. "Thou didst not leave His Soul in Hell."

The lower tier has smaller groups, arranged to illustrate the passages,—

1. "Behold, a Virgin shall conceive."
2. "All we like Sheep have gone astray."
3. "Behold, and see if there be any Sorrow like unto His Sorrow."
4. "He was cut off out of the Land of the Living."

CEMETERIES AND GRAVEYARDS.

Since the establishment of large suburban cemeteries a great change is observable in the order and arrangement of these sanctuaries of the dead; and nothing more clearly denotes advanced social refinement than the high artistic character of our tombs and the laying out and plantation around them. Paris had adorned Père la Chaise long before any movement occurred in England: it was visited by all travellers, and especially by those from this country, whose admiration was excited by sculptural and floral embellishments, which in those days were not to be found by them at home.



Rude and tasteless as places of sepulture then were, there was nothing like the desecration of the dead described in last week's *Builder* by Mr. Donaldson, in a letter from Ireland; although there, too, new and improved cemeteries have been lately established, the exposure and desecration of mortal remains in ancient burying-grounds would appear to continue, as it always had been a sort of national habitude. The old metropolitan Campo-Santo near Dublin, in which Brian Borhoime's tomb, a tower, stands, in the memory of the writer, exhibited a spectacle so revolting, of mangled remains festering in the sun, not to speak of skulls and dry bones scattered at large, that he shudders at the recollections of the wide charnel field. Here it was, certainly, that the poor were interred; still such a condition of things argues a very low state of civilization, and the utter absence of refined feelings in these particulars.

Sanitary considerations having lately shut up the metropolitan churchyards, the opportunity therefore arises not only for laying out and adapting extensive cemeteries near London, but also for improving, ornamenting, and so utilizing the old and heaped graveyards within our civic boundaries. The cessation of interments now admits of opening out, planting, and otherwise improving these hitherto drear inclosures; in the first place, by the abatement of high walls and the substitution of iron railings, thus affording free air and scope of view; next by raising the bristling flag stones, and laying them in a horizontal position; allowing the marginal and intervening verdure to deck the general superficies; and lastly, by planting shrubs and forest trees (lindens) where suitable. St. John's-wood Cemetery, now discontinued, is so railed round; the Marylebone ground on both sides of Crawford-street is also railed; herein there are flagstones standing on end at every two square yards; very few monuments or sculptured designs; no plantation, save the spontaneous growth of chrysanthemums, which have increased to an underwood thicket. These grounds, at least ten acres in extent, offer a fair field for improvements, by laying the tombstones horizontally, and planting the intervals.

What mode of plantation? is the question; and this seems to be as yet a moot point. In the Brompton Cemetery,—a very extensive range, *walled round and cinctured with a graceful and vigorous ivy vesture*,—the first effort was made at laying out the ground on a tasteful and professionally scientific plan. Here, a system of division in quarters and sections has been judiciously adopted; and *trees* and shrubs have been allowed to arrive at maturity; walks, grass, and borders being also reserved, so as to characterize the design; care being also taken to locate and isolate monuments of a superior character, and to preserve a well-blended effect of plant and shrub; whilst every reasonable latitude is allowed for votive flowers and emblems. The encouragement of this taste has awakened an interest in floral decoration; and the bereaved visitor to the "lap of earth," where repose the mortal part of a lost one, can feel renewed solace in that germinating bloom which so sweetly and naturally betokens resurrection.

As to the sort of plantation best suited to such places, the ancient preference was for yew and arbor vitæ. These are, no doubt, funereal and apposite; but that which lends grace and odour to the field is surely the most appropriate as well as attractive;—here and there a forest tree, a yew, an arbor vitæ—but intersperse them;—the arbutus, lovely in flower and in fruit, and the hundred other shrubs of luxurious flower and foliage. Still, where so many will plant their favourite nuralings, a directing gardener, being also a man of taste and skill, ought to have the arrangement of plantation, leaving the commemorative flowers to the fancy or taste of each votary.

Thick plantation of forest trees is altogether improper for a cemetery where interments are still being made. The lofty growth would be obstructive of free circulation, and must harbour miasmata; whereas the growth of lesser shrubs and vegetation is a process of nature whereby the rich deposits of mortality are absorbed, utilized, and dispersed. In the old grounds where burials have been for ten years discontinued; as, for instance, in St. George's, Hyde Park; Mount-street, Grosvenor-square; and sundry other places, trees flourish exceedingly, and bring a breezy freshness to the adjacent dwellings. Were the tombs laid flat and plantation introduced in large spaces now useless and revolting in appearance, spaces which St. Pancras and all the parishes more or less contain, metropolitan health would be improved, while disgusting blemishes were redressed. The more the metropolis extends the greater the value of central space becomes. There is no great expense in levelling a few tombstones and in planting a few trees and shrubs. If this would not facilitate commercial traffic, it would bestow health, with adornment, upon many confined and stifled quar-

NAPLES CHURCH.—*Plan.*

ters. Expanses now blocked in, dark and noisome, might be converted into pleasant gardens; and free intercourse through these now mystic accelamm would cheer and accommodate thousands of small lodging-room families who have no place for exercise beyond the lane or court of their humble domicile.

NAPLES CHURCH.

In our notes "Going Along," we have had occasion to remark on the aspect of some of the buildings abroad used for the services of the Church of England. In Naples we are glad to find a worthy building is being erected for the purpose. This church, of which we give an interior view and the plan in our present number, has attracted considerable attention, moreover, on account of its being the first Protestant church erected in the South of Italy. It is now being carried up under the superintendence of Messrs. Thomas Smith & Son, of London, whose design was selected by the Naples committee in a limited competition of twelve English architects. The style of the church is that which prevailed at the end of the thirteenth century; and the plan consists of nave, north and south aisles, and chancel with semi-decagonal apse. The aisles are continued to the commencement of the apsidal end, and form a vestry with organ gallery over on the south side, and a chapel for invalids on the north. A handsome arcaded carriage porch, the width of the nave, having three doorways leading into the church, is placed at the east end or principal front next the street. Open seats with inclined backs will be provided to accommodate 600 adults.

The walls are built of different coloured tufos from Sorrento, of red, grey, brown, and stone-colour tints. Care has been taken in selecting the tufos that will stand the external sea air, as those at Naples, having a large proportion of the oxide of iron, crumble away with the least wind. The architects, in selecting the tufos, found that the quality of the material in each quarry is different in proportion to the depth of the excavation. The upper surface is light, friable, and contains more pumice; while the lower stratum, which has undergone much pressure, is compact and of a darker colour: that lower than the sea level is nearly black. The tufo is very cheap and easily worked, being cut with a hatchet: it is set with a very close joint in regular courses. The external dressings of the windows, doorways, &c., are executed in white Malta stone, which is very similar to our Bath stone; but for all the internal dressings and the work intended to be carved, a beautiful fine-grained stone, also from Malta, has been used. This stone is like Caen stone in colour, and is easily and effectively worked. All the carving will be from natural foliage, and the caps of the nave shafts will be varied by the introduction of figures among the foliage. The chancel will be groined, as shown in the engraving, and will be paved with Minton's tiles. All the joiners' work will be sent from England, on account of the inferiority of the Neapolitan joinery. The roof over the nave, as will be seen in the view, is waggon-headed, with moulded horizontal and vertical ribs dividing the cants into square compartments, with moulded arch ribs springing from wall to wall over the nave piers. The ceiling will be formed with plaster between the moulded ribs, and afterwards enriched with suitable decorations in colour. The aisle roofs are similar to the nave roof. The whole of the roofs will be covered with Bangor slates, sent out for the purpose. The windows will be doubly glazed, on account of the great heat, and it is proposed to fill the chancel windows with stained glass. The work is being carried out by native workmen, under the direction of Mr. Pulham, an English foreman, who has been employed under the architects upon works abroad for about fifteen years. Hereafter we shall give a view of the exterior.

POPULATION OF LONDON DISTRICTS.

Mr. Clarke, in his publication, "The Hovel and the Home," directs attention to the increase of the population of districts in which large numbers of the dwellings of the poorer classes have been removed. Mr. Clarke's figures show that in the Clerkenwell district, although the houses have recently decreased from 7,530 to 7,354 (176), the population has increased from 64,778 to 65,681 (903) persons. In St. Saviour's, the houses have decreased from 4,844 to 4,675 (169), and the inhabitants have increased from 35,731 to 36,170 (439) people. In St. Luke's district, the houses have decreased from 6,596 to 6,585 (11), and the population has increased from 54,055 to 57,073 (2,918). In St. Luke's, there is a decrease of eleven houses, and an increase of population to the number of 2,918. Through the reduction of earnings, the working watchmakers of Clerkenwell are obliged to be content with two, and even one room, for the use of their families, instead of three rooms, which they were able to pay for formerly; and in this way more families are sheltered under a single roof. In St. Luke's, Clerkenwell, Bethnal-green, &c., rooms, miserable ones enough, can be had for the use of families at a rent of 2s. or 2s. 6d. a week; and to those places persons who can only afford to pay that amount of rent resort. There can be no doubt that the majority of the dwellings in the Holborn district, St. Sepulchre's, &c., which have been removed, were of a worse description than those now remaining. There is most pressing need for improvement; but we do not see that anything which is yet in progress will meet the evil. We fear that Peabody's Buildings, now in progress, will not do so, although this and other building schemes which are suggested will accommodate a number of the better-conditioned of the London poor; and leave additional space elsewhere for others: but for years to come the main dependence must be placed on careful measures in connexion with the dwellings now in existence.

THE LATE MR. JOHN BOWYER NICHOLS.

Another long-worker well known to many, has gone honourably to his rest. Mr. John Bowyer Nichols, F.S.A., one of the Registrars of the Royal Literary Fund, died on the 19th inst., in his eighty-fifth year. He for many years took a part in the editorship of the *Gentleman's Magazine*; and among his other literary productions were "A Brief Account of Guildhall," 8vo., 1819; "The History of the Royal Hospital and Collegiate Church of St. Katherine, near the Tower of London," 4to., 1824; "Historical Notices of Fonthill Abbey," 4to., 1836; and a republication of Nash's "Illustrations of the Palace of Brighton," in folio, 1838, bringing down the history of that odd structure to the close of its palmy days. Mr. Nichols also added some volumes to the extensive series upon the Literary History of the Eighteenth Century, commenced by his more celebrated father, Mr. John Nichols, the biographer of Bowyer and historian of Leicestershire, of whom he was the only son. In the hands of his own son, Mr. John Gough Nichols, the family reputation is losing none of its lustre.

BRIDGE OVER LUDGATE HILL.

A correspondent, signing "Rough Diamond," says,—"Will you allow me to suggest, through the medium of your columns, that a foot-bridge be built alongside the railway bridge about to be made over Ludgate-hill, which, with a flight of steps communicating with each pavement, would save many accidents from people crossing the road in this crowded thoroughfare." A crossing bridge there would doubtless be useful, but we have no wish to seem to concur in, or to have anything to do with, the intended discreditable disfigurement of the most important thoroughfare in the metropolis, and a building that belongs to the world. We feel sure that the act will entail everlasting shame on its perpetrators, and on those sleeping watchers who connived at it.

NEW PROTESTANT CHURCH, NAPLES.—*Interior, looking North-east.*—Messrs. Thomas Smith & Son, Architects.

NEWS FROM SCOTLAND.

Edinburgh.—Several improvements have been effected on the decoration of the Great Hall of the Parliament House. The full-length portrait of Lord Brougham, by Mr. Macnee, has been hung up on the west wall, to the right of the statue of Lord Melville. Lord Brougham once walked the floor of the Parliament House a briefless barrister, as we would call him, and by no means a favourite with the law lords: he soon shook the dust of this floor from his feet, and came to London, which appreciated him somewhat better than Edinburgh did, at least in law. On the left of Lord Melville's statue has been placed a portrait of Lord President Hope, presented by the Writers to the Signet, who have offered to place at the disposal of the Faculty of Advocates any pictures that they might select, to decorate the hall of the Parliament house. The Dean of Faculty made application for a portrait of the Duke of Argyle from Holyrood House, which had previously hung in the Parliament House, and the Queen graciously granted permission for its restoration to its former position. The picture has, accordingly, been brought from Holyrood, and now forms a conspicuous feature in the decorations of the Parliament House, as it has been hung close to the portrait of Lord Brougham. The Writers to the Signet have also contributed a portrait of Lord President Blair, which has been placed above the entrance. Mr. Maconochie Welwood, of Meadowbank, has been the first out of doors to present to the Faculty a picture to be added to their gallery, his gift consisting of a portrait of Lord Abercromby,—an early Raeburn. Three new busts have also been added to those which were formerly placed at intervals along the side of the hall.——The *Scotsman* says of the new exhibition of Scottish art:—"As a whole, nothing like it has hitherto been seen in Edinburgh. It embraces many of the best works hitherto produced by living Scottish artists. But besides the pictures by livings artists, the exhibition contains a great number of fine works by deceased Scottish masters." The Royal Scottish Academy, it adds, have acted wisely in opening such an exhibition on the occasion of the Social Science Congress in the city.——A memorial window to Miss Agnes Marshall has just been placed in St. Andrew's Episcopal Church. A figure of Faith resting on the Cross is introduced in the centre. Her base is a monogram of the lady's initials in a lozenge shape. The whole is surmounted by Norman bordering. This window has been executed by Messrs. Ballantine & Son, Edinburgh.——The citizens, says the *Scotsman*, have been long indignant, and strangers astonished, at the dilapidated state in which a conspicuous portion of the Castle has been allowed to remain since the operations for its contemplated improvement were suspended. About six years ago the north barrack was dismantled, with a view to its entire removal, and the erection of a garrison church on the site. But at this stage the work was countermanded, and the block was left an unsightly ruin. Towards the close of last year, Mr. Billings, architect, was instructed by the War Department to inspect and report on the remains of the barrack, and plans for its reconstruction having been subsequently prepared by the Department, Mr. Billings has now been intrusted with the elevation and external details. The style of the restored building will be similar to that of the block known as Queen Mary's Rooms. The arrangement and fittings of the interior will be of the simple character common to all barrack-rooms throughout the country. For some time past Mr. Billings has been occupied with the monograms and the carvings for the portholes, which he is executing with his own hands, and this part of the work is now well advanced. A commencement has also been made in pulling down the portion of the south wall that is to be removed, so that the much desired restoration of the castle may be considered to have got a fair start.

Leith.—The new wet docks to be made in Leith by the Local Commissioners of the Harbour and Docks, according to plans prepared by Messrs. Rendel & Robertson, civil engineers, will soon be commenced by Mr. Scott, contractor, Kilmarnock, who has entered into a contract with the commissioners for the execution of the works. The plans embrace extensive works, which will necessitate the enclosure of 62 acres of the East Sands, over which the tide flows, and involve an expenditure of 341,000*l.*, while five years will be required to complete the operations. Sections of two docks—an outer dock and an inner dock, with locks, bridges, and other indispensable constructions, are given, but the outer dock only has been contracted for. The land reclaimed for this dock will amount to 34 acres, with 19 acres of wharfage. The cost, according to the engineers' report, will be 223,000*l.*, and the time required for constructing it three years and a half. The engineers' estimate for the works about to be commenced is thus given:—

Reclamation wall and bank	£43,500
Dock walls	43,000
Basin walls and apron	18,000
Lock-gates, sluices, and machinery	30,000
Excavation	35,000
Sheds, bollards, and cranes	9,000
Wharfs, roads, and approaches	7,000
Sea-parapet and boundary-walls, including gates	8,500
	£194,000
Contingencies, supervision, &c., 15 per cent., or say	29,000
	£223,000

Glasgow.—The plans of a new church, to be erected in the West End for the use of the Congregationalists at present worshipping in the Queen's Rooms, have been prepared by the architect, Mr. John Honeyman, jun. The site is at the corner of Claremont and Berkeley Streets, immediately behind the east end of Sandyford-place. The church will thus be a prominent object from Bath-street, Dumbarton-road, Sauchiehall-street, and a great part of the West End Park. The building will be in the Gothic style of architecture of the Decorated period, with tracery in all the windows. It will consist of a nave and two short side aisles, or rather transepts, opening to the nave with two arches, so that the roof of the nave is not broken into, but has a continuous cornice from end to end. The arches of the side aisles are supported by circular shafts of Carnock stone, coupled with four small shafts of polished serpentine, and the capitals will be richly carved. The extreme length of the interior will be 92 feet, and the width, including side aisles, 80 feet; the width of the nave alone being 43 feet. It will be spanned by a hammer-beam roof open to the collar beam, and having the spandrels filled in with tracery. The spire will be placed at the corner, and on the north, east, and south sides will be detached from the church. Its height above the pavement will be 180 feet. The base of the tower forms the principal entrance porch, and doors for egress are provided at the north end of the church. In the basement of the building there will be a large hall capable of accommodating upwards of 300 persons; also a vestry, class-rooms, and retiring-rooms. The church will accommodate 970 persons.

CHURCH-BUILDING NEWS.

Foxearth (Essex).—The restoration of the church here has been completed by the recent erection of a new tower, of flint, with broach spire, 130 feet high, at the cost of the rector, the Rev. John Foster. The walls of the tower (which is thrown into the church) are at present bare. The panels of the rood-screen, pulpit, altar, and reredos are filled in with paintings. On the left of the rood-screen are female saints and virgins, with different emblems, and on the right several Eastern swarthy bishops and ecclesiastics. Scriptural subjects,—"The Last Supper," &c.,—are delineated on the altar table. St. Ambrose, with his whip, occupies a conspicuous place on the pulpit. All these paintings are executed in the quaint Mediæval style, *à la Chinois*, without any regard to perspective, with head and limbs distorted at right or acute angles. Gold leaf and varnish are extensively introduced. The chancel is divided from the nave by a screen, surmounted by a cross, and closed doors. The altar is of carved oak, with paintings. The last addition to the church has been an organ, built by Mr. Willis, of London. It is placed in the chapel at the end of the aisle in front of the vestry. After the modern economical fashion, it is without any case, except that required for protection to the keys, working apparatus, bellows, &c.

Mapledurham (Oxon).—The parish church of Mapledurham, after having been closed for divine service for several months, has been re-opened. The exterior has been put into a state of complete repair: a new stone porch, with carved oak front, has been built, surmounted by an iron Maltese cross; and a similar cross, but of larger dimensions, ornaments the eastern apex of the nave: a new tiled roof has superseded the old flat leaden one of the chancel. In the interior the gallery has been removed, thus giving the church a larger and lighter appearance. Two new windows have been placed in the north wall, and the arch laid open into the tower, which is thus thrown into, and becomes part of, the church. There is also a trefoil oriel window placed in the tower. The seats in the nave are of deal, stained and varnished. The pulpit is of carved oak, as also are the whole of the fittings of the chancel, and a reredos of Sienna marble, with a cross in alabaster in the centre, has been placed under the eastern window. The interior of the roof of the chancel, of which there are but very few specimens in England, has been preserved: it consists of panels painted blue, and ornamented with gilt stars. The whole of the work has been done under the superintendence of Mr. W. Butterfield, of London, architect, by Messrs. Wheeler, of Reading.

Knockholt (Kent).—Knockholt Church, near Sevenoaks, Kent, recently closed for restoration, has been re-opened. The alterations have been carried out by Messrs. Cox & Son, of London, church furniture manufacturers. The gallery at the west end has been removed, and the church re-seated with stained deal benches of a simple design. New oak pulpit, reading-desk, and altar-table, with wrought-iron altar-rails, which are painted and gilt, and new stained deal doors, with ironwork, have been provided; as also an oak reredos, with zinc panels, illuminated with the commandments, creed, and Lord's Prayer. The restoration of this church has been carried out as a memorial of Miss Thrale, a lady well known for her great liberality, and who has left 150*l.* per annum to various charities connected with this parish. The poor of Knockholt have subscribed among themselves to erect a "poor man's memorial window" to their benefactress. This consists of a lancet window, with a painted medallion, representing Dorcas distributing garments to the poor. The medallion is surrounded with a geometric pattern, and the whole is inclosed in a border. An engraved memorial brass is placed below the window, with an inscription. The above window, with another on the other side of the chancel, was painted by Messrs. Cox & Son.

Hayward's Heath (Sussex).—The chief stone of the new church lately referred to in the *Builder* has been laid. The edifice will consist of a nave, two aisles, a chancel, and a central tower, and will be in the Early Decorated style. The material is sandstone obtained from the neighbourhood, the interior being lined with red brick from St. John's Common; the arches, windows, and dressings being of sandstone. The whole length, from east to west, is to be about 100 feet, and the entrance will be by a porch from the north side, and by a doorway at the west. Sitting accommodation will be provided in it for about 700 persons. The architect is Mr. G. F. Bodley, of London; and the builder, Mr. J. Fabian, of Brighton.

St. David's.—Measures are about to be taken by the Dean and Chapter of St. David's, for the complete restoration of the cathedral. The work will commence, under the superintendence of Mr. Scott, as soon as the necessary funds are provided. A public meeting will be held at Carmarthen, on the 28th inst., under the presidency of the Bishop of St. David's, with the view of inviting the co-operation of the Laity as well as the Clergy of Wales to aid in the work.

Rhydymwyn (near Mold).—A new church has been opened at Rhydymwyn, in the parish of Cilcain, and about three miles from Mold, on the road to Denbigh. The plan of the church consists of a nave 55 feet long and 21 feet 6 inches wide, with a porch towards the west end. The chancel is 28 feet wide, with a vestry attached to it on the south side, and a space provided for the organ. The style is that which prevailed during the latter part of the thirteenth century. The east window has three lights, with jamb shafts and mullion shafts, all of polished red marble, and with moulded arches. The sill is raised above the floor level, and a carved cornice extends across the chancel under it. On the north side of the chancel there is one window with two lights, also having jamb shafts, &c., somewhat like the east window. A lofty shaft with carved capitals in the jambs divides the nave from the chancel. In the side walls of the nave there are five two-light windows, three on the south side and two on the north side. In the west-end wall there is a larger two-light window, extending up into the gable, and enriched in the upper portion. The walls of the chancel inside are built with Bath stone. The walls of the nave are plastered, with occasional bands of stone, taking the lines of the windows. The walls are crowned by carved and moulded stone cornices, surmounted by roofs of high pitch, all the timbers of which are shown on the inside. The roof of the nave is divided by arched and moulded principals into six bays. These are again subdivided, producing a vista of interlacing timbers. The church roof is divided into three bays

of carved timber, and is of a somewhat different construction. A wide arcading, forming part of the roof, surmounts the stone cornice on which the roof rests. Under the east window and over the altar table, which is raised four steps above the nave floor, there is a reredos about 8 feet wide (having Irish green marble shafts at the angles with carved caps), representing the Last Supper in incised work—the ground and all the lines of the figures, draperies, &c., being filled in with a hard red pigment. The floor of the chancel is paved with Minton's tiles, the foot-pace being decorated and considerably enriched. The pulpit is of Caen stone, with marble columns and carving. It stands on the north-east corner of the nave. The sittings and stalls are all made of pitch pine. The total cost of the building up to the present date is 2,385*l.* 5s.

Lower Crumpsall.—The Bishop of Manchester has consecrated the new church of St. Thomas, Lower Crumpsall, the first stone of which was laid by his lordship on the 18th of October, 1862. This is the second church that has been consecrated in the township within the last four years, and completes the scheme for providing increased church accommodation. The site of the new edifice adjoins the main road, and is about a mile distant from St. Luke's Church, Cheetham-hill. The land for the church and parsonage, consisting of 4,500 square yards, was obtained from Mr. Lewis Loyd, of London, for 2,800*l.* The church is in the Decorated Style, 102 feet in length, 76 feet high, and 34 feet wide, the chancel being 26 feet by 18 feet. It consists of nave, chancel, porch, and vestry, with a belfry of carved wood. The material of the body of the church is Yorkshire stone, with Hollington ashlar dressings. The nave consists of six bays, the tracery of each window being varied. There are large traceried windows at the east and west ends, of three and four lights respectively. The roofs are open timbered, with brass pendants. There is sitting accommodation for 450 persons, and half the seats are free. The seats are made of stained deal. The cost of the church has been 2,500*l.*, a large portion of which has been raised by voluntary contributions. One benevolent individual gave 1,000*l.* There is still a debt of 500*l.* Messrs. G. & J. R. Shaw, St. Chad's, Saddleworth, were the architects.

DISSENTING AND ROMAN CATHOLIC CHURCH-BUILDING NEWS.

Epsom.—The foundation-stone of a new Wesleyan chapel has been laid here on a site near the station of the London and South-Western Railway. The land, which is freehold, together with the outlay, will be about 1,000*l.* Some little progress has already been made with the building.

Guildford.—The new Congregational Chapel at Guildford, having been completed, at a cost of 3,350*l.*, has been opened for service. The old chapel having been found too small and altogether unsuitable, it was determined to build a new one; and a committee was formed, subscribing at their first meeting 680*l.*; and the building is now free of debt all but about 300*l.*, the cost of the site being left for gradual liquidation.

West Ashling (*Sussex*).—The foundation-stone of a new Congregational church was laid on the 18th ult. Mention has been made of the fact that the materials used formed a portion of the cathedral at Chichester. The architect is Mr. H. N. Goulty, of Brighton: the contractors are Messrs. Parker & Co.

Bath.—The Roman Catholic Church of St. John the Evangelist, which has been erected near the South Parade, Bath, has been consecrated. The edifice was designed by Mr. C. F. Hansom, of Clifton. The design includes a tower and spire, which, when complete, will be upwards of 200 feet high. At present, however, only 60 feet of this tower is built, sufficient to clear the roof of the nave. Externally, the church is one mass of gables. Taking the north side, we have first the gable of baptistery, next the gable of the porch, then the three gabled bays of the north aisle, and then the large gable of the transept, with its circular window: beyond this are two gables on the side of the lady chapel, and over them the gabled windows of the chancel. The west front has the tower in the centre, with the baptistery and chapel of St. Benedict at the sides. The west entrance has panelled doors enriched with tracery, &c. It is surmounted by a crocketed gable, exhibiting some carvings in the spandrel, prominent among which is the eagle, emblematic of St. John. Over this door is a window of five lights, with tracery. The roof of the chancel is defined externally by a cresting of iron, painted and partly gilt, terminating with a foliated cross at the point of the apse roof. The plan of the church consists of nave, with north and south aisles and transepts, chancel, and side chapels, western tower, baptistery, &c. Entering by the west door, the lower stage of the tower forms a porch, 20 feet by 16 feet, separated from the nave by a stone screen of three arches, over which is the organ gallery. On the right is the chapel of St. Benedict, forming the western termination of the south aisle, and corresponding with it on the left is the baptistery, each 18 feet by 14 feet. The nave and aisles together measure 75 feet by 60 feet: the former is separated from the latter by an arcade of moulded arches, resting on fourteen pillars of polished Devonshire marble, with carved capitals of Ancaster stone, each capital being a study of natural foliage slightly conventionalized; among which are the holly with buds, the primrose and ferns, the vine and wheat, the passion-flower, the fig leaf and fruit, the rose, shamrock, and thistle, the blackberry, &c. In the spandrels between the arches are carved, in *alto relievo*, demifigures of angels in circular panels, playing upon musical instruments. Over these is a clerestory of eight three-light windows of simple tracery. The nave roof is ceiled in the form of a double segment arch, and is divided into panels by wood mouldings, each bay being defined by an arched principal of stained deal, enriched with open tracery. The aisles are each lighted by three windows of varied tracery, with the addition of a triangular traceried window over the door to the presbytery already noticed. Between each window is a wall shaft of stone, with carved capitals, supporting arched principals of stained deal with open traceried panels. The transepts at the east end of each aisle project 7 feet, and are lighted by rose windows, 18 feet in diameter, filled in with tracery. The lower portion of the transepts are occupied by the confessionals, two on the north and one on the south, all of stone, with moulded piers and arches. The chancel is 30 feet long by 28 feet wide, terminated by a semi-octagonal apse. The roof is groined with moulded ribs, having bosses of foliage at their intersections. On each side are two moulded arches, with parclose screens separating it from the chapels, over which are dwarf windows above the chapel roof. The three end windows, of three lights each, are the only ones at present enriched with stained glass, the subjects being respectively the Crucifixion, the Resurrection, and the Ascension, executed by Mr. Hardman, of Birmingham. The high altar and reredos were executed from the designs by Mr. Earp, of London. The altar proper is of polished marble and alabaster, and is an open one: it stands upon six red Devon marble shafts, with carved capitals of alabaster. The reredos at the back of the altar is divided into five compartments, the centre one being occupied by the tabernacle, &c., the door of which is of metal, gilt, and inlaid with precious stones. The other four compartments contain sculptures, representing the life of St. John. Surmounting the whole are twelve angels with outstretched wings. The jambs of the chancel windows have Devonshire marble shafts supporting arches: an arcade with marble shafts runs round the apse behind the altar. The other chapels have also altars and reredos. At the south-east of the church are sacristies, two stories in height from the lower story. A corridor runs along the side of the church, and connects them with the presbytery. The principal front facing west is in continuation of that front of the church, and it is erected in the Domestic style of Gothic architecture. A projecting porch runs up two stories, terminating with traceried embattlements: there are four stepped gables in the upper story, surmounted by animals holding gilt vanes. The masons' work has been done by Messrs. Bladwell & Ambrose, and the carpenters' work by Messrs. Morgan & Lovell. The glass for the church was supplied by Mr. J. Gay, of Bristol. The gas-fittings were supplied by Mr. N. G. Wilcocks. The whole of the carving and sculpture has been executed by Mr. Earp. Mr. Herridge was the clerk of the works.

Ramsey (*Isle of Man*).—About three months ago there was an ugly dilapidated building between the Albert Hotel and Mr. Midwood's Baths, the upper part of which was used by a coach-builder, and the lower story was unoccupied, in a state of mouldy dampness; the whole lighted by a lot of square small openings, placed irregularly, and only partially glazed. The land and building were purchased by Mr. John Lane, and have been presented by that gentleman to the Roman Catholics, to be converted into a chapel. Although the structure is not completed, the outer walls not having been plastered as they are intended to be, the edifice as it now stands shows what can be done in designing alterations. The edifice is nearly 60 feet long, and 20 feet wide, and 150 persons can be comfortably seated therein. The old floor, which formed the two stories, has been taken away, and the whole height has been thrown into one. The fifteen old square windows on the two sides have been made into six two-light windows, with Gothic pointed arches. These and the other windows are glazed with plate glass stamped of a diamond pattern, with the Maux Cross and the Fleur-de-lys alternating; the glass supplied by Messrs. Forrest & Co., of Liverpool. The framework of the roof principals is of simple design, varnished. The entrance is in the gable end next to the Albert Hotel, in the centre, and there is a circular window above, and two pointed windows at the sides. The gable is surmounted by a belfry, bell, and iron cross. There is an organ in the corner to the right hand of the entrance, and the chapel will be heated with hot water. The vestiarium is at one side at the altar end. The expenses of fitting up the chapel will be defrayed by subscriptions.

STAINED GLASS.

Marchwood Church (*Hampshire*).—A stained glass memorial window has just been erected in the south transept of this church, by Mr. and Mrs. Holloway, of Marchwood Park, after a design by Mrs. Holloway. The window is a triplet, of the Early English style, and has been executed by Messrs. Thomas Baillie & Co., of London. In the left-hand compartment (looking at the window), in the upper part, is the pelican. In the centre medallion is shown the child Samuel. In the medallion above, the group represents Samuel anointing David. In the medallion below is the illustration, "The Infant Samuel brought to Eli," with text at bottom, "Their angels do always behold the face of my Father which is in heaven." In the right hand compartment, in the upper part, is the Holy Lamb and Banner: in the centre medallion is shown the Infant St. John the Baptist: in the medallion above is the Baptism of Our Saviour by John: in the medallion below is John the Baptist preaching in the Wilderness: in the centre compartment, in the upper part, is the Dove; in the centre medallion, the Infant Saviour: in the medallion above is shown the Resurrection of Our Saviour; and in the medallion below are the family armorial bearings, with crest and motto, &c.

Albury Church (*Surrey*).—Two stained-glass windows, by Mr. A. Gibbs, of London, have been placed in the nave of this church. One is a memorial of the late rector, the Rev. John Hooper. It is divided into three compartments: the top represents the Saviour enthroned, surrounded by seraphim, while two angels stand with censers on either side, and two more are sounding their trumpets for the doom. Below are the three Maries coming with sweet spices to the Holy Sepulchre, while an angel points to the empty tomb. Below these is the entombment of our Lord, by St. Joseph, of Arimathea, and the disciples. The other window is a gift from the visitors whom the scenery attracts to Albury during the summer months. It has been placed near the font, and is likewise divided into three medallions, depicting Noah coming out of the ark with his family, our Lord's baptism in Jordan, and His blessing little children.

Basford Church (*near Nottingham*).—A memorial window to Mr. Ichabod Wright, of Mapperley Hall, has just been erected in this church. The subject of the Crucifixion occupies the greater portion of the window, and the other portions are filled with rich mosaic ornamentation. The artists are Messrs Ballantine & Son, Edinburgh.

St. Stephen's, Worcester.—A new stained-glass window is about to be erected in Barbourne Church. It will be the west window of the nave, and is to be presented by a private individual. The artist is Mr. F. Preedy, of London. The subject of the window will be the life and death of St. Stephen, in eight compartments, with our Lord in glory in the circular tracery at the top.

Awliscombe Church, near Honiton.—A stained glass window has been set up in this church, by Mrs. Pring, to the memory of her two sons, John Pring, late captain in her Majesty's 27th Regiment, and Daniel Pring, late captain in the Royal Navy. The subjects of the window are—"The Man of Sorrows," "The Centurion," and "The Storm at Sea." The east window, of eight lights, has also been filled with stained glass, by the Rev. M. Jackson, M.A., Rector of Bow Brickhill. It illustrates Christ's sufferings, and was erected in

memory of his late wife, who died at Awliscombe. The work was executed by Messrs. Heaton, Butler, & Bayne, of London.

THE METROPOLITAN WATER SUPPLY.

With reference to the water doled out to the inhabitants of Bethnal-green, it appears 40s. per year is the rate paid even for that scanty supply. In some towns 40s. would buy eighty thousand gallons; but I suspect the people of Bethnal-green have not a tithe of this quantity for their 40s. I find the average cost to the eight London companies to pump one million gallons is 10*l.* 11s, which is a fraction over 2¼d. per thousand. I presume in many cases, if the water could be measured, it would, as charged, amount to 2s. 6d. per thousand. Take the case of a house 28*l.* per year, and the water-rate 50s. I have heard of machines similar to gas meters being used, and the price in that instance is 75*l.* per million.

If there is any improvement suggested to the present water supply to the metropolis, all the eight companies will immediately combine, and, if necessary, spend a million sterling to be able to continue to force their impure water down the throats of the unlucky inhabitants. I am, moreover, informed that the water companies have the votes of sixty-eight members of Parliament in their interest; so, in fact, it just amounts to this:—

"*To the inhabitants of London.*—We will compel you to use our water, of whatever quality and quantity we think proper to supply to you, and also charge any rate we may think fit."

What would the inhabitants say if bread or any article of food were thus monopolised by eight arbitrary companies? And is not water as much a necessary of life as bread? I consider the people of London particularly unfortunate to have their water supply in the hands of powerful trading companies. I assume them to be worse off for water than any other town in England that has a water supply system.

I say that the supply of water to the metropolis ought to be on the constant service system, and in the hands of a Central Metropolitan Board of Health, or under Government. Every dwelling should have it imperatively and every water-closet, and a general rate should be levied to defray the expenditure. Trust to no joint-stock companies in any way. If small towns can supply water at 6d. per thousand, the metropolis could be supplied for half that price.

We can raise millions for any new railway, and why could not money be advanced by Government to turn a river from some distance into London, that there might be a copious supply, not only indoors, but out.

Anti-Monopoly.

OUR INCLOSED "OPEN SPACES."

In your notice of the improvements at Islington Green, you have hit a blot. People are being congratulated on our open spaces being converted into gardens, but for what reason I hardly know. These open spaces are the old playgrounds of the children of the poor; and, one after another, the poor children are being deprived of them in London and its suburbs. It is monstrous, in these days of sanitary reform and medical officers of health, that such things should be permitted. It was only the other day, while I was crossing what was Camberwell-green,—and which is now converted into a tawdry ill-grown garden,—that I was ordered off the green sward by a surly Cerberus, who told me the public were only allowed to walk on the narrow path. If such be the spirit of our modern improvements, the less we have of them the better. The fact is, they are not made in the interest of the public at all, but in the interest of those who have property in the neighbourhood of these open spots. If there be one thing your genuine English churl, male or female, hates, it is to see the less opulent classes enjoying themselves near their doors. Hence respectability will not pay so high rents in front of an open green or common as it will opposite a garden. I believe the inclosing these commons and greens is an invasion of public right, which I hope some one of our senators will have the courage to denounce. What is sauce for the goose is sauce for the gander; and soon the all-improving spirit will extend from the greens and commons of populous London to the less populated districts; and we shall have Hampstead Heath laid out as a garden, and Wimbledon Common as a park, with Crimean heroes to keep the public on the gravelled paths. What we really want in London are temptations to draw our artisans out of the public houses, and their wives and children out of their ill-ventilated rooms into the open air. If they can be made to go to the new gardens, where seats are most sparingly erected, and induced to walk up and down the gravel paths, so much the better; but this is not what the improvers want: their primary object is to drive away the rabble. What I want is, to see the working men and women and their children at home in the parks; and there must be something to draw them there: there must be space to play about. Cricket, croquet, balls, skipping, and all other amusements, should be encouraged where there is space enough. But this is not what is being done.

Medicus.

THE DECORATION OF ST. PAUL'S CATHEDRAL.

Sir,—In an article in the *Builder* of October 10th, instant, it is observed, with reference to the decorations of St. Paul's, "What is done is timidly poor and sadly ineffective, and we fear that what is intended, so far as we can learn, will be equally so. St. Paul's needs colour and fine art." Your kind sympathy in this national work calls for a short explanation on these heads.

No one can feel more strongly than those engaged on the work, that what is done is poor and ineffective, if considered by itself; but this is not necessarily a fault in a work in its commencement. I beg, moreover, to assure you, that the most earnest desire is felt for colour and fine art, but such works need time and funds for their achievement.

F. C. Penrose.

St. Paul's Chapter-house.

NON-DRYING OIL.

Will you allow me, through your medium, to ask whether any of the subscribers of the *Builder* can help me out of a difficulty arising out of the cause heading this note (non-drying linseed oil)?

I have recently completed a painting job, where the seats and backs of the pews have not hardened. The work appeared all right for some days, and then gradually softened, and in the end, after trying an extra coat of hard-drying varnish, as a matter of credit, I have had all scraped off and redone. For the first two coats were used mineral turps, best quality, and oil; for the oak ground and graining colour, American turps and oil.

I suppose the cause to exist in the use of the mineral turps; and in a similar but, unfortunately, larger job (a church), I have, in consequence, used nothing but American turps, with oil in equal proportions, and much extra dryer. The inside of the pews is plain colour. For two or three weeks the work was passably hard, but gradually softened, becoming quite sticky to the touch or pressure of the hand. I have flatted over it with sugar of lead and varnish to help the hardening, but the surface is again soft. I shall be glad if the experience of any of your readers can suggest a remedy other than scraping all off; as, apart from the expense, the building would require closing again. I shall also be glad if you can name the manufacturer of a really genuine linseed oil, as it will not only be a great boon to the trade, but to the public, who equally suffer.

Victim.

*** Readers will remember that the linseed oil question was discussed at great length in our pages some time ago, and the position of the trade exposed. It is to be regretted that improvement has not followed.

GOVERNMENT SCHOOLS OF ART.

In the report of the Stoke School of Art, in the *Builder* of the 10th inst., Mr. Cole makes some remarks on the new minutes of the council with respect to the payments to art masters. As the prosperity of these schools is of great interest to the public, perhaps you will allow me to make a few comments on the subject. In the new minutes, the Committee of Council have entirely carried out the system of payment on results, but these "payments are only in respect of students who are artisans, or who are engaged in some industrial occupation." Mr. Cole is reported to have said—"This will not injure such as the Stoke School, where the pupils are almost entirely composed of artisans; whereas schools like that at Exeter would be the losers, the pupils in the school in that city, and some other places, belonging almost entirely to the middle classes." This sounds very well, and will likewise tell in a Parliamentary report, but it also raises the question as to the object the Department ought to have in view in granting assistance. If I am correct in supposing it should be raising the standard of art in this country at the least possible cost, I question whether this is the right way to do it. As it is a fact that it is no difficulty with the manufacturer to get good designs, or workmen to carry them out, but to find a *demand* for good designs, as showiness and novelty are more saleable, I do not think it wise to injure such schools as that at Exeter, where the middle classes, the great consumers, can receive good art instruction. It is an old saying, that if there were no receivers there would be no thieves; and I think it equally true that if there are no customers there will be no good designers. The principle of paying only on artisans is no doubt good, but is it just to the art master? The Department obliges him to have a class to meet three evenings in the week, two hours each lesson; terms, not more than 6d. per week. This class in some towns is chiefly composed of the middle classes, and how is the art master to prevent it? I have a class in my school at higher terms, but of course most of them prefer the lower; and I think it only right for payments to be made on all who belong to the artisans' class, as an equivalent for the low fees fixed by the Department. If this, or something to compensate for the withdrawal of payments on certificates be not granted, the best masters will resign their appointments: I see, by the *Art Journal*, Mr. Kyd, at Worcester, has already done so. I inclose my card, but for obvious reasons only sign myself,

An Art Master.

PORTLAND CEMENT.

Your correspondent, "Cautious," asks, what is "that something else" into which the ingredients of Portland cement, lime, and clay, are converted by burning? and then, what are the distinguishing peculiarities which should render Portland a permanent substitute for Roman cement?

We reply by saying, that, according to the generally accepted theory, lime and clay pass by the agency of heat into a double silicate of lime and alumina, and that the hardness and durability of the cement depend upon the manner in which the combination is effected.

To render it complete, the ingredients—lime and the silicate of alumina—must exist in such proportions as to be capable of being exactly combined by calcination, which, in its turn, must be carried to the point needed to effect the combination, and no further.

The silica can only take up a definite proportion of lime and alumina. If the lime be in excess, a certain portion will remain uncombined, and left free to slake by the action of water, or even of the atmosphere only, after a certain interval, and then will follow disintegration of the mass and the results mentioned by your correspondent.

An excess of clay (*i.e.*, silica and alumina), on the other hand, leaves an uncombined and inert residue, which acts simply as an adulterating medium, like sand, besides interfering with the proper calcination of the material. Chemical theory and practical experience agree in showing that the proportion of lime to clay in water-resisting cements should be at least as two to one, and that the calcination should be carried to the point of incipient vitrification.

Now, testing the two cements under consideration by these standards, it is found that the stone of which Roman cement is made does not fulfil the needed conditions; for, though composed of lime and the silicate of alumina, the proportion of the latter preponderates to such an extent as to prevent a perfect amalgamation of the ingredients in burning; and the result is, a cement loose in its texture (because containing inert foreign matter), which is retentive of moisture, and consequently attackable by frost and vegetable growth.

But in Portland cement the case is otherwise. The dose of lime to clay is in the ascertained right proportion of two to one, and with this condition comes the power thoroughly to combine the ingredients by burning, and thus to give a density and compactness to the product which, in enabling it to resist water, frost, and other decomposing agencies, are the elements of its durability, and of its superiority to the natural cements.

It is confessed that a composed cement, involving many processes and much care in its fabrication, is more open than the natural cements to the mischances arising from the carelessness of the workman or want of knowledge on the part of his

employer; thus producing, by an improper mixture of the ingredients, or by an imperfect calcination, the disastrous effects before adverted to.

A still more constant cause of grief, however, to Portland cement is its bad manipulation and unfair handling when used as a *stucco*; for as a mortar and as concrete it is seldom known to fail.

Notwithstanding which drawbacks the public verdict has been so unmistakeably pronounced in its favour, that the fabrication of Roman cement has practically fallen to nothing; and it is hardly probable now, after twenty years, during which time its properties have been most searchingly tested by English and foreign architects and engineers, that this verdict will be easily reversed, or issue in a "nine days' wonder."

J. B. White & Brothers.

MUSIC AND THE DRAMA.

Royal English Opera.—Begin to analyze Mr. Wallace's new opera, "The Desert Flower,"—look for local colour, music to tell the story, consistency, a melody that haunts you, or poetry in the book, and the whole thing falls through. It is inferior to his "Amber Witch," "Lurline," or "Love's Triumph." Nevertheless, he has given Mr. Harrison, Mr. Weiss, and Miss Pyne some agreeable solos, that please the public, so that it will doubtless run a fair course. A repetition of some of the airs by each of these singers is compelled each night. There are two vigorous Indian dances; and there is one scene for the second act, an American forest, with a rocky pass at the back, and water across, while an uprooted tree forms a rude bridge, which is as good of its kind as was ever painted and set. A second and very beautiful effect is obtained by the rising of the moon.

Royal Gallery of Illustration.—It is remarkable that in this country, where music is so generally cultivated, no attempt should have hitherto been made to produce an "Opera di Camera,"—namely, a work of simple dramatic form, and requiring for its execution a limited number of vocalists, with the accompaniment of a pianoforte. To meet this want Mr. German Reed announces his intention to afford the public an opportunity of judging of the merits of the "Opera di Camera," by introducing in his next entertainment, on the 2nd of November, a work of that character, entitled "Jessy Lea," the joint production of Mr. John Oxenford, and Mr. G. A. Macfarren. The combination of these distinguished names gives us every reason to expect a successful experiment, and that it will lead to the permanent establishment in England of the "Opera di Camera."

KING INA'S PALACE.

Sir,—I should not have troubled you with a letter on this subject, had I not perused the scurrilous tirade signed "Joseph Chapman, Frome, Somerset," in your last number. It would perhaps stop further correspondence upon the subject, were your professional readers to know that it is not one of their number who has thus mutilated and disfigured an ancient work, or that could pen such a letter. Mr. Joseph Chapman should have appended to his name, "*Marble-mason and Tombstone-maker*, Frome, Somerset," and then the admirable criticism of "F.S.A." would be understood. I enclose my card. Another "F.S.A."

NOT CREDITABLE.

At a time when we see so much advancement amongst working men, when we learn with pleasure the progress of co-operative societies, clubs, and libraries, it is with regret that we note a most painful and disgraceful case—which it is the duty of all respectable workpeople to repudiate—which has been brought before the notice of the public, at the Wandsworth police court. For the most part, particularly of late, people have noticed the good demeanour of workmen when engaged in the repair or building of sacred edifices. When the preparations were being made in St. Paul's Cathedral for the funeral of the great Duke of Wellington, we never saw, during the night or in the day, although many visits were made, a man with his hat upon his head, or heard a single word spoken of a violent or irreverent nature; and the same may be said of other experiences; but at Tooting church, by some means which is not explained, one William Hooker, a carpenter, injured a plane which he had borrowed from one of his fellow workmen, and offered to replace it by another. This very fair offer was declined, and the owner of the plane insisted that Hooker should pay a fine of 2s. 6d. *for beer*. He refused to comply with this, and at dinner time the whole of the men set upon him, tied his legs, and pulled him up by a pulley to a height of between 12 and 15 feet. A cord was passed under his arms and between his legs, and they allowed him to hang, pulling him at intervals up and down until he called out "Beer," although Hooker had offered to buy a new plane. One held him fast round the body, while another tied his hands behind him: the legs were tied together, a rope with a slip knot placed under the body, and a threat was made that if the 2s. 6d. were not paid, the sum would be raised to 5s. Hooker was unable to remain in the position very long, as the cord was tight, and nearly took away his breath, and he was obliged to scream out "Beer." They then cut him down, but the ill-used man would not pay, and Henwood, the proprietor of the plane, took the 2s. 6d. from his hand. The beer was drunk, but Hooker would not touch it, and the next morning all the men made a strike against him, and he lost his job, and had not been able to get another. Very properly the parties concerned in this outrage were brought before the magistrate, and some of them were fined to the extent of 10s.; but in the course of the investigation Foster, one of the workmen, said, that when a man went into a shop he had to obey certain rules, which were time-honoured, and had descended from their forefathers, and were likely to descend to their children. We hope that Mr. Foster is wrong in this opinion, and that all well-conducted carpenters will combine in their exertion to put a stop to such proceedings as these, which are disgraceful, and out of harmony with the spirit of the age.

HOLBORN VALLEY IMPROVEMENT.

Sir,—In the *Builder* of Saturday last there appears a communication from Mr. C. H. Smith, advocating the formation of a new street from Newgate-street to Holborn, at the corner of Fetter-lane.

This proposed street seems, so far as, by Mr. Smith's description and in the absence of any plan, I am able to judge, to be identical with a street which I have proposed, and which forms a leading feature in the design which I have submitted in competition to the Improvement Committee of the Corporation of London.

I am not aware whether the same idea may or may not have occurred to other competitors, but inasmuch as I have been laboriously engaged since the date of the advertisement announcing the competition, in preparing a design on the basis of the street in question, which design was delivered before twelve o'clock on Monday last, it will, I think, be evident that as far as Mr. Smith and myself are concerned, I am entitled to claim the merit, if any there be, of the conception of this scheme. Mr. Smith, whilst recognizing the large and increasing traffic from the Metropolitan Railway Company's station in Victoria-street, which traffic will shortly be swelled by the erection of the markets in Smithfield, and the formation of a new street from thence to Victoria-street, and also, probably, by the establishment in that locality of a station or terminus by the Chatham and Dover Company, makes no provision in his proposal for this traffic, but seems to rely upon its passing up and down the present dangerous line of Holborn-hill and Skinner-street as a compensation to the inhabitants for the loss of traffic to be caused by the formation of the new high-level street. I have designed two short streets, running directly from the Metropolitan Station; one in continuation westward of the intended new street from Smithfield, entering High Holborn at Hatton-garden; the other, south-eastward, entering Skinner-street at the upper end of Snow-hill; thus providing for all the chief traffic, and so dividing it as to prevent confusion. And I consider that so far from the property in Holborn-hill and Skinner-street being depreciated by the formation of these streets, it would, by the general improvement of the district, and its connexion with the adjacent new lines of transit, be greatly raised in value. Frederick Wallen.

Sir,—I have just read in the *Builder* a suggestion by Mr. C. H. Smith for the improvement of the neighbourhood of Holborn valley, by the formation of a new high-level street at the back of the existing thoroughfares, and extending from the junction of Holborn and Fetter-lane to the junction of Skinner-street with Old Bailey.

Mr. Smith will be pleased to find that his project has been anticipated. Among the plans submitted, in competition, to the Improvement Committee of the City of London, is a design, embracing the principal features described in his letter, by N. S. Joseph.

DECISION UNDER METROPOLITAN BUILDING ACT.

At the Mansion-house, Messrs. Myers & Sons, the builders, were summoned to answer a complaint by Mr. John Young, the district surveyor, for that they, being builders engaged in the erection of a warehouse known as the Metropolitan Bonded Warehouse, in New-square, Minories, containing more than 216,000 cubic feet, omitted to divide the same in such a manner that the contents of such division did not exceed 216,000 cubic feet, as required by the Metropolitan Building Act, 1855, and unlawfully neglected to comply with the requisitions of a notice given by the complainant on the 10th of September last, requiring them, within forty-eight hours of the date of the notice, to do that which had been omitted contrary to the same Act.

The case occupied some considerable time. The building in question is situate in New-square in the Minories, and contains altogether 438,440 cubic feet divided into three sections of 199,800, 89,920, and 148,720 cubic feet; and the cause of complaint appeared to be that in these sections, although divided by fire-proof walls, the communications from one to the other were not provided with iron doors.

Mr. Young having signified that if the iron doors were erected he would consider the requirements of the Act complied with, it was promised on the part of the defendants that they should be erected, and the summons was allowed to stand over for six weeks; the works in the meantime to be proceeded with, and if completed to the satisfaction of Mr. Young, the summons to be considered as dismissed.

Books Received.

VARIORUM.

"Famous Ships of the British Navy; or, Stories of Enterprise and Daring" (Hogg & Sons), is the title of a spirit-stirring little volume by W. H. Davenport Adams. It has many illustrations, and closes with some account of Iron-clad Ships, by Mr. Barnaby.——*The Church Builder*. Rivingtons, London. The present number of this threepenny quarterly contains articles on Church Roofs; Seats in Churches, illustrated; the Churches of St. Bartholomew the Great, Smithfield; St. Michael, Gloucester; and Cilrheyden, Pembrokeshire, all illustrated; together with other matter interesting to various classes of readers.——*The Popular Science Review*. Hardwicke, London. This rising review contains, in the October number, papers on Fresh Air, by Dr. Lankester; on the Metropolitan Main Drainage Works, by Mr. S. J. Mackie; and various other interesting papers; besides separate divisions devoted to new inventions, books of the quarter, and a summary of scientific news. The first paper in the number is one on Photographic Printing and Engraving, by Mr. William Crookes, F.R.S., and is illustrated by a curious photolithograph of a complete page of the *Times*, distinctly readable, though on much less than the octavo size of the *Review* page.——Victoria Toto Cœlo; or, Modern Astronomy recast. By James Reddie, F.A.S.L. London: Hardwicke. 1863. This is an able but heterodox paper on the theoretical motions of the earth, sun, moon, and planets, which was submitted to Section A of the British Association for the Advancement of Science, at Newcastle-upon-Tyne, in 1863, but received,—as anything so heterodox, whether true or false, might well expect to be,—with awe-inspiring *silence*, indicative, it might be, of profound wisdom and disapproval, but—perhaps not. That profound thinker, S. T. Coleridge, upon one occasion, found himself seated, *vis-à-vis*, at dinner, with a silent guest, who ever and anon looked hard at him in the midst of some eloquent philosophical discourse, and occasionally shook his head in so dissentient and contemptuous a way, that poor Coleridge's talking conceit was almost taken out of him; till at length his dumb critic, suddenly digging his fork into a potato, jerked it into an upright position, with the evidently heartfelt ejaculation, "Them's the jockeys for me!" We do not mean to insinuate that Mr. Reddie's dumb critics are jockeys of this description:—no one who knows the names that were on the list of Section A referred to could for a moment think of doing so; but the anecdote may at least console the author with the reflection that, just as all is not gold that glitters; so, the deepest silence may not always indicate the utmost profundity of wisdom, nor the acme of enlightened and sarcastic disbelief. The object of Mr. Reddie's paper, and its appendices, is to show that the present astronomical theories have become involved in manifest contradictions; and this he does in a modest, gentlemanly, and forcible way. The Newtonian idol has just received an untoward shake from those who, themselves, work the oracle from within; and, both before, and now, it has been not a little further unsettled on its pedestal. We have great respect for the name of Newton; but his worshippers have sunk into a fatuous state of mere scientific idolatry; and it is full time astronomy were freed from the fetters of so debasing a condition. We therefore welcome every glimpse of manly independence of thought, such as Mr. Reddie's, even irrespective of any very decided belief, either *pro* or *con.*, on certain points in question between him and his opponents. There is one leading idea of his, however, with which we feel much inclined to agree; namely, that something very like, at least, to magnetic or electro-magnetic attraction *and repulsion* are displayed in the cosmical phenomena. Gravitation may very well account for the formation of elliptical orbits, but those of the planets display a tendency to circularity which only a repulsive force in conjunction with an attractive seems to be capable of accounting for. And this was to a certain extent the opinion of a celebrated and otherwise orthodox professor of astronomy, Professor Nichol, of Glasgow; who at least suggested that gravitation did not account for such orbits; and therefore, thus quietly hinted a very significant and serious doubt as to first principles in general, which he dared not more boldly or fully express.——The Electro-Magnetic Phonograph. By J. B. Fenby, Worcester: printed by Holl & Darke, Herald Office, High-street.—In this pamphlet an account is given of an ingenious machine, already noticed by us, for attachment to piano fortes, organs, and other keyed musical instruments, by means of which a professor or amateur who can extemporize may produce a printed copy of his original ideas, both in melody and in harmony. The machine is worked by the power of a small voltaic battery; so that there is no weight or pressure on the keys, the movements of which complete and break the electric circuit, and so work the printing apparatus. The method of electro-magnetic notation has been purposely copied from Morse's telegraphic alphabet. The invention is otherwise patented.

Miscellanea.

Water-pipes.—Wrought-iron water-pipes, ned and coated with hydraulic cement mortar, re in use in San Francisco. These pipes have pigot-joints, can be back-filled as soon as laid, nd capped in the same manner as cast-iron pipes.

The Wellingtonia Gigantica?—A tree, it said, has recently been cut down in California, he circumference of which was 90 feet, and its eight 325 feet. The bark was in some places feet thick. The tree contained 250,000 feet of imber. Its age is estimated to have been not ess than 3,100 years. The wood was sound and olid.

The Irish Exhibition of 1864.—The organiation of this enterprise is making satisfactory rogress. In various parts of the country meetngs have been held in furtherance of the movement, and in every instance the proposal has been avourably received. Messrs. Bagot & Walker epresent the Royal Dublin Society, under whose uspices the exhibition will be held.

Ventilation through Windows.—A patent as been taken out by Mr. Thomas Boyle, lighting nd ventilating engineer, for a plan of ventilation y means of holes inserted at the top and bottom f window-sashes, the upper for the escape of foul nd heated air, and the lower for the ingress of resh and cool air from without. The plan is imple, but not new. An account of it has been ssued in a printed form by Messrs. Comyn, Ching, & Co., of Castle-street, Long-acre, gas engineers o her Majesty.

Colliery Ventilation.—A successful trial, it s said, of a machine for this purpose has been nade at Bonville's Court Colliery, near Tenby. The machine is a large circular fan, improved and constructed by Mr. Waddle, of the Laumore Works, Llanelly, of 18 feet diameter, by 4 feet breast, and is so arranged on the surface over the upcast shaft that it absorbs all the foul air and gas from the colliery without any leakage, and thus, probably, may supersede the large furnace at the bottom of the shaft, which is so often placed in much dangerous proximity to these large reservoirs underground. This fan-wheel is driven by a steam engine of 18 inches cylinder and 20 inches stroke, producing an average of 120 revolutions per minute in the fan.

Pig-Iron.—The computed make of pig-iron in England and Wales last year was 2,863,469 tons, against 2,763,390 tons in 1861, 2,889,752 tons in 1860, and 2,273,243 tons in 1854. The make in Scotland last year was computed at 1,080,000 tons, against 1,040,000 tons in 1861, 1,000,000 in 1860, and 775,000 tons in 1854. The total make for the United Kingdom consequently advanced from 3,048,243 tons in 1854 to 3,943,469 tons in 1862. The number of furnaces in blast last year was 556, against 568 in 1861, 589 in 1860, and 554 in 1854. The average price last year was 35s. per ton, against 49s. 3d. per ton in 1861, 53s. 6d. per ton in 1860, and 79s. 9d. per ton in 1854. Of the 556 furnaces in blast last year, 436 were in England and Wales, and 120 in Scotland.

Drilling Apparatus.—This invention, a communication to Mr. Hughes, of Chancery-lane, relates particularly to the brace used by joiners and other operatives; and the improvements consist in attaching to it a spring by means of a small screw. The spring is slightly hollowed at one of its ends to receive a pin, having a hollowed part to allow the passage of the bit or drill; which pin, by means of the spring, is forced through the socket of the brace, so that it may enter the groove cut in the head of the bit or drill, in order to secure it in the socket and prevent its falling out; and when the bits or drills have to be removed or replaced, the hollow part of the pin is made to correspond with the hole in the socket. The sockets can be made of various forms, and either bored or slotted internally to gauges, so that any kind of bit or drill corresponding with its intended socket may enter it easily.

Nicholas Hilliard.—The name of this eminent miniature painter is familiar to all lovers of English art. A writer in *Notes and Queries* says,—"From the following memorandum, annexed to a particular for lease of the manor of Poyle, in the parish of Stanwell, co. Middlesex, dated 1587 (Augmentation Office Records), it appears that he was the engraver of the Great Seal employed at that period:—

'Memorandum, &c.—The said Lease to be for 21 yeares to the said Hilliard, in consideration of his paines in engraving ye Great Seale of England.

Fr. Walsingham. W. Burleigh.'"

The Architectural Association.—We would point attention to the circumstance that the opening *conversazione* of the Association will be held on Friday evening next, October the 30th. A good list of papers for the fortnightly meetings has been arranged.

Working Men's Dwellings in France.—Count de Madre, in Paris, has built twenty-five great houses for workmen, and let them in flats, consisting of sitting-room, bed-room, and kitchen, at a rent of three shillings a week. All the tenants have the use of a courtyard as playground, and a grand central hall is to be erected for the use of the workmen's wives. The count pledges himself never to increase the rent of a tenant, never to eject one except for non-payment of rent, and never to distrain on furniture. The experiment has now been tried for two years, and the result is a profit of 6½ per cent. The count is about to erect other large buildings on the same plan and for the same object.

Gas.—The prospectus of a limited Nottingham and District Gas Consumers' Company has been issued. The capital will be 100,000*l.*, in 10*l.* shares, deposit 10*s.* a share. The company has been projected by large consumers for the purpose of supplying the town of Nottingham and the surrounding district with gas of a purer and more brilliant character, and better adapted for manufacturing and domestic purposes, than that hitherto supplied; and at as low a charge as is attainable by the adoption of the most recent improvements in its manufacture, and consistent with a fair return for the capital employed. Calculations have been made that, charging for gas at a great reduction on the present scale, a dividend of 8*l.* per cent. will be realized upon the shares; and although the maximum rate allowed by Parliament is 10*l.* per cent., it is proposed to pay all money beyond 8*l.* per cent. in aid of such rates in the town as may be afterwards determined upon.

Schools of Art.—The chief stone of the Nottingham School of Art, now in course of erection in Waverley-street, of that town, was to be laid to-day (Thursday), by the Duke of Newcastle, lord-lieutenant of the county, with Masonic ceremonial.——The annual inspection and examination of the works of students in the Cork School of Art, for this year, has taken place, under the direction of Mr. Eyre Crowe, inspector from the Science and Art Department at South Kensington. While in the Dublin School but fourteen medals were awarded by Mr. Crowe, and but three selected for national competition, and in the Limerick only five medals were awarded, the large number of nineteen medals has been awarded to the Cork School, of which nine have been selected for national competition. On this occasion the competition for local prizes, 10*l.* from the Earl of Cork, and 25*l.* from the mayor of Cork, for the best works, in specified stages, and executed by various classes of the community, was decided. The students, it seems, have worked with diligence, and the result reflects much credit on the master, Mr. Brenan.

The Hotel Movement. — The latest hotel company is the "South Blackpool," with a capital of 50,000*l.* in 5*l.* shares. Blackpool, in Lancashire, is a favourite resort of the people in the North when they recreate at the sea-side. The proposed erection, it is said, will be on a good site. In Ireland, hotel companies have attracted attention, but less than in England. However, some progress has been made. A new hotel "on a splendid scale" is to be erected in Kingstown, upon a site overlooking the harbour, and in connexion with the Royal Hotel. It has also been determined to form a company for the erection of a new hotel at Foxrock, between the Stillorgan and Carrickmines stations on the Dublin and Wicklow Railway, within easy distance of Kingstown and Bray. The Bois de Boulogne Hotel and Land Company advertise as being incorporated under "The Companies' Act, 1862," with limited liability, and under a convention concluded between her Majesty and the Emperor of the French. The objects of the company are to carry out a concession granted by the proper authorities, conferring the right to purchase compulsorily certain properties, comprising an area of about 120 acres of freehold land at St. Cloud, near the Bois de Boulogne and Paris, and to construct there Boulevards on the same; to erect a first-class family hotel; and to sell the remainder of the land; which, after deducting that required for the hotel and boulevards, will consist of about 100 acres, for villa residences. This hotel at St. Cloud is, it is said, to be to Paris what the Star and Garter at Richmond is to London.

New Houses in Durham.—At a meeting of the Board of Health, on Monday last, plans were passed for the erection of about 250 new houses. These houses, which have been designed by Mr. Ebdy, architect, will form seven streets. The houses in Wharton-street, Cross-street, East Cross-street, and Sutton-street, will be let for about 15*l.* a year; and the houses in Flass-street, Cail-street, and Ainsley-street, for about 8*l.* a year.

Large Gas-holder at the City Gas Works. For some time past numerous workmen have been engaged in erecting a vast gas-holder at the premises of the City of London Gas Company, Whitefriars. It is a three-light gas-holder, and has (except the painting) just been completed. The works connected with it have been carried out by Messrs. Westwood & Wright, of Dudley, gas-holder builders. When full it is of the great height of 100 feet (the highest ever built). Messrs. Westwood & Wright are now engaged in constructing extensive new works at Para, in Brazil, which are rapidly progressing.

Safety in Cleaning Windows.—The frequent and fatal accidents from cleaning windows outside have led to various endeavours to obviate such accidents, and among these patents have been taken out for Gurman's sash-pocket and fittings to balance and weight sashes. By these simple means, as stated, "a common-sized window of two sashes may be taken out in one minute and replaced in the same time, without removing the beads, damaging the frames, or disfiguring the painting. A new line may be replaced in a few minutes by any person, where it now takes a skilled carpenter a quarter of a day, besides disfiguring the painting by driving in fresh nails where the room is nicely grained. If a square of glass be broken, it can be put in without a ladder or getting outside on a machine. The windows can be painted without ladders. All old windows can be altered."

Accidents.—A wall in St. John's Churchyard, Chester, has fallen, in consequence, says the local *Chronicle*, of "the late rains loosening the foundation, assisted, no doubt by the shock of the earthquake."——In Hereford, we hear, some chimneys fell upon that occasion, but no serious accident appears to have been occasioned by the earthquake; which, by the way, the writer of this distinctly felt in Holloway, and immediately noted it down as a slight shock of earthquake, or earth-wave rather. Once before, at Glasgow, about twenty years since, he experienced just such a shock.——An inquest has been held at the Sussex County Hospital on the body of a bricklayer's labourer, who died from the effects of injuries received by a fall from a scaffold, whilst at work in a house belonging to Mr. Banks, builder, of Hove Villas, Cliftonville. On a scaffold inside the building over a staircase, some 36 feet from the ground, were several hods of mortar and bricks, which, together with the weight of men and boys, caused the putlog to break, and to pitch deceased on to a joist about 10 feet from the ground. The poor man clung to the joist for a minute, and then fell into the arms of a fellow-workman. He was taken to the County Hospital, where he died. The jury returned a verdict of "Accidental Death."

Building Societies' Demonstration. — A monster meeting of various building societies on the Bowkett system established in London and the suburbs took place on Thursday night in the Agricultural Hall, Islington. There were more than 3,000 persons assembled. Mr. R. B. Starr, the secretary, read a statement to the meeting, detailing the progress of the several societies. From the statistical statement, it would appear that there were twenty-one societies now in operation, five of which were still incomplete. The total number of members in the twenty-one societies was 7,055; the number of shares issued was 17,641; cash paid up, 38,687*l.* 17*s.* 3*d.*; the number of houses purchased by working men was 192; the amount of cash in hand for appropriation was 5,946*l.* 15*s.* 3*d.*, to be advanced during the next three months; the amount of cash repaid on account of appropriations was 11,626*l.* 1*s.* 5*d.*; the amount due on return of appropriations was 30,321*l.* 14*s.* Dr. Bowkett gave an elaborate description of the working of the societies, and drew a comparison between building societies and co-operative stores, contending that as the published results showed that ten per cent. was realised by their building societies, ten times ten could be realised by the working men if they would, as they might, establish co-operative stores, where their profits were continually accruing, and the ten per cent., instead of being upon the year's transactions, was realised every week.

The late Accident at the Wesleyan Chapel, Brixton-hill.—Sir: As the builders carrying out the works in enlarging the size of the above place of worship, we wish to give some explanation as to the real cause of the disaster. The tie-beam which broke was 65 feet in length, 14 inches by 7 inches, and of the best Memel timber, and quite new. The temporary iron "tension rod" gave way, although of good iron, and the beam broke in its weakest part, where mortised, &c., to receive the king-post and binder. At the inquest held upon the deceased, no blame was attached to ourselves. We have seen many reports in the newspapers attributing the cause of the accident to the beam being of old timber, and wrong constructions put on the matter altogether.—Duncanson & Moultrie.

New Rock-Boring Machine.—An improved mechanical drill, which is calculated to materially facilitate progress in mining and quarrying operations, by completely superseding the ordinary slow and laborious process of hand-boring, is being introduced by Mr. W. C. Harrison, of Pimlico. The machine can be driven either by men or by steam-power, according as the one or the other may be at disposal: it stands on a base 7 feet by 2 feet 8 inches, and is 5 feet 6 inches high. The machine is stated to have worked very successfully in boring holes from 1 inch to 2 inches diameter; and that the rate of 10 feet to 16 feet an hour, depending upon the quality of the slate or other material being operated upon, has been maintained. Amongst the advantages claimed for the machine, may be mentioned the circumstance, that without deranging the framework the boring-bar can be set higher or lower, or at any angle that may be required above or below the horizontal line.

The Croydon Surveyorship.—At a recent meeting of the local board of health, in consequence of the surveyor, Mr. Fenton, having resigned, Dr. Carpenter stated, respecting their power to discharge their surveyor without the sanction of the Secretary of State, that under the 8th section of the 21st & 22nd Victoria they had full power, without bringing down an inspector and instituting an inquiry. Mr. W. Drummond said, on the last occasion when they advertised for a surveyor, there was only three weeks' notice given. It was stated in the last advertisement that he should give his whole time to the Board. By that was meant that he should not engage in any other business but that of the Board. He considered that the surveyor should know his hours. Mr. Crowley thought he should know what were to be his duties. The details of the surveyor's duties were then gone into, and it was resolved that a surveyor should be advertised for in the *Times*, *Standard*, *Builder*, *Telegraph*, and the local papers, and that his salary should be 400*l.* a year, the Board allowing a small sum for an assistant.

Railway Matters.—The traffic receipts of railways in the United Kingdom amounted, for the week ending the 3rd of October, on 10,882 miles, to 638,616*l.*, and for the corresponding week of last year, on 10,428 miles, to 615,434*l.*, showing an increase of 454 miles, and of 23,182*l.* in the receipts.——On the Midland railway, at Kegworth, there is a new signal, consisting of a clock, with a face 4 feet in diameter, placed on the top of a column 15 feet high. Only a quarter of the clock is shown, which is formed of ground glass, with red figures 0.5.10.15., and has only one hand. Attached to the clock is a long rod connected with a treadle about 16 feet long, which lies along the inside of one of the rails. On the train passing over the treadle it is depressed slightly by the wheel flange, and the clock hand is set at liberty, and is so adjusted by a counterpoise that it is turned to the figure 0. Immediately the train has passed over, the hand begins again to mark the time up to fifteen minutes, when it is stopped, thus indicating to the next train exactly how long, up to fifteen minutes, the preceding train has passed the signal. The same clock works two faces, one for the up and one for the down line. The signal is illuminated at night. The inventor of this contrivance, according to the *Mechanics' Magazine*, is Mr. John King, lace manufacturer, Heanor.——Recent accounts from Barcelona state that a serious accident had occurred on the railway from Barcelona to Granollers. The bridge thrown over the Hahern having been undermined by the violence of the torrent, increased by heavy rain, had suddenly given way during the passage over it of a railway train coming from France, composed of nine carriages. The locomotive and seven carriages were thrown into the river. Many dead bodies had been recovered, but the corpses of the others had been carried away by the torrent.

Distribution of Prizes at Painters' Hall. A meeting of the Court and Livery of the Worshipful Company of Painters, has been held at the hall, Little Trinity-lane, Cannon-street, when the prizes gained by the successful competitors at the annual exhibition of works of decorative art, held recently at the hall, were distributed. The Master, Mr. D. G. Laing, presided. The following were the recipients of the prizes:—For graining, Mr. A. Tyndall, silver medal; for marbling, Mr. C. Ross, silver medal; for writing, Mr. W. J. Cloake, silver medal; for decoration, Mr. F. Spottiswood, silver medal; a bronze medal each to Mr. S. Burnby, for graining; Mr. C. Hewett, for writing; Mr. H. Goodwin, for marbling; Mr. J. J. Lovegrove, for decoration. To each of the following a certificate of merit:—Mr. J. Graham, Mr. A. Tyndall, Mr. J. Tuffill, and Mr. J. G. Howe—the works for which the awards were given being (according to the order of the names) graining, marbling, writing, and decoration.

TENDERS.

For the erection of two hop warehouses, on Guy's Hospital Estate, Great Maze Pond, Southwark, for Mr. Thomas Thornton. Messrs. Newman & Billing, architects:—

Brass	£8,279 0 0
Thompson	8,260 0 0
Ashby & Sons	8,114 0 0
Axford & Co.	8,100 0 0
Downs	7,996 0 0
Lawrence & Sons	7,993 0 0
Wells	7,890 0 0
Peake	7,775 0 0
Rider	7,460 0 0
J. J. & F. Coleman (accepted)	7,358 0 0

For the erection of the Cliff Hotel, Scarborough. Mr. Cuthbert Brodrick, architect. Quantities supplied by Mr. Austin:—

Simpson & Malone	£77,548 0 0
Kirk & Parry	77,260 0 0
Robinson	75,000 0 0
Shaftoe & Barry	74,132 0 0
Addy	73,488 0 0
Myers & Son	72,850 0 0
Weatherby	66,428 0 0
Climie (accepted)	66,000 0 0
Neild	49,426 0 0

For the erection of a veterinary establishment in St. Giles-street, Norwich, for Mr. D. Sayer. Mr. James S. Benest, architect. Quantities supplied:—

Youngs & Breeze	£1,259 0 0
Balls	1,252 11 0
Downing	1,250 0 0
Murray & Son	1,240 0 0
Brooke & Wiseman	1,225 0 0
Spinks & Wright	1,200 0 0
Browne & Bailey	1,183 0 0

For the church of St. John the Evangelist, at Masborough, near Rotherham. Mr. William White, architect. Quantities supplied by Mr. Samuel Field:—

Woodward	£3,323 17 7
Harper	3,159 0 0
Anclay	2,938 13 11½
Ripley (accepted)	2,850 0 0

For building the new Church of St. John the Evangelist, Middlesborough, Yorkshire. Mr. John Norton, architect:—

	Church.	Tower and Spire.
Hodgson	£3,850 0 0 ..	£1,400 0 0
Laws	3,669 19 6 ..	1,549 0 0
Fidler & Ingram	3,445 0 0 ..	1,560 0 0
France (accepted)	3,646 0 0 ..	1,068 0 0

For the erection of stables and dwelling-houses, in Goswell-street, for Messrs. Copestake & Co. Messrs. Tress & Chambers, architects. Quantities supplied by Mr. Raggett:—

Brown & Robinson	£9,452 0 0
Coleman	9,122 0 0
Sewell & Son	8,776 0 0
Brass	8,558 0 0
Conder	8,498 0 0
King & Sons	8,490 0 0
Lawrence	8,422 0 0
Ashley	8,379 0 0
Macey	8,337 0 0

For alterations at the Tiger public-house, Wells-street, Oxford-street, for Mr. Hartley:—

Hyde	£195 0 0
Martin	187 4 6
Fox	133 0 0

For fencing in the Ipswich and Suffolk Freehold Land Society's Estate, at Ipswich. Mr. James Butterworth, surveyor:—

Graystone	£245 0 0
Goold	232 10 0
Haxell	214 10 0
Garnham	208 13 4
Hobart	208 0 0
Singleton & Morgan	205 0 0
Reeve	205 0 0
Trew	199 15 0
Turner	199 10 0
Card	199 10 0
Shulver	199 0 0
Reeve (accepted)	197 0 0
Ward	195 4 6

For the erection of a dwelling-house, at Ratcliffe-on-Trent, near Nottingham, for Mr. E. Green. Mr. S. Dutton Walker, architect:—

J. & W. Smith	£634 10 6
Wright	600 0 0
Ward, Ansell, & Co.	579 0 0
Lamb & Stevenson	505 5 5
Gilbert & Wood (accepted)	499 10 0

For a residence at Poyle-hill, Surrey, for Messrs. H. & F. Chester. Messrs. Eggar & Stapley, architects:—

G. Goddard	£2,347 0 0
Marsland & Son	2,222 0 0
Goddard & Son	1,973 0 0
Sharpington & Cole	1,877 0 0
Birch	1,869 0 0
Martin	1,790 0 0
Duke	1,754 0 0

For brick and pipe sewers, about 14,000 yards in length, for Ealing Local District Board. Mr. Charles Jones, surveyor:—

Moxon & Co.	£22,453 0 0
Hayes	22,325 0 0
Bird & Co.	22,046 0 0
Edis	15,987 0 0
Messrs. Williams	15,820 0 0
Robinson	15,795 0 0
Pope	15,488 0 0
Hill & Co.	15,315 0 0
Haynes & Co.	15,314 0 0
Dethie	15,097 0 0
Crockett	14,348 0 0
Pearson	14,159 0 0
Mann & Co.	14,049 0 0
Rogers	13,981 0 0
Sharon & Pezzy	13,871 0 0
Coles & Son	12,842 0 0
Porter	11,732 0 0

For alterations and new frontage to No. 2, Broadstreet, Bath. Mr. C. J. Phipps, architect:—

Greenman	£452 0 0
Ridout & Long	432 0 0
Rawlings	412 0 0
Mercer & Son	397 0 0
Bussell	397 0 0
Aust	395 0 0
Higginson & Cavill	383 0 0
Bishop	381 0 0
Backhouse	376 0 0
Francis	365 0 0
Wibley	359 0 0
Mann (accepted)	317 0 0

Accepted for new dining-rooms, &c., exclusive of the decorations, for Messrs. Fortt & Son, Milsom-street, Bath. Mr. C. J. Phipps, architect:—

Carpenter's Work.

Bullin	£188 0 0

Mason's Work.

Bladwell	£85 0 0

Plumber's Work.

Kerslake	£42 10 0

Painter, Glazier, Slater, and Plasterer's Work.

Pryor	£111 0 0

Fittings.

Wadman, Brothers	£105 0 0

Stoves, Furnaces, Steam-Boilers, &c., including fixing.

Williams	£100 0 0

For painting and decorating Laura Chapel, Bath. Mr. C. J. Phipps, architect:—

Bussell	£146 0 0
May & Son (accepted)	105 0 0

Accepted for building five cottages at New Islington, Manchester, for Mr. James Grantham. Mr. Thomas Dale, architect:—

Tims & Son	£548 0 0

Accepted for building boundary-wall, and a cooking and dining room for the work-people, at Millhill Cotton Works, Lowerse, near Blackburn, for Messrs. Hodgkinson, Swain, & Codling. Mr. Thomas Dale, architect:—

Bricklayer and Excavator's Work.

Charnley	£357 0 0

Mason's Work.

M. & J. Leigh	£63 0 0

Carpenter and Slater's Work.

Stones	£103 0 0

Accepted for building two pairs of semi-detached houses, at Higher Crumpsall, for Mr. William Smith. Mr. Thomas Dale, architect:—

Carpenter and Joiner's Work.

Lean	£906 0 0

Bricklayer and Excavator's Work.

Whittaker	£476 0 0

Mason's Work.

Knowles	£276 0 0

Plasterer and Painter's Work.

Connell	£239 0 0

Plumber and Glazier's Work.

Alsop	£273 0 0

Slater's Work.

Barrow	£75 0 0

Ironmonger's Work, &c.

Wilson	£116 0 0

For re-building No. 36, Chancery-lane, for Mr. Snell. Mr. Blythe, architect:—

Fowler	£1,400 0 0
Mathews	1,392 0 0
Burton	1,390 0 0
Piper & Wheeler	1,229 0 0
Ashby & Sons	1,211 0 0
Clemence	1,209 0 0

KEYNSHAM BLUE LIAS LIME and CEMENT WORKS, SOMERSET.—TO BE SOLD by PRIVATE CONTRACT, by order of the Liquidator, the newly-formed FREEHOLD WORKS, occupying a site of 7a. 2r. 26p. or thereabouts. The existing kilns and works are capable of producing 700 to 800 tons of Lime and 120 tons of cement weekly, both products being approved of by large contractors and eminent architects, the cement being used in many of the Government fortifications now in progress. The buildings are very substantial and the machinery is of the best description, driven principally by water power, but with steam power as auxiliary. Coals can be supplied to the works at a very low price, and the Great Western Railway Station is within a short distance.—For further particulars apply to Messrs. N. LINDS & SONS, Solicitors, 47a, Moorgate-street; or F. MAYNARD, Esq. Liquidator, 19, Bread street, Cheapside; and of Messrs. FULLER & HORSEY, 13, Billiter-street, London.

BATTERSEA. — Between Clapham and Battersea Park. — To BUILDERS and OTHERS. — LONG HEDGE FARM ESTATE TO BE LET on BUILDING LEASES direct from the Freeholders, at moderate ground rents. This property lies on either side of the Queen's-road extension, Battersea to Clapham, and immediately adjoining the Works of the London, Dover, and Chatham Railway Company, and the Wandsworth road and Station, where houses are in great demand. Roads and Sewers now forming. The Low Level Sewer in course of construction will effectually drain the whole of this district.—For plans and further particulars apply to Messrs. COVERDALE, LEE, COLLYER-BRISTOW, & WITHERS, Solicitors, 4, Bedford-row, W.C.; to Mr. CHARLES LEE, 20, Golden-square; or to Mr. R. J. WITHERS, 31, Doughty street, W.C.

LEE, KENT.—LAND TO BE LET, by the Merchant Taylors' Company, on Building Leases of 88 years from Michaelmas, 1866, by TENDER, to be addressed, before the 31st OCTOBER next, to SAMUEL FISHER, Esq. Solicitor, Merchant Taylors' Hall, Threadneedle-street, London, of whom particulars, with a plan, may be obtained. The Company do not bind themselves to accept the highest or any Tender.

ELIGIBLE FREEHOLD BUILDING LAND, in KENT, within one mile of two stations on the North Kent Railway, and thirty minutes' ride thence to London Bridge and Charing cross. TO BE LET or SOLD, in large or small plots, from TEN to TWENTY ACRES of MEADOW LAND, on the High London road to Erith, admirably adapted for gentlemen's residences and villas, delightfully situated, with fine views of the country and River Thames, near a church, gravelly soil, good water and gas and down. Ground rent moderate.—Apply to Mr. DAVENPORT, Land and Estate Agent, 33, Bucklersbury, City, E.C.

WATFORD, HERTS.—TO BE LET on BUILDING LEASES, several PLOTS of FREEHOLD LAND, in the most central of the above town, in close proximity to the Station, and on the new roads recently made.—For plans and particulars apply to Mr. EDWARD H. BURNELL, Surveyor, 37, Bedford-row, LONDON, W.C.

GROUND in BASINGHALL-STREET, now occupied by Houses and Warehouses, known as Nos. 20 and 21, Basinghall street, TO BE LET by TENDER, for Building purposes. A plan of the ground and form of Tender may be obtained at the Offices of EDWARD PANSON, Esq. No. 7, Lawrence Pountney-hill, Cannon-street; or of Messrs. HOLLINGSWORTH, TYRRELL, & GREEN, No. 24, Gresham-street, London; where Tenders, under seal, are to be delivered on or before the 1st DECEMBER next. The Owner does not bind himself to accept the highest or any Tender.

BUILDING LAND, Ealing.—TO BE LET, in plots, direct from the freeholder, for Villas.—This estate is within 100 yards of a station, at which more than fifty trains stop daily, and abutting on the high road. Its most important feature is, that on the completion of the Ealing Extension of the Metropolitan Railway, this site will be actually within half an hour of the Bank of England. The subsoil is gravel, and the roads and sewers are made.—Particulars of Messrs. GRAY & BERRY, 105, Edgware-road; or Mr. JONES, Architect, Ealing, W.

ON the High Road between Staines and Egham.—TO BE LET, with immediate possession, a first-class BRICKFIELD, which for the last five years has been most successfully worked by Mrs. Burchett & Son. The field contains a great quantity of land situated on it of first quality. Bricks are in great request in the neighborhood, and it offers a first rate opportunity to a man of business. The field abuts to the Staines and Wokingham Railway, to which there is no doubt a siding could be obtained. For further particulars, apply to Messrs. S. HEDGE & CO. Timber Merchants, Staines.

TO CARPENTERS, BUILDERS, and OTHERS.—TO BE LET, on very reasonable terms, a convenient JOINER'S and BUILDER'S PREMISES, in the city of Norwich, having a good and old-established business carried on thereon. Average returns, 800l. per annum.—Apply to Mr. G. H. MURRELL, Valuer and Agent, 5, Bank-street, Norwich.

MALVERN. — Near the Proprietary College.—Valuable BUILDING LAND, Freehold, Tithe Free, and Land-tax Redeemed.—TO BE SOLD by Private Contract, either in one lot, or not less than half an acre each, upwards of FIVE ACRES of FREEHOLD BUILDING LAND, bounded by the New College Road and the road leading to Southfields, within a few minutes' walk of the railway station. The land was part of Mason's estate, and from its contiguity to the Proprietary College is well adapted for the immediate erection of master's houses, or for first-class residences, so much wanted for the accommodation of the pupil boarders.—For further particulars apply to Mr C. PURCOCK, Solicitor; Messrs. WEBB & BUCK, Surveyors; Mr. BENTLEY, Auctioneer, all of Worcester; or to Mr. CH. HANSOM, Architect to the Proprietary College, Malvern.

TO BUILDERS.—LAND TO BE LET, at a moderate ground rent, at Tollington Park, for the erection of Houses. Advances made. Plans can be seen, and the terms ascertained, upon application to Mr. ADAMS, 5, Arthur street West, London Bridge.

TO CARPENTERS, WHEELWRIGHTS, and SMITHS.—TO BE LET, on very desirable terms, a very essential CARPENTER, WHEELWRIGHT, and SMITH'S BUSINESS, with good Dwelling-house, Workshops, Sheds, and Timber yard, situate in the county of Oxford. This very old-established Business has been carried on successfully for many years. The Plant and Stock to be taken at a valuation, and may be taken to immediately. Information can be had by applying, by letter, to P. C. Post office, Watlington, Oxon.

FREEHOLD LAND TO BE SOLD, or LET on BUILDING LEASES About Two Acres at Forest-hill, near the Station; One Acre at Norwood Junction Station; Two Acres at Glengall-grove, Old Kent-road. Also a Wharf to Let, at Kent-road Bridge.—Apply to Mr. MAY, Acorn Timber-wharf, Old Kent-road.

FOR PRICES, SEE LAST WEEK'S ADVERTISEMENT.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,

WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

TRAP, 2s.

HALF-SOCKET PIPES same prices as the Whole Sockets, by the use of which Drains may be readily examined, and Junctions inserted, in the event of requiring further connections.

Manufacturers also of

LOVEGROVE'S PATENT DOUBLE AND TRIPLE JUNCTIONS AND INSPECTION SHAFTS for small Sewers and Drains, by the use of which the Sewers and Drains may be examined and cleansed without disturbing the surface of the ground; adapted for ventilation of Sewers and Drains.

DRAWINGS, WITH PRICES, WILL BE FORWARDED FREE, ON APPLICATION.

THE FLUO-SILICIC STONE-PRESERVING COMPANY, LIMITED.

39, CHARING CROSS, S.W. & 12, COPTHALL COURT, THROGMORTON STREET, E.C.

PATENT FLUO-SILICIC INDURATIONS for the PRESERVATION of STONE, CEMENT, and other like materials. The Company apply to the surface of Stone, Cement, &c. a solution of Fluo-Silicic Acid, and Silicate of Potash. These are the only patents which embrace the use of that most valuable agent, Fluo-Silicic Acid. Bath, Caen, and other soft stones, when treated by the Company's solution, become extremely hard. The great expense of high ornament to build ings in hard stone has been an obstruction to Art; but since the Fluo-Silicic process can be applied as readily to soft stone after it is carved, that obstruction exists no longer. The Fluo-Silicic at once permanently arrests the decay of all stone.—For further information apply to the Manager of the Company, Mr. DUDLEY, Architect, as above.

BARTLETT, BROTHERS, & CO.

DEVONSHIRE WHARF, CAMDEN TOWN, N.W.

PATENT INDURATING SOLUTIONS,

For the Preservation of Stone, Cement, &c.;

PATENT SILICEOUS PAINT, FOR COATING BRICKS, CEMENT, &c.

FIRE-PROOF VARNISH,

For Internal Wood Work, Roofs, and Church Work generally. This Varnish renders Wood Uninflammable, and Preserves it from Decay.

1851. 1862.

TERRA-COTTA WORKS,

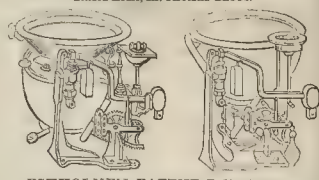
BLACKFRIARS ROAD,

LONDON, S.

MARK H. BLANCHARD & CO.

Successors to COADES.

Original Works established 1769. Terra-Cotta Manufacturers to her Majesty, the Commissioners of 1851, the Board of Works, the Trinity House, the Admiralty, the Royal Horticultural Society, and the Department of Science and Art, South Kensington, and the Recipient of the



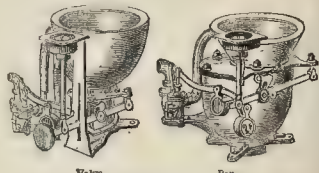
Prize Medal at the 1851 Exhibition for MATERIAL and WORKMANSHIP in TERRA-COTTA, and the only Recipient of Two Prize Medals at the 1862 Exhibition for TERRA-COTTA and POTTERY, have the honour to inform the Nobility, Gentry, Architects, and others, that they can be SUPPLIED from the above Works with every article in this imperishable and invaluable Material in Sculptural and Architectural Embellishments, suitable to the Palace, Mansion, or Cottage, which will be found to be unequalled in price, quality, and durability; and the Works of this Establishment have stood the test of time.

A beautiful variety of Statues, Statuettes, Vases, Tazzæ, Fountains, Flower Pots, Balustrade Terminals, and other adornments, suitable for the Conservatory, Flower Garden, and Grounds, at prices unprecedented. Estimates furnished.

An illustrated Priced Catalogue will be forwarded upon the receipt of eight postage-stamps.

GUEST & CHRIMES, FOUNDRY and GENERAL BRASS WORKS, Rotherham; and 37, Southampton-street, Strand, London, W.C.

London House, Mr. THOMAS BEGGS.



ESKHOLME'S PATENT PNEUMATIC REGULATOR and VALVE CLOSET.

Suitable for first and second class houses, being most efficient and simple, free from all snarls, and requires no cisterns, service boxes, cranks, wires, or levers, but is complete in itself ready for attachment to any ordinary house service pipes. It is supplied in three qualities, all equally efficient, differing only as to the style of fitting up. A second class quality is also manufactured. The Regulators are usefully applied to the ordinary Pan Closet, alike dispensing with all cisterns, service boxes, levers, cranks, wires, &c. The Regulator is supplied separately, as well as connected to ordinary direct Service Main Cottage Water Closets.

Chrimes's Patent High pressure Single and Double Loose Valve and Screw Down Cocks; Improved Self-acting and Pull Water-Closet; Patent Almolite Water Waste Preventer; Plumbers' and Gasfitters' Brass Work of every description. Drawings, Descriptions, Prices, and Testimonials will be forwarded per post on application as above.

J. TYLOR & SONS' PATENT REGULATOR WATER-CLOSETS.

Valve. Pan.

The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is insured. Any number can be worked by one supply-pipe. No cistern-valves, cranks, or wires required. The Closets can be seen in action at the Manufactory, and Illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate-street, London.

INTERNATIONAL EXHIBITION, 1862.

CLASS 35, NO. 6849.

3s. 9d.

The ONLY MEDAL "for STONEWARE" has been awarded to

DOULTON & WATTS LAMBETH POTTERY, LONDON

In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET PANS, at the price of the commonest description of earthenware.

Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness, it cannot be surpassed by the most expensive closets.

FIGURE "D" STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

TERRA COTTA and Fine STONEWARE POTTERY, warranted to stand Frost.

JOHN M BLANSFIELD, STAMFORD POTTERY, STAMFORD, LINCOLNSHIRE, has greatly improved and economised the manufacture of TERRA COTTA and Fine STONEWARE for ARCHITECTURAL PURPOSES. He is also prepared to produce it of various new colours, so as to harmonize with Marble, Portland, and other Stones, and equal in hardness to Granite.

A Medal at the International Exhibition was awarded, in Class 10, Section C, Architectural Objects, for "Perfection in manufacture and beauty of form." A Medal was also awarded for "Terra Cotta."

Moulded Bricks, Surface Copings, Cills, Dressings, Quoins, Balusters, Capitals, Crosses, Terminals, Vases, Statues, Brackets, Consoles, Garden Edging, Guttering, six, nine, and twelve inch Paving Tiles, &c. &c.

Also Plain and Mosaic Pavements for Halls, Churches, Conservatories, &c. in all colours.

London Office, 377, Oxford-street, W.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION, 1862.

IMPERISHABLE TESSELATED PAVEMENTS, combining a highly decorative and economical substitute for ordinary floors of their perishable coverings. MAW & CO'S Pattern-book, designed by M. Digby Wyatt, esq. together with a special design, and estimate of cost adapted to any given dimensions of hall, passage, conservatory, verandah, friezes, &c. will be sent on application to Benthall Works, Broseley, Salop.

May be seen at the Exhibition of Building Inventions, &c. now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, free.

London Agents—W. B. SIMPSON & SONS, 456, West Strand, who have on view a great variety of Specimens of the Pavements.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for the WARES is REMOVED to No. 21 Wharf, Macclesfield-street North, City road Basin, N. Pauly, late the Inventor, "TERRO METALLIC," is the exclusive right of the Proprietor; and lastly, that the "Reports of the Jurors," page 581, of the Great Exhibition, 1851, note the great merits of a First-class Medal and rank the Manufactories known so long as "The Teleries," Tunstall, Staffordshire, as the first of the kind in the world.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION.

MAGNUS'S ENAMELLED SLATE received the Medal of the Society of Arts, the Prize Medal at the Great Exhibition, 1851, Two First-class Medals at the Paris Exhibition, and Two Prize Medals at the International Exhibition of 1862.

Trashy imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the name of "MAGNUS" is upon each article.

Chimney-pieces, Billiard-tables, Table-tops, Baths, Wall-linings, &c. a New Illustrated Catalogue of which can be had at the Pimlico Slate Works 39 and 40, Upper Belgrave-place, Pimlico, S.W.

SALES BY AUCTION.

METROPOLITAN RAILWAY.—Smithfield Loop.—Building Materials of several Factories, Dwelling-houses, and Premises, Sharp's-alley, and Red Lion-alley, Cow Cross street.

PULLEN, HORNE, & EVERSFIELD are instructed by the Directors to SELL by AUCTION, on the PREMISES, on WEDNESDAY, OCTOBER 28, at TWELVE, in lots, the valuable BUILDING MATERIALS of several Factories, Dwelling-houses, Stables, and Premises in Sharp's-alley and Red Lion alley, Cow Cross street, Smithfield, comprising capital stock bricks, oak and fir timber in roofs and floors, pantiles and plain tiles and slates, sashes, doors, weather boarding, flooring boards, folding gates, pebble, clinker, and other paving, lead gutters and pipes, cisterns, stoves, and other useful fixtures. May be viewed the day previous, and Catalogues had of Messrs. BURCHELL, Solicitors, Broad Sanctuary; and of PULLEN, HORNE, & EVERSFIELD, 30, Fore street, E.C. and 40, Parliament-street, S.W.

HIGHGATE.—BUILDING MATERIALS OF A LARGE RESIDENCE.

PULLEN, HORNE, & EVERSFIELD are directed to SELL by AUCTION, on the PREMISES, on FRIDAY, OCTOBER 30th, at TWELVE, in Lots, all the excellent BUILDING MATERIALS, Fixtures, and Fittings-up of a Large Residence, with Coach-houses, Stabling, &c. known as Rose Court House, Highgate, near the Toll-gate, comprising about 150 of sound stock bricks, 2,000 plain tiles, 30 squares of slates, stout rafters, joists, girders, and other useful timber; 50 modern sashes and casements, 10 doors, marble chimney-pieces and Interior Fittings, 75 squares of sound floor-boards, York and Portland paving, stone window cills and steps, pebble and clinker paving, stable fittings, lead gutters, cisterns and pipes, stoves, and other useful fixtures. Also a quantity of growing timber and shrubs, several thousands of turf, &c.—May be viewed the day previous. Catalogues had of PULLEN, HORNE, & EVERSFIELD, 30, Fore-street, E.C. and 40, Parliament-street, S.W.

OLD STREET ROAD. Freehold Houses and Ground Rents, including the new Tariff public house and Twelve other Houses and Shops; the whole producing a Rental of about 305l. In 13 Lots.

MR. PHILIP D. TUCKETT is instructed to SELL by AUCTION, at the MART, Bartholomew-lane, London, on TUESDAY, the 27th of OCTOBER, 1863, in eight lots, a very valuable FREEHOLD PROPERTY, including the Dwelling Houses and Shops Nos. 48, 50, 40, 41, and 42, Old Street-road, and Nos 7, 8, and 9, Boot-street, in the Parish of St. Leonard, Shoreditch, let to respectable tenants at very low rent; an amply secured RENT of 125l. per annum, arising out of that well accustomed public house known as The New Tariff, and three adjoining houses, together with the REVERSION of the above valuable property after an unexpired term of forty-nine years: and a GROUND RENT of 14l. per annum, arising out of Nos 3 and 4, Boot-street, producing a rack rental of 91l.—Particulars, with plans and conditions of sale, may be obtained at the Mart; of Messrs. POOLE & GAMLEN, Solicitors, 3, Gray's Inn square; and of Mr. PHILIP D. TUCKETT, Land Agent and Surveyor, 76, Old Broad-street, E.C.

ESSEX — HORNCHURCH BRICKFIELDS, near Romford. — To BRICK, TILE, and DRAIN-PIPE MAKERS, BUILDERS, and OTHERS.

MESSRS. COLLIS & WARREN will SELL by AUCTION, at the WHITE HART INN, Romford, on WEDNESDAY, NOVEMBER 18th, 1863, by direction of the Proprietor, the valuable LEASE, fourteen years unexpired, and GOODWILL of that old-established and well-circumstanced BRICK, TILE, and DRAIN PIPE MANUFACTORY, situate at Hornchurch, and about two miles from the market town of Romford, comprising a commodious brick built residence, with large gardens. There is an almost inexhaustible supply of good earth for making tiles, pipes, and general pottery ware, together with a large kiln, extensive drying sheds, stables, and other necessary buildings, the whole covering a space of five acres. Also the LEASE, fifteen years unexpired, and GOODWILL of a large BRICKFIELD (part under cultivation), comprising twenty two acres of land, with excellent brick earth of great depth. It has been worked for many years, and well known as the "Hornchurch Brickfields," situate near Butt's-green. These properties have been worked conjointly, and a large and very profitable trade has been successfully carried on for the last fifty years, a large number of bricks being made yearly, together with an immense quantity of tiles, drain pipes, chimney pots, &c. On account of the great and continually increasing demand for bricks, &c. in the neighbourhood, and being the only brick field within a radius of seven miles, these properties possess peculiar advantages, and purchasers may rely upon realising the already extensive trades and receiving a large interest for the capital invested.—Particulars and Conditions of Sale may be had of Messrs. BERRIDGE & FRANCIS, Solicitors, South-street, Romford; at the Place of Sale; and of COLLIS & WARREN, Surveyors and Valuers, Romford

VALENCIA SLATE SLAB QUARRIES, COUNTY KERRY, IRELAND.

MESSRS. FULLER & HORSEY are instructed to SELL by AUCTION, at the AUCTION MART, London on WEDNESDAY, OCTOBER 28, at TWELVE, in one lot, unless an acceptable offer be previously made by private contract, the extensive QUARRIES and MILLS of the VALENCIA SLATE SLAB COMPANY, situate in the Island of Valencia, County Kerry, Ireland. The works have been carried on by the present company for about fourteen years, and a very large outlay has been made in opening the quarries, and in erecting the mills and the requisite machinery. The quarries are situate on the side of a mountain, about 480 feet above the sea level, and an opening has been made for working about 120 feet wide, running into the mountain to about the same depth, uncovering a succession of platforms of slates of various widths. The slate rock lies most conveniently for working, at an angle of about 35 degrees, and has a regular cleavage. The slabs are severed by wedges instead of by blasting, thus avoiding the large amount of waste occasioned by the latter process. The roof of the quarry is self-sustained, and is perfectly secure. The quality of the slate is now well known and appreciated, and are taken in large quantities by the first London houses in preference to slate from elsewhere. They take a beautiful and permanent polish, are particularly valuable for enamelling, are unaffected ingeniously by furnace heat, and are raised in larger slabs than from any other quarry. The waste from the slab blocks is made into roofing slates, for which there is ample local demand. The present yield is about 2,000 tons of slate slabs annually, but by a comparatively small outlay in an extension of the workings the quantity may be doubled, the machinery at the mills being equal to prepare that quantity, and the demand at the present time being in excess of the possibilities of supply. The mills are situate about 24 miles from the quarries, are connected by a good road of easy descent, which is kept in repair principally at the expense of the company, and it is believed that every facility would be afforded by the Knight of Kerry, who is the freeholder, for laying down a tramway by the side of the present road, which would much lessen the cost of transit. The mills are most advantageously placed, being immediately contiguous to the pier, at which vessels of 300 tons burden can lie alongside, and there are no pier dues nor wharfage payable. The harbour of Valencia is both safe and commodious, and regular to London are about the same as from the North Wales ports. The buildings are well arranged, and substantially erected. They are fitted with sawing and planing machinery of the best description, fitted by Blyth, of Limehouse; and there are overhead cranes, tramrails, and every appliance for saving manual labour. There is a plentiful supply of water for the purposes of the mills, from a large open reservoir. The quarries and works are held on easy terms under an agreement for lease from the Knight of Kerry, for a term of fifty-seven years from 1st January, 1864, determinable at the lessee's option on giving six months' notice. The lease, a draft of which may be seen prior to the sale at the Office of the Vendor's Solicitors, will be granted by the Knight of Kerry direct to the purchaser. The present Company have expended upwards of 10,000l. upon the property. They have succeeded in establishing the reputation of, and a market for, the slate, which thoroughly proved the existence and uniform character of the slate, and the extent to which the workings may be carried; and they have supplied and fitted the most approved modern machinery for the preparation of the slate for market, and it is confidently believed that the Works are now in that state that, with the personal attention of the owner, very profitable results may be anticipated.—The Works may be viewed by Cards only, which, with further particulars, may be had of Messrs. PALMER, NETTLESHIP, & ELAND, Solicitors, 4, Trafalgar-square, W.C.; at the *Mining and Counties Herald* Office, Birmingham; at the Graham Hotel, Sackville-street, Dublin; at the Railway Hotel, Killarney; at the Adelphi Hotel, Liverpool; at the Mart, London; and of Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

FOR SALE, at GARRAWAY'S COFFEE HOUSE, WEDNESDAY, 28th OCTOBER:—
500 Loads Timber, foreign and colonial,
50,000 Pieces Deals and Battens, do. do.
And other Wood Goods.
HENRY FREEMAN & CO. Brokers, 3, Crooked-lane, E.C.

HOLLOWAY.—Important Sale of Plumber's, Decorator's, and Gas-fitter's Stock.

MR. THOMAS KING is instructed by Messrs Cox & Cutler, who are dissolving Partnership, to SELL by AUCTION, on the PREMISES, No. 4, Lorraine-terrace, Holloway-road, on TUESDAY, NOVEMBER 3rd, 1863, and following day, without the least reserve, the valuable and quite modern STOCK in TRADE, comprising plumbers' brasswork of every description, sheet lead, lead pipes, &c.; 2,000 pieces of paperhangings, 4,000 feet of plain, and a quantity of ornamental glass, varnishes, diamonds, brushes and tools, gas-fittings, including 180 chandeliers; brackets and pendants, iron barrel, lacquered and other tubing, 40 fittings; builder's plant and stores, including ladders, scaffold boards, workmen's bench, range, register and other stoves and a large number of useful articles.—On view MONDAY preceding the Sale. Catalogues may be had on the Premises, and of Mr. THOMAS KING, Auctioneer and Surveyor, No. 1, Railway-place, Holloway-road, N.

TO ARCHITECTS, BUILDERS, AND OTHERS.

MR. DELL is instructed by Mr. George Feest to SELL by AUCTION, upon the PREMISES, the Cliftonville Marble and Stone Works, 57, George-street, Hove, Brighton, on MONDAY, OCTOBER 26th, 1863, at TWO o'clock (to preserve the trains), one hundred of the most beautiful and highly-finished MARBLE CHIMNEYPIECES, of various designs and various shapes, in Statuary, Sicily, Italian, Black and Gold, and other Marbles. Burke's idea of the beautiful is in the above works remarkably illustrated, for they possess his four characteristics of Beauty, viz. First, to be perfectly small; secondly, to be smooth; thirdly, to have a variety of parts; but, fourthly, to have those parts not angular, but melted, as it were, into each other. A writer in "The Builder" says: "It is instinctively a delightful chat makes us worship beauty." May be seen at Mr. G. FEIST'S Premises, the Cliftonville Marble and Stone Works, 57, George-street, Hove, of whom catalogues may be had; and of Mr. DELL, Auctioneer and Valuer, No. 45, Middle-street, Brighton.

BARKING-ROAD, near the THAMES IRON WORKS.—Thirty Plots of highly Valuable FREEHOLD BUILDING GROUND, with frontages on the new thoroughfares leading directly from the high road to within 150 yards of the said works.

MR. JOHN WALLEN has received Instructions to SELL by AUCTION, at the VICTORIA TAVERN, opposite the Barking-road Railway Station, on TUESDAY, NOVEMBER 3rd, at ONE o'clock, in thirty lots, the first portion of an ESTATE of nine acres, most eligibly situate in the immediate vicinity of the Thames Iron Works, and the second portion of the five acres adjoining the Barking-road, with a new direct thoroughfare uniting the two with Hallsville, and the above great establishment, with the main road from the metropolis. The demand for houses in this district is now so great that none are to be had, and applications are made for those erecting before completion. The sewers and roads (41 feet wide) are being completed, and will be maintained by the Local Board of Health. The land now to be offered is suitable for Shops, or for the higher classes of skilled artisans, of whom so many employed here are obliged to reside at a distance.—Particulars, with plans (ten days before the Sale), of PETER GELLATLY, Esq. Solicitor, 81, Mincing-lane, Cornhill; of JOHN DINGWALL, Esq. Solicitor, 8, Tokenhouse-yard; the Place of Sale; the Hallsville Tavern, Hallsville, the Pavilion Hotel, North Woolwich; Globe, Blackwall; and of Mr. JOHN WALLEN, 68, Old Broad street, E.C. and Romford.

BROMFLEET, containing valuable beds of Red and White Clay for Bricks.—TO BE SOLD by AUCTION, by

MR. ROBERT BROWN, at BOWMAN'S HOTEL, Howden, on FRIDAY, the 13th day of NOVEMBER, 1863, at THREE o'clock in the Afternoon, subject to such conditions as shall be then produced, all the valuable MANOR of BROMFLEET, containing about 1,200 acres; also all that well-built FARM-HOUSE, with convenient and suitable outbuildings, now in the occupation of Mr. Thomas Bell, and 27 acres 3 roods 8 perches more or less, which will be offered in lots. Part of the Estate adjoins the river Humber and the Market Weighton Canal. The Hull and Selby Railway runs through Broomfleet, and a market town and port. The stabling capacity is within three miles. Bromfleet adjoins Wallingfen, and there are valuable beds of clay in some of the lots, which adjoin the Market Weighton Canal and are between Wallingfen and the outlet into the Humber. Borings have been made in these lots. On boring in one lot to the depth of 26 feet 6 inches, the clay was found to be 27 feet 6 inches thickness, and of a superior quality for red bricks; and 3 feet 6 inches in thickness, and of a superior quality, for white bricks. On boring in another lot to the depth of 28 feet 6 inches clay was found to be 24 feet in thickness, and of a superior quality for red bricks.—Mr. MARMADUKE SCUTT, one of the tenants, will show the Estate; and further particulars may be had on application to SAMUEL VESEY, Esq. Manor House, Halton, near Spilsby; Mr. ROBERT BROWN, of Howden, the Auctioneer; or at the Offices of Messrs. ENGLAND, SAXELBYE, & ROBERTS, Solicitors, Quay-street Chambers, Hull.

JERMYN STREET, ST. JAMES'S.—The capital Leasehold Premises, Show-rooms, Workshops, and private Residence, with the Goodwill of the old-established Business of the late Mr. Pierce, furnishing ironmonger and manufacturer of improved stoves, ranges, and patent machinery for laundries

MESSRS. RUSHWORTH, JARVIS, & ABBOTT are instructed by the Executors to announce for SALE by AUCTION, early in NOVEMBER (unless an acceptable offer be previously made by private treaty) the LEASE, for twenty-one years, at a rent of only 140l. per annum, of those spacious PREMISES, situate No. 5, Jermyn street, between Regent-street and the Haymarket, and near the Circus, Piccadilly, together with the valuable GOODWILL of the Business which has existed for nearly half a century, including among the numerous customers many noblemen and families of rank and influence, architects, and others, whose long-continued patronage attests the superiority of the work for which Mr. Pierce has been so justly celebrated. The shop and show rooms are light, lofty, and spacious, and are fully stocked with excellent modern stoves, fancy-coal-fitting, marble chimney-pieces, ranges, washing and drying machines for laundries, baths, numerous lamps, chandeliers, candelabras, and ornamental items in bronze and ormolu, necessary for carrying on the most well-established trade, all or any part of which may be secured upon moderate terms. The purchaser of the lease and goodwill will only be required to take the plant, fixtures, and stock in trade at a fair valuation. Immediate possession will be given, and every facility afforded for securing the customers. Further particulars, with cards to view the premises, may be obtained of Messrs. RUSHWORTH, JARVIS, & ABBOTT, Saville-row, W. and 19, Grange-alley, Cornhill, E.C.

OXFORD — VALUABLE BUILDING MATERIALS, comprised in the several Houses in Beaumont street and Magdalen-street, the intended Site for the erection of the Randolph Hotel.

MR. JOHN FISHER begs to announce that he is instructed by the Randolph Hotel Company to SELL by AUCTION, in the month of OCTOBER next, the above BUILDING MATERIALS; consisting of roofs, floors, doors, shop-fronts, sashes and frames, partitions, staircases, fittings, &c. which will be found peculiarly valuable in the circumstance that the houses have been built within a few years.—Further particulars will be advertised previous to the sale.

NEW BARNET, HERTS.—Valuable Freehold Building Land.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the MART, London, on MONDAY, OCTOBER 26th, at TWELVE for ONE, fifty-nine lots of FREEHOLD BUILDING LAND, land-tax redeemed, situate in the Lancaster road, within a few minutes' walk of Barnet station, on the Great Northern Railway. The Metropolitan Railway brings the property within half an hour's ride of the City, and makes it very desirable for persons wishing to reside a short distance from town. Nine tenths of the purchase-money may remain on mortgage or contract, at 5 per cent. to be paid in nine years, by half-yearly instalments; but the whole or any part of the balance may be paid off at any time, without notice.—Particulars, plans, and conditions of sale may be obtained, about ten days before the sale, at the Railway Hotel, and Railway Tavern, New Barnet; of Messrs. RUSSELL & DAVIES, 59, Coleman-street, E.C.; of the Auctioneer, 14, Moorgate-street, London, E.C.; and at the Place of Sale.

ACTON, MIDDLESEX.—Eligible Freehold Building Land, close to the Railway Station.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the MART, opposite the Bank of England, on MONDAY, OCTOBER 26, at TWELVE for ONE, Thirty Lots of eligible FREEHOLD BUILDING LAND, with frontages to Grove-road, near the village of Acton, and close to the Acton Station on the London and North-Western Junction Railway. The corner lot, with frontages to Grove-road and the high-road, is a most eligible site for the erection of a tavern, and the only lot on the estate set apart for that purpose. Nine tenths of the purchase money may remain on mortgage or contract at five per cent. to be paid in nine years by equal half yearly instalments, but the whole or any part of the balance may be paid off at any time without notice.—Particulars, plans, and conditions of sale may be obtained at the Mart; of Messrs. RUSSELL & DAVIES, 59, Coleman-street, E.C.; of the Auctioneer, 14, Moorgate-street, London, E.C.; and at the Place of Sale.

ACTON, Middlesex.—Eligible Freehold Building Land, five miles from the City.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the MART, opposite the Bank of England, on MONDAY, OCTOBER 26, 1863, at TWELVE for ONE o'clock, 32 Lots of eligible FREEHOLD BUILDING LAND, with frontages to Cabernet-road, Bollo lane, near the village of Acton. Nine-tenths of the purchase money may remain on mortgage or contract at five per cent. to be paid in nine years by equal half yearly instalments, but the whole or any part of the balance may be paid off at any time without notice.—Particulars, plans, and conditions of sale may be obtained at the lunns in the neighbourhood; of Messrs. RUSSELL & DAVIES, 59, Coleman-street, E.C.; of the Auctioneer, 14, Moorgate-street, London, E.C.; and at the Place of Sale.

CLIVE VALE FARM, HASTINGS.—Eligible Freehold Building Land.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the HAVELOCK HOTEL, Hastings, on TUESDAY, NOVEMBER 10th, at FIVE for SIX o'clock in the evening, in fifty lots, the first portion of this most desirable PROPERTY, free of tithe, and land tax redeemed, situate near to Ore Church, with frontages to road leading from Hastings to Fairlight, and on the new roads called Alfred-road and Canterbury-road. The roads are being formed, and drainage will be provided by the vendors, so as to enable purchasers to commence building operations immediately. The situation is one of the most beautiful in the neighbourhood, within a mile of the town of Hastings, and commanding extensive views of the sea and surrounding country. The corner lot, with frontages to the road from Hastings to Fairlight and the Alfred-road, is most eligible for the erection of a tavern, and is the only lot on this portion of the estate set apart for that purpose. Nine-tenths of the purchase-money may remain on mortgage or contract at 5 per cent to be paid in nine years by half-yearly instalments, but the whole or any part of the balance may be paid off at any time without notice.—Particulars, plans, and conditions of sale may be obtained ten days before the sale at the principal Hotels at Hastings; of Mr. E. J. BANE, Prospect-place, St. Michael's, Hastings; of Messrs. RUSSELL & DAVIES, 59, Coleman-street; and of the Auctioneer, 14, Moorgate-street, London, E.C.; of the Foreman on the Estate; and at the Place of Sale.

ON MONDAY, NOVEMBER 2nd, at TWELVE for ONE. CAMDEN TOWN, N.W.

MESSRS. LEREW & LEREW will SELL by AUCTION, at the YARD, Camden-terrace, a quantity of useful STOCK; viz. planks, deals and battens, dry cut stuff, prepared flooring, quartering, slating, battens, pantile laths, mahogany, wide pine boards, doors, the square, scaffolding, ladders, old materials, &c.—Auction Offices, Carding-ton-street, Hampstead-road.

SALE by TENDER.—In consequence of the Directors of the Port of Portsmouth Floating Bridge Company having entered into a contract for the construction of a larger and more powerful IRON FLOATING BRIDGE, with her Engines and Machinery, as she now lies at her moorings at Gosport, will be SOLD by TENDER. Tenders to be made in writing, addressed to the Clerk of the Company, from whom further particulars may be had on application), at his Office, 28, Clarence-square, Gosport, and endorsed, "Tender for Purchase of Bridge," on or before the 11th NOVEMBER, 1863. The Directors do not bind themselves to accept the highest or any Tender.—By order of the Directors,

WILLIAM F. BURRELL, Clerk to the Company.

Portsmouth, 15th October, 1863.

MONEY.—IMMEDIATE CASH ADVANCES MADE ON FREEHOLD, LEASEHOLD, and COPYHOLD PROPERTY TIMBER, WINE, and SPIRIT WARRANTS. BANKRUPTS' and INSOLVENTS' CASES CONDUCTED. Balance-sheets Prepared, and Meetings of Creditors Convened. Mr. RICHARD CROSSLEY, ACCOUNTANT and BUSINESS AGENT, 17, Moorgate-street, Bank, London.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the MUTUAL LOAN FUND ASSOCIATION (Incorporated by Act of Parliament, 1850), 14, RUSSELL STREET, Covent Garden, W.C. Advances from 100l. to 20,000l. upon Freehold and Leasehold Property for any term up to ten years. Mortgages redeemed, and the advance can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the repayment of the advance taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, or competition for an advance, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.

EDWARD HARPER, Secretary.

TO BE DISPOSED OF, an old-established HORTICULTURAL BUILDER'S BUSINESS and extensive PREMISES, in the best part of King's-road, Chelsea. The Proprietor retiring from business.—Apply to E. DENCH, 132, King's-road, Chelsea.

TO BE DISPOSED OF, the first-class BUSINESS, at the West End of London, of an old-established MANUFACTURER of a celebrated PATENT ARTICLE, together with which Business is carried on that of Engineers, Founders, Safe Manufacturers, &c. Any firm of Mechanical Engineers, or Founders, Smiths, or first-class Ironmongers, would find this an excellent opportunity for making an addition to their business. The concern to be disposed of by the family of the late sole Partner, and is one the reputation of which has been long established throughout England and many parts of the Continent.—Apply by letter, to E. W. CHILDS, Esq. Solicitor, 25, Coleman-street, London, E.C.

TO BUILDERS, CONTRACTORS, and OTHERS.—TO BE DISPOSED OF, in a good and rising town ten miles north of London, an old-established BUSINESS, and close to a railway station; the Stock and Plant to be taken in the usual way with the Business; the place may be rented or purchased if required.—For full particulars, apply to Mr. THOS. BROWN, 223, Shoreditch.

WOOD PAVING. MESSRS. THORN & CO.

CONTRACT to MANUFACTURE and LAY WOOD PAVING, of a very decorative and durable character, is particularly adapted for RAILWAY STATIONS, ENGINES, SHOPS, IRON BRIDGES, &c.

THORN & CO. STEAM SAW-MILLS, CREMORNE WHARF, CHELSEA, and 6, ROSS VENOR ROAD, PIMLICO.

As Sole Contractors for Railway Arches and Iron Bridges.

London:—Printed by CHARLES WYMAN, Printer, at the Printing-office of Cox & Wyman, Nos. 74 and 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," No. 1, York-street, in the Parish of St. Paul, Covent-garden, both in the County of Middlesex.—Saturday, October 24, 1863.

Tickets may be obtained by Working Men only, on MONDAY, the 2nd NOVEMBER, from TEN to FOUR o'clock, upon payment of a fee of 6d. for the whole course. Each applicant is requested to bring his name, address, and occupation written on a piece of paper, for which the ticket will be exchanged. TRENHAM REEKS, Registrar

GEOLOGISTS' ASSOCIATION has REMOVED from 5, Cavendish-square, to the ROOMS of the MEDICAL SOCIETY of LONDON, 32A, George street, Hanover-square. The FIRST MEETING this Session will be held on TUESDAY evening, NOVEMBER 3rd, at SEVEN o'clock, when Mr. CARTER BLAKE, F.G.S. will read a paper on FOSSIL ELEPHANTS, and Mr. EVANS will exhibit a COLLECTION of FOSSILS from the Railway Cuttings near London. Ladies or gentlemen wishing to join the Association can obtain every information from Professor TENNANT, President, 149, Strand; or J. CUMMING, F.G.S. Hon. Secretary, 7, Montague-place, Russell-square. Admission fee, 10s.; annual subscription, 10s.

NOTICE.

BROWN & GREEN'S KITCHEN RANGE WAREHOUSE will shortly be REMOVED to the NEW PREMISES, 72—74, Bishopsgate street Within, a few doors from the present establishment. These will afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Register Grates, and Cooking Utensils, to meet the great public demand; and Mr. BROWN, the consequent more extensive operation, by the manufacturers themselves, of all descriptions of hot water, bath, laundry, and steam work.

91, Bishopsgate street Within, July, 1863.

TO QUARRYMEN.—WANTED, some QUANTITY of WASTE KENTISH RAG or OTHER STONE, suitable for a breakwater and slope for sea defence.—Price, delivered on the Essex coast, near Harwich, to A. E. S, Jewin-crescent, London, E.C.

SOUTH KENSINGTON MUSEUM.—The NEW NATIONAL ART TRAINING SCHOOLS, for Male and Female Classes, will be OPENED for the inspection of the Public, every SATURDAY, from TWO till NINE, p.m. Entrance through the Museum.—By Order of the Lords of Committee of Council on Education.

TO INVENTORS.—All intending Patentees should procure the PRINTED INFORMATION regarding PATENTS their cost, and mode of procedure to be adopted—issued gratis by the General Patent Company (Limited), 71, Fleet street, London. ROBERT M. LATHAM, Secretary.

SHAKESPEARE TERCENTENARY CELEBRATION at STRATFORD-UPON-AVON.—Persons desirous of TENDERING for the ERECTION of a TEMPORARY BUILDING, at Stratford upon Avon, capable of holding 5,000 persons, may inspect the plans and specifications at the Offices of Messrs. THOMPSON & COLBOURNE, Architects and Surveyors, Ely place, Stratford upon Avon, on and after MONDAY next, the 26th instant.—Sealed Tenders, endorsed "Tender for the Pavilion," to be forwarded to the Chairman of the Shakespeare Tercentenary Celebration Committee, at the Town Hall, Stratford-upon-Avon, on or before TWELVE o'clock at noon on MONDAY, the 9th day of NOVEMBER next. The Committee do not bind themselves to accept the lowest or any Tender.—By order,

ROBT. E. HUNTER, Secretary.

Office, Town Hall, Stratford-upon-Avon.

CONTRACTS.

WAR DEPARTMENT CONTRACT.
NOTICE to BUILDERS.

TENDERS are required for WORKS to be EXECUTED in TAKING DOWN and RE-BUILDING about 250 feet in length of the GUNWHARF WALL, Portsmouth.

Parties desiring to Tender for these works must leave their names at the Office on or before the 3rd day of NOVEMBER, 1863, and pay the sum of ten shillings and sixpence for the Bills of Quantities, which will be forwarded to each party as soon as prepared by the Government Surveyor.

The Secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, Portsmouth, 19th October, 1863.

WAR DEPARTMENT CONTRACT.
NOTICE TO BUILDERS.

TENDERS are required for IMPROVING the DRAINAGE of the POWDER MAGAZINE ESTABLISHMENT at Marchwood, in the County of Hants

Parties desiring to Tender for the execution of these works must leave their names at the Royal Engineer Office, Gosport, on or before the 5th NOVEMBER, 1863, and pay the sum of 10s 6d for the bills of quantities, which will be forwarded to each party as soon as prepared.

The Secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, Portsmouth, 27th October, 1863.

WAR DEPARTMENT CONTRACT.
NOTICE to BUILDERS.

TENDERS are required for the CONSTRUCTION of a SEA WALL, PLATFORM, and BUILDINGS, for a double line of Magazine Railway, at Priddy's Hard, in the County of Hants.

Parties desiring to Tender for the execution of these Works must leave their names at the Royal Engineer Office, Gosport, on or before the 5th NOVEMBER, 1863, and pay the sum of 10s 6d. for the bills of quantities, which will be forwarded to each party as soon as prepared.

The Secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, Portsmouth, 27th October, 1863.

TO BUILDERS.—TENDERS are required for the whole or any part of the several Works in ERECTING and COMPLETING SIXTY COTTAGES and HOUSES at Hurst, near Ashton-under-Line, for John Whittaker, Esq.—Application for bills of quantities to be made to us, per post, on or before SATURDAY, the 31st inst. after which date all particulars as to Plans and place for inspecting the drawings, &c. will be forwarded.

PAULL & AYLIFFE, Architects, India-buildings,
Dated 21st October, 1863. Cross-street, Manchester.

TO BUILDERS.—Persons desirous of TENDERING for the ENLARGEMENT of ST. PAUL'S CHURCH, Cambridge, may see the drawings and specifications at the Office of the Architect, Mr. R. REYNOLDS ROWE, 10, Emmanuel-street, Cambridge. Sealed Tenders to be delivered to the Rev HENRY HALL, St. Paul's Parsonage, not later than SATURDAY, the 7th day of NOVEMBER, 1863. The Committee do not bind themselves to accept the lowest Tender.

BUILDERS desirous of TENDERING for the ERECTION of a DETACHED VILLA, at Eltham, Kent, can see the plans and specifications at the Office of Mr. THOMAS CHESTER HAWORTH, Surveyor, Eltham, to whom Tenders must be sent, on or before FRIDAY, the 6th day of NOVEMBER, 1863, by FOUR o'clock. The lowest or any Tender not necessarily accepted

TO BUILDERS, CONTRACTORS, PROMOTERS of PUBLIC COMPANIES, and OTHERS.—Messrs. G. A. HAIG & CO. having purchased the Freehold of Argyll House, the residence of the late Earl of Aberdeen, for the purpose of Building Wine Cellars, are prepared to receive TENDERS for the BUILDING LEASES, for nearly the whole upper portion of the Ground, comprising about half an acre, in the immediate neighbourhood of Regent Circus, with frontage to Argyll street, Regent-street, and access at the back to Marlborough Mews and Queen street, Oxford street.—Plans may be seen and full particulars obtained at the Offices of G A. HAIG & CO. Wine Merchants, 134, Fenchurch-street, City; or 83, St. James's-street, S.W.; or from Messrs. HARMOOD & PATTISON, Solicitors, No 10, Clement's-lane, E.C.

TORQUAY HOTEL COMPANY (Limited). To BUILDERS.—The Directors of the Torquay Hotel Company (Limited) are willing to receive TENDERS for an HOTEL to be ERECTED in the Cove, Torquay, from the designs of the Architect, E. N. CLIFTON, 17, St. Helen's-place, Bishopsgate-street, London. Copies of the quantities may be obtained of Messrs WILLIAMS & SCHOFIELD, 12, Montague-street, Russell-square, London, W.C. upon depositing with them the sum of five guineas, which will be returned after the delivery of the Tenders. The Directors do not bind themselves to accept the lowest Tender. The Directors will require the Builder whose Tender is accepted to give the names of two sureties, to be bound jointly with himself in the sum of 3,000l. for the due execution of the works.—By order of the Board,

E. N. CLIFTON, Architect of the Company.

17, St. Helen's-place, Bishopsgate-street, London,
7th October, 1863.

CONTRACTS.

TO BRICK MAKERS, DUST CONTRACTORS, SCAVENGERS, and OTHERS.—Notice is hereby given, that the Board of Works for the Fulham District are prepared to receive TENDERS, and to CONTRACT for the SALE and REMOVAL of the COAL DUST, ASHES, and CINDERS from the houses of the Inhabitants of Fulham, for a period of Twelve Months from the date of Contract. The work to be done according to the specification, which, with the form of Tender, may be had at the Office. No other form of Tender will be received. Tenders to be sent in sealed, and marked "Tender for Dust and Ashes" on the outside, on or before TEN o'clock on WEDNESDAY morning, the 4th day of NOVEMBER, 1863, addressed to "The Chairman of the Board of Works for the Fulham District, Broadway House, Hammersmith." The Contractor will have to enter into a written contract and bond, and to provide two good and sufficient sureties for the due performance of a Contract, and will have to pay on signing the Contract one fourth part of the money offered by him, and the three succeeding payments in advance of each quarter. The Board do not bind themselves to accept of any Tender.—By order,

W. LOVELY, Clerk

TO BUILDERS.—TENDERS (whole or separate) are required for a New CONGREGATIONAL CHAPEL to be erected in Essex street, Bow Bay. Applications for bills of quantities to be made, per post, to us, not later than TUESDAY, the 3rd NOVEMBER, after which date all particulars for inspection of drawings, &c. will be forwarded.

PAULL & AYLIFFE, Architects.
India-buildings, 24, Cross-street, Manchester.
Dated 21st October 28, 1863.

TO SEWERS CONTRACTORS and OTHERS.—The Sewers Committee of the Parish of Saint Mary, Newington, Surrey, will meet at the Vestry room of the Parish Church, on FRIDAY, the 6th of NOVEMBER next, at SEVEN o'clock in the evening, to receive TENDERS for the EXECUTION of JOINING and MEASURED WORKS in connexion with the Drains and Sewers in the parish. Printed schedules and forms of Tender can be obtained at the Office of Mr HENRY JARVIS, the Surveyor of Sewers, 20, Trinity-square, Newington, on payment of 10s. which money will be returned to the parties tendering when the Tenders are opened. No other Tenders will be received. Sureties will be required for the due performance of the contract, and the Committee do not bind themselves to accept the lowest or any other Tender.

H. & F. CHESTER, Joint Clerks to the Vestry,
October, 1863. 1, Church-row, Newington Butts.

WEST HAM LOCAL BOARD of HEALTH.—TO BUILDERS.—Notice is hereby given, that the Board of Health for the District of West Ham, in the County of Essex, are prepared to receive TENDERS for the ERECTION of TWO COTTAGES, on their Land at Canning-town, adjoining the Sewerage Outfall Works.—Conditions of Contract, forms of Tender, and any other information, may be obtained at the Office of the Local Surveyor, at Rokeby House, in Stratford. Tenders are to be delivered at my Office, at Rokeby House, not later than MONDAY, the 9th NOVEMBER, and each of them must contain a ten-pound Bank of England note, endorsed by the party Tendering, to be returned in the event either of the Tenders not being accepted, or on the completion of the contract or bond.—By order of the Board,

CHARLES WILSON, Clerk.
Rokeby House, Stratford, E. October 21, 1863.

TO BUILDERS

PERSONS desirous of TENDERING for TWO small SEMI-DETACHED HOUSES at Erith, Kent, S.E. close to the Railway Station, will please send their cards to Mr. H. FORD, 1, Charlotte-row, Mansion House, E.C. Copy of drawing and specification supplied, but no quantities

TO BUILDERS.—TENDERS are required for the ERECTION of large ENGINE HOUSE, at Middleborough, for Messrs. Gilkes, Wilson, Pearse, & Co. according to plans, specifications, and bills of quantities, which can be seen at my Offices, Darlington, from MONDAY, NOVEMBER 2nd, until MONDAY, NOVEMBER 9th. The various Tenders to be delivered to me before TEN o'clock a.m. on TUESDAY, NOVEMBER 10th.

JOHN ROSS, Architect.

TO BUILDERS and CONTRACTORS.—The Birkenhead Improvement Commissioners are prepared to receive TENDERS for the ERECTION of PAY-GATE BUILDINGS and COVERED APPROACHES, including the Passenger Bridge, Woodside Landing stage. Plans, Working and Specification, with conditions, can be seen at the Foreman's Office, on application to the Manager, Tenders marked "Tender for Buildings," and addressed to the Chairman of the Ferry Committee, Woodside, Birkenhead, are to be sent in on or before THURSDAY, the 12th NOVEMBER next. The Commissioners do not bind themselves to the acceptance of the lowest or any of the Tenders.

AMBROSE WALN, Clerk of the Commissioners.

Birkenhead, 24th October, 1863

TO BUILDERS, CONTRACTORS, and OTHERS.—The Trustees of the St. Pancras, Marylebone, and Paddington Freehold Land Society are desirous of receiving TENDERS for CONSTRUCTING PIPE DRAINS, with other works in connexion therewith, &c. Existing and Making Roads and Footpaths on their estate, situate in the Seven Sisters'-road, Islington.—Plans and specifications may be seen at their Committee room, the Rose and Crown Tavern, Tottenham-court road, on Friday, the 30th OCTOBER inst. Sealed Tenders to be delivered on or before EIGHT o'clock in the evening of the 6th day of NOVEMBER next ensuing. The trustees do not bind themselves to accept the lowest or any Tender.—By order,

SAMUEL STONG, Secretary.

The gas-fittings are suitable for a Church or other building in the Mediæval style, and are equal to new.—For particulars, apply to Mr. T. J. PERRY, Architect, Argyle Chambers, Colmore row, Birmingham.

DAVID JONES, Bridge Ironworks, and HERBERT'S Park Ironworks, Bilston, Staffordshire, Manufacturer, under license of the Patentee of MALLET'S PATENT BUCKLED IRON PLATES, for flooring, for railway and other bridges, viaducts, wharfs, &c. and for flooring, and other parts of fire-proof buildings, and various important structural uses. These plates form the lightest, strongest, best rigid, and durable flooring known. They were pronounced by the late Mr. Brunel, "the best bridge floorin, extant." They have been adopted at the New bridge, Westminster, on the Indian railways, and in many other first-class structures, by Messrs. Page, Hawkshaw, Read, Stephenson, and other engineers, and for fire proof buildings by Government, the War Office, Metropolitan Board of Works, and other important uses Specimens of the Buckled Plates may be seen at Bell wharf, Upper Thames-street, London. — Applications for lithograph circulars, prices, and other information, as to supply of the plates, to be made to the Manufacturer, as above; or to ROBERT MALLET, Esq. C.E. the Patentee 11, Bridge street, Westminster

Apply to
JOSEPH FAIRER,
Turret Clockmaker to Her Majesty's War Department,
183, St. George-street East, London.

MINTON, HOLLINS, & CO. Stoke-upon-Trent, beg to inform architects, the gentry, and others, that, in consequence of the increasing demand for their Encaustic and Mosaic Pavements, and with the view of facilitating the execution of orders, they have opened an additional Show-room, at their Establishment, No. 56, Conduit-street, London, where experienced draught-men will be constantly in attendance, to afford all information required.
DRAWINGS and ESTIMATES, on the receipt of plans, will also be promptly furnished, on application at the Manufactory, Stoke-upon-Trent.
MINTON & CO. take the present opportunity of stating that they have always in stock a large and varied assortment of tiles, suitable for flower boxes, stoves, and other ornamental purposes.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION 1862.
IMPERISHABLE TESSELATED PAVEMENTS, combining a highly decorative and economical substitute for ordinary floors of their perishable coverings. MAW & CO.'S Pattern-book, designed by M. Digby Wyatt, esq. together with a special design and estimate of cost adapted to any given dimensions of hall, passage, conservatory, verandah, frieze, &c. will be sent on application to Benthall Works, Broseley, Salop.
May be seen at the Exhibition of Building Inventions, &c. now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, free.
London Agents—W. B. SIMPSON & SONS, 456, West Strand, who have on view a great variety of Specimens of the Pavements.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, Wharf, Macclesfield street North, City road, E.C. Peake, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and Sedly, that the "Reasons of the Jurors," page 831, of the Great Exhibition, 1851, note the grant of a First-class Medal and rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION.
MAGNUS'S ENAMELLED SLATE obtained the Medal of the Society of Arts, the Prize Medal at the Great Exhibition, 1851, Two First-class Medals at the Paris Exhibition, and Two Prize Medals at the International Exhibition of 1862.
Trashy imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the name of "MAGNUS" is upon each article.
Chimney-pieces, Billiard-tables, Table-tops, Baths, Wall-linings, &c. a New Illustrated Catalogue of which can be had at the Pimlico Slate Works 39 and 40, Upper Belgrave-place, Pimlico, S.W.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the MUTUAL LOAN FUND ASSOCIATION (Incorporated by Act of Parliament, 1850), 14, RUSSELL STREET, Covent Garden, W.C. Advances from £50 to £5000 upon Freehold and Leasehold Property for any term up to ten years. Mortgages redeemed, and the advance can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the repayment of the advance taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, or competition for an advance, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.
EDWARD HARPER, Secretary.

ST. PANCRAS IRON WORK COMPANY,

OLD SAINT PANCRAS ROAD, LONDON, N.W.

APPROVAL OF THE ROYAL VETERINARY COLLEGE.

THE MEDALS OF ENGLAND AND FRANCE,

And the Medals and High Recommendation of the Royal Agricultural Societies of England and Ireland.

SECURED BY EIGHT SEPARATE PATENTS. LATEST, 1863.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick, or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

PATENT ENAMELLED TOP PLATE MANGER, with RACK & WATER-TROUGH,

The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

THE HALTER BALL, ATTACHED BY A NEW IMPROVEMENT, WORKS NOISELESSLY, AND ALMOST WITHOUT FRICTION.

PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible; advantages peculiarly their own.

THE PATENT HARNESS FITTINGS

Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

EVERY DESCRIPTION OF STABLE FURNITURE.

ILLUSTRATED LISTS ON APPLICATION.——INSPECTION OF SHOW-ROOM REQUESTED.

FIRE-PROOF CONSTRUCTION,—
FOX & BARRETT'S PATENT.

This improved system of fire proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

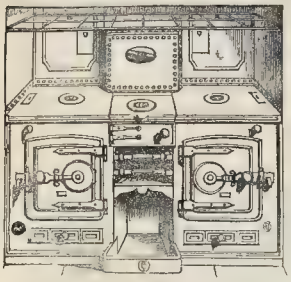
The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the Patent,

MR. BARRETT,
12, YORK BUILDINGS, ADELPHI

THE INTERNATIONAL EXHIBITION PRIZE MEDAL, AWARDED 1862.
ESTABLISHED 1744.



AUSTIN'S IMPERIAL PATENT SASH
and BLIND LINES,
To BUILDERS, CARPENTERS, and BLIND MAKERS.

J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,

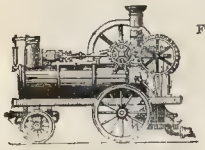
of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.

They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

FENDERS, STOVES, FIRE-IRONS, AND CHIMNEY-PIECES.

Buyers of the above are requested, before finally deciding, to visit

WILLIAM S. BURTON'S SHOW-ROOMS.



They contain such an assortment of FENDERS, STOVES, RANGES, CHIMNEY-PIECES, FIRE-IRONS, and General IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright Stoves, with ormolu ornaments, 3*l.* 15*s.* to 33*l.* 10*s.*; Bronzed Fenders, with standards, 7*s.* to 5*l.* 12*s.*; steel Fenders, 3*l.* 3*s.* to 11*l.*; ditto, with rich ormolu ornaments, from 3*l.* 3*s.* to 18*l.*; Chimney-pieces, from 1*l.* 8*s.* to 100*l.*; Fire-irons, from 2*s.* 3*d.* the set to 4*l.* 4*s.* The Burton and all other Patent Stoves with radiating hearth-plates.

WILLIAM S. BURTON, GENERAL FURNISHING IRONMONGER,

BY APPOINTMENT TO H.R.H. THE PRINCE OF WALES,

Sends a Catalogue, gratis, and post-paid. It contains upwards of 500 illustrations of his illimited stock of sterling Silver and Electro-Plate, Nickel Silver, and Britannia Metal Goods, dish-covers, hot-water dishes, stoves, fenders, marble chimney-pieces, kitchen ranges, lamps, gaseliers, tea trays, urns, and kettles, clocks, table cutlery, baths, toilet ware, turnery, iron and brass bedsteads, bedding, bedroom cabinet furniture, &c. with Lists of Prices and Plans of the Twenty large Show-rooms, at

PRIZE MEDAL, 1862.

These Ranges combine the latest improvements with great simplicity and durability. They afford facility for roasting meat in front of the fire without interruption to the action of the oven, hot plate, boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, and

CURE OF SMOKY CHIMNEYS,

these Ranges are unequalled. They are of all sizes and prices; and the large ones, fitted with Bath and Steam Apparatus, &c. form the most complete appointment for large establishments. Designs, &c. may be had on application at THE LONDON WAREHOUSE,

81, BISHOPSGATE STREET WITHIN.

"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept 6, 1862.

EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND.

MUSGRAVE'S PATENT STABLE and HARNESS FITTINGS

MUSGRAVE'S PATENT HARMLESS LOOSE BOXES.

MUSGRAVE'S PATENT IRON COW STALLS and PIGGERIES.

Architects who have not seen these fittings are requested to write for engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition.

They can be seen in first-class stables in almost every county in England; and MUSGRAVE, BROTHERS, are now fitting several very large establishments under direction of London architects, noted for employing only what is the best of its kind.

Musgrave's Patent Slow-combustion Stove

Is the nearest approach to Warming by Hot Water. It will burn in churches from Saturday till Sunday evening, without attention during the hours of worship. In halls will burn day and night for weeks, with little care. Capable of warming a large apartment for twenty-four hours, at a cost of 3d.; and deserving of special attention because of its safety, healthfulness, durability, and extreme simplicity.—For full particulars apply to

MUSGRAVE, BROTHERS, Ann-street Ironworks, Belfast.

LONDON-MADE ECONOMIC COOKING STOVE.

MANUFACTORY—LONG LANE, BERMONDSEY.

DEANE & CO. (THE MONUMENT), LONDON BRIDGE.

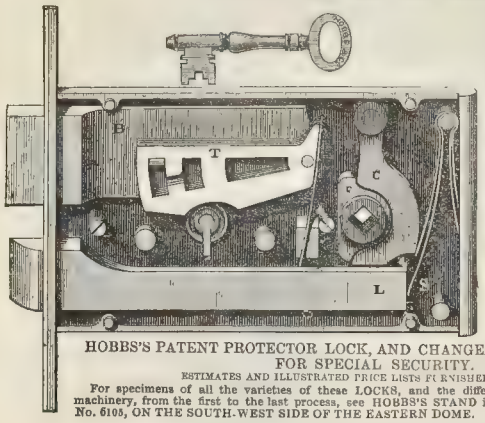
DEANE & CO. (THE MONUMENT), LONDON BRIDGE.

ESTABLISHED A.D. 1700.—ILLUSTRATED CATALOGUES POST FREE.



INTERNATIONAL EXHIBITION, 1862.—CLASS 31, LOCKS, &c. No. 6105.

HOBBS'S CELEBRATED MACHINE-MADE LEVER LOCKS,

Suited for all purposes, at Prices that silence competition.

SUITES OF LOCKS FOR MANSIONS, WAREHOUSES, AND OTHER LARGE STRUCTURES, WITH OR WITHOUT MASTER KEYS.

PUBLIC BUILDINGS OF EVERY KIND FITTED.

The parts in the Plate marked F and C show the form of Hobbs's Patent Frictionless Follower and Crank, by which a rolling instead of a rubbing motion is produced, thereby preventing friction.

S, s, shows the double spring, by which means the Latch is allowed to work independent of the Crank in shutting the door, thereby avoiding the necessity of slamming, at the same time sufficient strength is given by the Follower Spring to throw the heaviest knobs or handles.

HOBBS' PATENT FRICTIONLESS FOLLOWER, & DOUBLE SPRING FOUR-LEVER MORTISE LOCK, Price 8s.

FIREPROOF SAFES, IRON DOORS, CASH BOXES, &c.

HOBBS'S PATENT PROTECTOR LOCK, AND CHANGEABLE KEY BANK LOCK FOR SPECIAL SECURITY.

ESTIMATES AND ILLUSTRATED PRICE LISTS FURNISHED ON APPLICATION.

For specimens of all the varieties of these LOCKS, and the different stages of manufacture by machinery, from the first to the last process, see HOBBS'S STAND in the EXHIBITION, CLASS 13, No. 6105, ON THE SOUTH-WEST SIDE OF THE EASTERN DOME.

HOBBS, ASHLEY, & CO. 76, CHEAPSIDE, E.C.

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

BATH STONE OF BEST QUALITY.

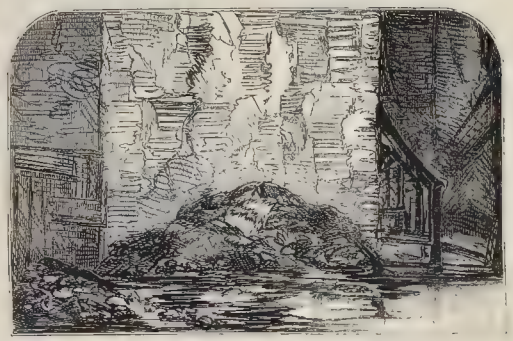
VENTILATION—PURE AIR.

Sheringham's Day and Night Ventilator

for the admission of Pure Air.

THROUGH THE EXTERNAL WALL.

These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 187 and 189 (late 117 and 118), Union-street, Borough, London.

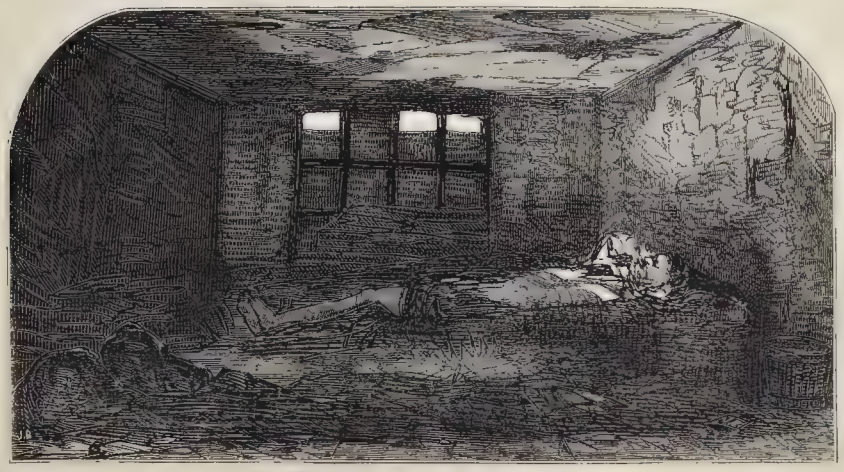


The Builder.

VOL. XXI.—No. 1082.

More Revelations of Bethnal-green.

NOTWITHSTANDING all that has been said on the subject elsewhere as well as in our own pages, the horrible condition in which a vast population are living is not yet understood and realized by the public. Nothing short of a personal examination, indeed, under proper guidance, can convey a complete idea of it. We must endeavour, however, by bringing the pencil to the aid of the pen, to make the facts a little clearer, and to urge on the authorities the absolute necessity for immediate steps with a view to bringing about a better state of things. Some of these steps, moreover, are quite practicable and not difficult. The Bethnal-green Vestry has met, and have endeavoured to cast discredit upon Dr. Moore, one of their medical officers, and to show that the condition of the parish is of the most creditable and satisfactory description. They accuse Dr. Moore of past doings, indignantly denied by him, and which, if justly founded, should have forced them before this to dismiss that gentleman from his office,—an office of vast importance to the poor. They quibble on the meaning of "blood-poisoning," and, in spite of the startling revelations which have been made from time to time for many years past,—for, be it remembered, we have pointed, on several occasions during years, to the miserable condition of houses in this parish,—the Board profess to be blind to the evils with which they are surrounded. Ultimately, they passed a resolution, calling on the Poor Law Commissioners to sanction Dr. Moore's dismissal from his office of medical officer of part of this district. Nine members of the Board voted for the dismissal, three against it, and four declined to vote at all. We do not regret this result, inasmuch as it affords hope of a searching inquiry, which may be the means of obliging the Board of Guardians to do their duty.



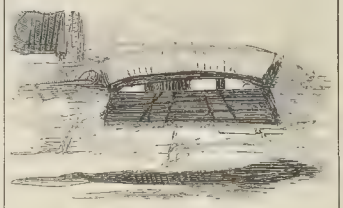
In connexion with this inquiry the Guardians should be prevented from disguising the truth. We should know how many of the majority of nine are interested in the poisonous and dilapidated dwellings in the parish. The Government, through the Privy Council, should order an independent, extensive, and careful investigation to be made by persons whom they may appoint. They should hear from Inspector Price what number of cellars are allowed to be occupied in a condition contrary to the law, and to the great damage of life and health. The Building Act should be brought to bear upon the dangerous and dilapidated dwellings which exist. Blocks of houses should be examined, and a note taken of the population of each room. The extent and nature of the water supply should be learnt; also the nature of the closet accommodation, and the manner in which the dust contractors and street scavengers do, or, rather, do not do, their duty. If this inquiry were rightly carried out, neglect of the worst kind on the part of the parish authorities would, we are satisfied, be shown.

A Back Garden in Nichol Street, Bethnal Green.

As matters are at present, the parish official arrangements for the preservation of the public health are next to none. There is only one sanitary inspector for this large district, which requires three or four active and intelligent men; and each day shows that the solitary inspector is unfit for his work. He has taken, as the public has heard, fees from slaughter-house keepers, and one member of the Board seriously gave it as his opinion, that the inspector had been too anxious to do his duty! and that his excitement had been mistaken for inebriation! How can we wonder at the state of the houses of the poor here under such guardianship? Change must be made in the present arrangements.

We have recently again carefully examined a considerable part of the district, including Grey Eagle-street, and the courts at the back of it, Phœnix-street, Nichol-street and its courts, Old Nichol-street, Half Nichol-street, and others. With few exceptions, each room contains a separate family; some consisting of mother, father, and eight children. The first two adjoining houses that we looked into, of six rooms each, contained forty-eight persons. To supply these with water, a stream runs for ten or twelve minutes each day, except Sunday, from a small tap at the back of one of the houses. The struggle for it is sometimes great: the means of storage are very small. The result is, as in other places mentioned by us again and again, that on Sunday there is seldom a drop of water to be found, and this of itself leads to a whole train of evils. The houses are, of course, ill-ventilated. The front room in the

The Cellar Dwelling of those who enjoy the Garden.



basement, wholly below the ground, dark and damp, is occupied, at a cost of 2s. a-week for rent. We tried our old test on the first two women seen standing at the doors. "How many children have you?" "Four," was the reply of the first of them. "Have you lost any?" "Five, and there is one inside given over by the doctor." The second had two living and had lost three. Many of the houses are in a dangerous state structurally, and some have been condemned under the Building Act. Here is the description the inspector of nuisances gave of these when he went to the magistrate at Worship-street on the subject. He said each room contained a man and his wife and six or seven children. The whole were filthy and dilapidated; the party-wall between Nos. 20 and 21 bulged at the basement to the extent of at least 2 feet, and the whole brickwork throughout was so much fractured that it might fall at any moment. In the basement of No. 20 a great quantity of the dust and house refuse had not been removed for fourteen years, and formed a mound, through which a pathway had been made, by constant treading, which led from and to the entrances at the back and front. The water for drinking purposes was derived from a small tub without a lid in the midst of this heap, but a very scanty supply was furnished, it not being on much more than twenty minutes at a time. There was no efficient drainage to take off the waste water, so that the basements were saturated by it, and pools of stagnant water collected in the yards, which were unpaved, and contained a quantity of putrid vegetables, that had not been removed for a long time!

In George's-street three children have died in one house, and the rest of the family have been made ill, through the badness of the drainage and the want of pure air.

The occupation of the underground rooms here, as well as elsewhere, is illegal, and may at once be prevented. Under the Local Management Act, as our readers may remember, an underground room may not be occupied separately as a dwelling unless certain conditions are complied with, one of which is that there shall be a window of specified size, with an area before it open down to 6 inches below the floor of the room. The terms of the Act, however, have led to the belief that the duty of discovering the occupancy of such rooms rests with the district surveyor appointed under the Building Act, whose duties are entirely structural, who is quite unfit to serve as sanitary policeman, and moreover has not power under the Act to prove his case if he were to try. For the most part, therefore the Act is nugatory,—we had nearly written, with Hood, *Newgatory*,—excepting where, as in Islington and some other parishes, the inspector of nuisances or other qualified person obtains the proof of occupancy, calls on the district surveyor for a report as to the structural deficiency only, and carries the case before a magistrate in accordance with the Act.

This should at once be done in Bethnal-green, and scores of murderous dens would be shut up. It is no answer to say the inhabitants prefer to live, or (more truly) to die, in such rooms rather than meet the difficulty of finding a better room elsewhere. They must not be allowed to do so. Suicide is not permitted; still less suicide that leads to the death of others not desiring to die, and to the pauperising of a still larger number, who must be maintained by the more sensible and provident.

One of the worst examples that we saw of these underground rooms we must endeavour to illustrate. It is in Nichol-street, No. 59, and may be described as entirely below the surface. The window of the apartment is a little over 3 feet in width, and about the same in height; the area is even with the breadth and depth of the window. It extends from the wall about 2 feet, and was closed with an iron grating; but this having become broken, the entire top of the area has been covered with wood, so that the only means of light and ventilation is a chink 3 feet wide by 4½ inches in height. Passing through the passage

Light and Air for the Cellar Dwelling.

to the back, the dilapidated condition of the premises, as may be seen in the sketch, is startling. The plaster has fallen from the walls and ceilings, the narrow staircase is rotten and shaky, the general colour is of a dingy smoky black, with peeps of indifferent brickwork and broken laths. At the back there is a large open space, in a most filthy condition; damp refuse of all kinds is piled up against the wall; there is no supply of water; the people have "to hunt for it:" nor is there any distinct closet accommodation for this house. When looking at the wet and poisonous mound, at the ill-built wall through which the damp and unwholesome matter must weep, and seeing that in all directions similar neglect of proper scavenging is evident, we cannot but insist that it is disgraceful to the parish. But as regards the cellar, in all our experience of London destitution and awful conditions, we have seen nothing so harrowing as what there met the view. Through the narrow space of the window that is left open there came a glimmering light, which fell upon two figures, on a broken truckle, seemingly naked, with the exception of some black rags which passed across the middle of the bodies; but the greater part of the room, small as it is, was in total darkness. In this profound depth our sagacious guide, Mr. Price, thought that there were more figures visible; and on asking if any were there, a female voice replied, "Yes; here are two of us. Mother is out;" and gradually, as the eye became accustomed to the gloom, two other figures were to be seen lying in a corner upon rags. This was between twelve and one o'clock in the day. We were not disposed to look further into their mystery; but it was evident that one of the unfortunates was resting close to the damp and poisonous wall. Neither words nor drawing can convey a complete idea of this den and its dense and polluted atmosphere. Instead of this place being filled with the pure life-giving air which is needful for human existence, it seemed occupied by something tangible which might be moved and weighed. The height of the room, all of which is below the surface, is not quite 6 feet. The window would not open; the ceiling was ready to fall; and the walls, so far as the light showed, were damp and mildewed. The inmates here were a widow and her four children: one a girl twenty years of age, another girl eighteen, a boy of fourteen, and a boy of twelve. What, we ask, is to become of those unhappy creatures, reared in the dark and the dirt, and of the multitude who in this metropolis are "dragged up" under similar circumstances?

For four such rooms as we have attempted to describe, there are paid on the whole 12s. a week; that is, 31*l.* 4s. per year. Another similar cellar, not quite so dark or so damp, we found occupied by a man and his wife and six children, aged respectively fourteen, eleven, nine, six, and four years, and one ten months. We could draw a frightful picture of what met our sight in an upper room of a neighbouring house, but it would not further our present object, which is practical and precise,—to call for a sufficient water supply; the periodical removal, at short intervals, of all refuse; and the enforcement of the law in respect of the occupancy of underground dwellings.

We returned from the inspection saddened and ill. We have written of it coolly, but it was a sight to move indignation.

LONDON WITH THE LONDONERS OUT OF TOWN.

London is still out of town. Casual visitors to the west and south-west suburbs may thread street after street, and not see a blind drawn up, or a shutter unfastened. The broad gravel paths in the parks and Kensington Gardens are but scantily peopled, and that only by persons making short cuts across them: the waterfowl look wistfully afar, and up into the clouds, and down into the depths: acorns, horse-chestnuts, and beech-nuts are lying hid in the grass under the trees: the seats are nearly all unoccupied. You may cross the most frequented drives without a moment's delay, at any crossing. No one is idly leaning over the railing, for there is nobody to stare at. Rotten-row is a desert: the rumble and splash of the water-carts are to be heard long after they have passed. Even soldiers seem scarce, and the park-keepers might be taken for anchorites. The glassless domes of the International Exhibition look like the commencement of a huge web some great spider is thinking of spinning over the neglected building. Cabs are to be had at any hour of the day or night, in rain or sunshine, at any stand: a fallen horse fails to attract more than a handful of bystanders: the crossing-sweepers have either removed or retired upon the competencies gleaned on departed seasons; and it is impossible not to wonder what has become of the thousands who, only a few weeks ago, walked, lounged, drove, and rode in these comparatively silent quarters. Yet, let any one turn his eyes Citywards, at night, from these suburbs, and he will see the old lurid glare over the house-tops, hear the old sullen roar in the air, and feel that London is still London, and exists in all its might and majesty, unaffected by the exodus of a population.

The fact that the metropolis is, however, to a recognisable extent, out of town, and confidently and speedily expected home again, is most apparent in the large number of alterations and redecorations of premises now being effected. A very general impression appears to prevail that roofs should be raised, dormers thrown out, wings added, porches brought forward wherever practicable. The new Rothschild mansion in Piccadilly, towering over Apsley House, has created an uneasy emulation in the more lowly roof-tops edging Park-lane and overlooking the Green Park. Scaffolding may be seen insidiously making its appearance in both places. The house adjoining the Duke of Buccleuch's new mansion at Whitehall is raising a story: a new wing is being built to Carlton Gardens: the club-houses in Pall-mall are in various stages of re-decoration; and one in St. James's-street is renewing itself, and throwing out a prodigious bay window. In Parliament-street the new Foreign Offices are covering acres of ground. Charing-cross, with its new railway bridge and station, is donning a new aspect. In the same locality the theatres have entered into the movement, and have been re-decorated with skill, and, we may add, with speed, having been closed but a few days for the purpose. Further towards Old London, Blackfriars is throwing another bridge over the river, and a cluster of new commercial palaces is growing apace in Fenchurch-street. North of Oxford-street the Portland-place Hotel is building; the German Fair rebuilding, after narrowly escaping the possibility of being converted into a chapel for Unitarians instead, 10,000*l.* having been offered for the site, it is said, by members of that body; and alterations are going on in the corner-house in Cavendish-square, where the old Princess Amelia lived, with whom Horace Walpole delighted to play *whisk*. The low, dingy houses facing the Great Western Hotel are shut up, and are to be straightway razed for improvements connected with the Metropolitan Railway.

Further westwards we may see the character of districts completely changed and changing. Places that were considered rural and retired only ten years ago, have become centres of commercial activity. Westbourne-grove, only recently a double line of semi-detached villas, with gardens before and behind, is now a thoroughfare of good shops. The Queen's-road, in everybody's remembrance quite a lovers' lane, as far as quiet and leafy shades could make it so, is now as business-like as Edgware-road, one side being an uninter-

rupted succession of smart shops, and the gardens in front of the houses on the other side being one by one covered over and converted into shops also. The commercial aspect of Edgware-road now only ceases a short distance from Kilburn-gate, and beyond that obstruction it again takes possession of the highway for a length of road nearly reaching to Willesden-lane. Ten years ago, too, people living on Maida-hill looked out of their windows upon fields that stretched away to Pinner and Harrow: now they look upon a new neighbourhood of streets that has completely walled them in, known as the Warrington Estate. Belsize Park, in which there are still trees of a century's growth, has succumbed to the march of bricks and mortar, and permitted the inroad of labyrinths of streets that will ultimately bear comparison with Belgravia. Leaving new schools, churches, chapels, and a synagogue behind in a new district forming north of the Paddington Canal, and crossing over towards South Kensington, we may see nearly half the mansions in Palace-gardens extending their borders for additional accommodation; and coming to the Museum, we shall pass the new range of brick buildings just finished for the Art-training School, and find decorators at work in the Loan Courts, experimentalising with colours. In fine, London appears at all points to be making ready, not only for the return of its absentees, but for a still larger number of residents.

THE INSTITUTE OF BRITISH ARCHITECTS.

A new session of the Institute of Architects is about to commence, and the opening meeting is announced. We have yet to hear if the unwise regulations passed some time since by a section of the council to prevent publicity,—to exclude reporters from their meetings, and to confine to the narrowest possible circle any information that might be communicated in papers read there,—have been rescinded or not. Every clear-headed well-wisher of the Institute must hope with us that this has been or will be done. To the outer world last session the Institute was as though it were not. The papers, six of them, by the way, contributed by amateurs, instead of being distributed far and wide over the kingdom, reprinted from our pages in America and India; and, translated from the same source, in France, Belgium, and Italy, as was constantly the case before (and so carrying out, as we maintain, one of the great objects of the Institute), are in the hands only of the 400 or 500 members of the Institute. Who is benefited by the injury done? It would puzzle any to say. It should be the aim of every architect and lover of the art to spread abroad a knowledge of it, and to interest the public in it as widely as possible. The present improved position held by the profession is mainly due to the spread of this interest and knowledge, in effecting which we humbly claim to have played a not inconsiderable part. One of a dozen correspondents on the subject who touch this point says,—"There is, indeed, nothing more advantageous to professors of art than the *art* education of the people, which must inevitably advance the position of its professors, pecuniary and otherwise. Is there any better way of ensuring this than by members of the profession first educating each other and then the people? And is the adoption of the resolutions of the council a step in this direction? Surely the members at large will come forward and help to obliterate this blot from the annals of the Institute."

In one or two of the provincial archæological societies the same narrow and unwise feeling has been lately manifested,—in societies actually formed and supported for the express purpose of interesting the public in our ancient buildings with a view to induce their intelligent maintenance. At a meeting of one of these last season Sir Gardner Wilkinson read a paper on a subject that would have interested many of our readers, and would gladly have seen it in these pages. On his application, however, to the reverend honorary secretary of the society, this was forbidden, on the ground, we believe, that it would make the Transactions of the society less valuable! Whether or not it has ever been published in these Transactions we have not heard. In either case, it is locked up and put away.

Statesmen have a different feeling on such matters: they know better. If Lord Brougham deliver a social science address, or a Chancellor of the Exchequer delineate and comment on the life of a Wedgwood, the first thing done is to supply the reporters with copies of the oration, often even before it is delivered, so that the reader may appeal to the largest possible public, and that such advantage or delight as is obtainable from the address may be afforded to the largest number. Any contrary policy is simple stupidity. Even in a commercial point of view, if, for example, it be sought to sacrifice the real object of the Society to the possibility of selling a few copies of the Transactions, it would probably fail in its effect. Which are the novels that sell the most largely, that go through three, four, or five editions? Those that already have been the most extensively circulated in some periodical work. We suppose, however, the council of the Royal Institute of British Architects would scarcely stoop to justify their resolutions on such grounds. "There is that scattereth and yet increaseth; and there is that withholdeth more than is meet, but it tendeth to poverty."

Writing entirely and merely in the interest of the Institute, the art, and its professors, we shall be heartily glad to hear that the suicidal resolutions in question have been rescinded, and that we can again give our aid, as we had given it for long years, to advance the right objects of the Institute.

FOREIGN ARCHITECTURAL AND FINE-ART SERIALS.

The printing presses of central Europe are vying with those of Great Britain in the production of illustrated serials relating to architecture and the sister arts. Many of these have illustrations richly coloured and gilt, some of which have been coloured by hand with exquisite finish. There are others which are simply illustrated with ordinary copper-plate engravings and lithographs; and others tinted by chromo-lithographic processes. They are for the most part folio-sized, and enclosed with loose grey, green, salmon-coloured, blue, or brown paper wrappers, but little indicative of the delicate execution of their contents. France, as we might expect from the specimens of French art with which we are familiar in the works of M. Viollet-le-Duc and M. Cæsar Daly, is especially vigorous in the production of fine-art and architectural serials. The presses of Paris and Lyons are issuing illustrated works on furniture; sculpture; decorative painting; missals; ceramic art; Palissy ware; archives of historical monuments; chateaux of the Renaissance period; monuments of the same; ancient fortified cities, fortresses, and castles; modern French villas, palaces, hotels, houses, and castles; on the Sauvageot collection; and enamels. Berlin is issuing an illustrated work on buildings and monuments; Carlsruhe another on building construction; Hanover a large folio illustrating the architecture of Lower Saxony; Leipsic a folio on Italian Renaissance; Darmstadt and Carlsruhe smaller folios, showing ancient and modern Swiss houses; and Milan is producing a large folio relating to celebrated Italian families, containing portraits of them reproduced by hand from paintings preserved in various convents, galleries, and palaces. It is not too much to say that no one would look upon and study this rich crop of foreign serials without feeling the strength of our foreign *confrères*. The beauty of German lithography and chromo-lithography is, as usual, prominently striking; and the French sustain their prestige for execution of wood-cuts and engraving. Several are published without letter-press, and therefore need no translator; but the greater portion supply copious information concerning the subjects of which they treat. The prices are not incommensurate with the cost of their production; and they certainly must be considered valuable additions to our stores of art-lore. We propose to introduce our readers to the contents of the latest numbers of some of the more important; and at the same time to review these specimens of Continental art and feeling.

Archives de la Commission des Monuments Historiques, publiées par Ordre de Son Excellence, M. Achille Fould, Ministre d'Etat. Livraisons, 82, 83, 84. 1863. Paris: Gide, Editeur, 5, Rue Bonaparte.

Three parts of this superb work, first published by order of M. Fould, the Minister of State of the French Government, in 1856, are in this instance issued collectively. They comprise but six large plates of ancient buildings. Under such auspices we should naturally look for a superlative degree of excellence to be apparent in them; nor would either architect or archæologist demur to the quality of their execution. M. Viollet-le-Duc contributes two plates of minute finish; the one being a longitudinal section of the *Eglise d'Eu*; the other an elevation of the church of St. Saturnia de Toulouse; and M. Félix Duban contributes four plates of equal execution: they illustrate the Château de Blois. One of them shows the external spiral octagonal staircase in the court-yard of the château, with its rich decorations on the balusters, balconies, and statues on the angles of the octagon, built by Francis I.; two others show the apartments of Louis XII.; and the fourth shows one of the façades of the latter after its restoration. This renovation appears to have been carried out with much discrimination; no offensive addition strikes the eye; the only new work apparent after the restoration being portions that were before missing of the old finials, new open parapets to the eaves, new vanes, new ridge tiles, and a little attention to the chimney stacks. This official folio is certainly not unworthy of its origin, and may fairly take a place among the other great works of the French Imperial Government. The eighty preceding numbers present a rich feast, as may be believed from the circumstances out of which the publication has arisen. Every year the French Government sets aside large sums for the conservation and reparation of ancient monuments of Classic and Mediæval art in France. This fact calls into requisition numerous plans and drawings to make known to the Minister of State the condition of the edifices in question, and the nature of the repairs they require. By these means a vast accumulation of accurate information is gathered together in the shape of the measured drawings of the most important ancient buildings by the most eminent French architects. The Minister of State wisely recommended the Emperor not to let this lie and rot in some mouldy record-office, but to publish it for the benefit of the public. The commission to whom the matter was entrusted resolved to make no distinction between the styles or the schools, but to admit illustrations of the works of the Romans as well as of the crude structures of the early Christian ages and those showing the wondrous strides made in the Middle Ages. Accordingly, the purchaser will find a very varied as well as instructive collection, ranging from the aqueducts raised nearly two thousand years ago to the châteaux of a *régime* but lately passed away; and he will be ready to acknowledge in this instance the value of what our neighbours call the "*surveillance spéciale*" they have exercised upon these materials for history. As a further sample of the contents, we may cite the fortified city of Carcassonne, which is shown in several sheets in its present state, and as proposed to be restored by M. Viollet le Duc, with every tower covered with a conical roof, every parapet armed with *houards*, every gateway fortified with outer barriers, and the now slumbering city aroused, alert and bristling with the full panoply of defensive warfare; the *salle synodale* of the Archbishop of Sens; the amphitheatre at Arles; the churches of Notre Dame de Laon, Notre Dame de Beauné, and that at Vezelay, which could all be rebuilt from these drawings, should occasion require, without the wrong-placing of a stone. The price of each *livraison*, or number, containing two plates and four pages of text, is 5 francs and 6 francs, according to the quality of the paper on which it is printed; and the first series will comprise 120 parts. Some of the plates are coloured, and others are of double size: these are counted as two. Among the architects' names affixed to the drawings will be found, besides those we have mentioned, those of MM. Lassus, T. Desjardins, P. Abadie, Alph. Durand, E. Bœsvilvald, J. Merindol, Qœstel, E. Millet, J. A. Laisné, A. Dennelle, &c. The engravers are MM. A. F. Lemaitre, Sauvageot, A. Guillaumot, Penel & Soudain, Gaucherel, J. Huguenet, J. Sulpis, Bury & Sulpis, Loudain Gibert, R. Pfnor, Regamey, &c. MM. F. Chardon, aîné, & A. Delatre are intrusted with the printing of the plates, with the exception of those executed by chromo-lithography, which have been undertaken by M. Lemercier.

Recueil de Faïences Français du XVI. Siècle 300 exemplaires. No. II.

Monographie de l'Œuvre de Bernard Palissy, suivie d'un Choix des Ouvrages de ses Continuateurs ou Imitateurs dessinée et lithographiée par MM. Carle Delange et C. Borneman; avec Texte par M. Sauzay, conservateur adjoint au Louvre, et M. Henri Delange. Paris: Chez l'Editeur, Quai Voltaire, 5; M. Rapilly, Quai Malaquais, 5; et les principaux libraires ou marchands d'estampes. Londres: Chez MM. Barthès et Lowel, 14, Great Marlborough-street. 1862.

The publication of this work will be completed in 1864. It will contain not less than 100 folio-

size plates, each one of which will represent one or more objects, according to their size. The price for the entire work will be 400 francs, which sum must be paid in eight instalments of 50 francs each, at intervals of three months during its publication. The present number contains the life of Bernard Palissy, chemist, physician, geologist, agriculturist, and *céramiste*, whose name is one of the gems with which seventeenth-century French art is studded; and the plates in it portray specimens of his wares preserved in the Louvre. The colouring, the design, and the poetical feeling displayed in Palissy's ware need not be enlarged upon; they are felt and acknowledged by all. The specimens selected for illustration are an oval dish, with a figure of Summer, *L'été*, cutting corn, which, with all due deference to M. Delange, would be more appropriately called Harvest; a figure of Neptune striding a sea-horse, on a short stem formed of dolphins, the foot of which is formed by their heads; a flambeau, several plates, a *bassin d'aiguière*, forty-two centimètres and a half in diameter, on which are depicted figures emblematical of the elements of science; a most graceful figure of La Madeleine in the desert kneeling, with folded hands, upon a bank of ferns and other wild plants; and another large oval dish representing the family of Henry IV. These plates convey an excellent idea of the originals, and are all faithfully coloured.

L'Art Céramique au XIX.e Siècle; ou, Recueil de Dessins, Formes, et Decorations en Grandeur Naturelle, à l'usage des Fabricants, des Sculpteurs, et des Peintre-Décorateurs qui travaillent la Porcelaine, la Faïence, et les Christaux, et des Artistes et Industriels qui s'occupent de la fabrication des Bronzes, de l'Orfèvrerie, des Meubles de Luxe, Objets d'Art, etc. Compositions nouvelles produites par nos meilleurs artistes, ingénieurs pratiques. Felix Desmé, Directeur de la publication, à Sèvres. On s'abonne au bureau de la publication, ou adresser franco un mandat à M. Felix Desmé, Directeur de l'Art Céramique, Rue Bonaparte, 17, Paris.

We might acquit our continental neighbours of the charge we used to bring against them of old, namely, that they had no talent for business, if we had no further proof of their commercial ability than the ingenuity with which so many persons are pointed out as being likely to be benefited by the purchase of the work on porcelain, crockery, and glass, by M. Desmé, of Sèvres. Two editions of it are issued; one *noir* for 21 francs; another *colorié* for 42 francs. All the drawings are new; they are coloured with the greatest care; no expense will be spared to render the publication as useful as possible; and happy is he, continues M. Desmé, to contribute, according to the measure of his strength, to the propagation of a knowledge of the *chefs d'œuvre* of ceramic art and of the progress of an industry which has kept its place among the arts from the most remote antiquity down to the present day, and which addresses itself to so large a number of *industriels* and artists, manufacturers, sculptors, decorative-painters, workers on porcelain, earthenware, crystal, bronze, goldsmiths manufacturers of furniture *de luxe* and *objets d'art*. Vases, a *tasse à café*, *verres de fantaisie* (glasses cut and engraved), decorations for vases, parts of which are coloured with delicate tints as samples, *coupes de fruits* (dishes or stems for fruits), of different forms and varied decorations, are the subjects illustrated in the present number. They fall far short of the richness, warmth, and fulness of colouring of the Palissy ware illustrated by MM. C. Delange and C. Bonneman in the "Recueil de Faiences Français du XVI.e Siècle." The present revival of artistic beauty in ceramic wares, however, is to some extent assisted by every work on the subject.

Archio. fur Nieder-sachsens Kunstges-chichte. Herausgegeben von H. Wilh. H. Mithoff. iii. Abtheilung v., vi., vii. lieferung. Hannover: Helweng'sche hofbuchhandlung.

This unusually long folio, from Hanover, recording the progress of the fine arts in Lower Saxony, temporarily cased in a paper cover, is full of illustrations, in which architects, builders, sculptors, artists, and artist-workmen would alike delight. Exteriors of churches, market-houses, market-places, with their arcaded and gabled and half-timbered surrounding houses and central drinking-fountains, plans, sections, and details of Rathausen, Kappellen, and Gildehauses; interiors rich in carvings and paintings and trophies of flags and weapons; quaint corners and bits of still quainter street architecture, doorways, dormers, window-seats in deep recesses in old houses, charming oriels, captivating little spirelets, odd winding staircases with carved balusters, gateways whose foliaged archways seem ripened in the suns of many centuries, sly windows, artfully ornamented to make them more and more impossible to pass without staying to sketch them, cunningly carved and corbelled external dados, steep roofs pierced with four or five tiers of dormers, with still more startling gables intersecting them, which cover projecting bays and oriels; hooded fireplaces, carved beams and pillars, balustraded galleries, and other curious features in rich burgomasters' houses, carvings, timber-work, stone-work, and glazing of the most picturesque and pleasing kinds. If this number of this work could be extensively circulated, Hanover and Lower Saxony would be stormed next season by travelling students, and the fortunes of the inn-keepers made in a summer. Mechanics' institutions and literary and scientific libraries should place such works as these in the hands of the many; they would serve to extend sympathies and appreciation, and to awaken interests that could not but be productive of happy results.

Les Evangiles des Dimanches et Fêtes de l'Année, suivis de Prières à la Sainte Vierge et Aux Saints. Texte revu par M. l'Abbé Delaunay, curé de Saint-Étienne-du-mont. Désigné par Monseigneur l'Archevêque de Paris. 400 pages de texte, encadré dans les plus riches ornements et cent miniatures. Reproduction des Œuvres de Jehan Foucquet, H. Memling, Albert Durer, Giulio Clovio, Beato Angelico da Fiesole, Atavante, Lorenzo Monaco, etc. etc. Extraites des plus précieux Manuscrits de Paris, Londres, Oxford, Bruxelles, Munich, Turin, Milan, Venise, Bologne, Florence, Sienne, Rome, Naples, Saint-Gall, Rouen, Lyon, Grenoble, etc. etc. 56e livraison, 15 Août, 1863. Paris: L. Curmer, Editeur, 47, Rue Richelieu, au premier. Six francs la livraison.

In this livraison we have the fifty-sixth number of a gorgeously illuminated work, containing the gospels for Sundays and festivals, and prayers to the saints and to the Holy Virgin, printed in gold and colours, with much sumptuousness. To such of our readers who may be practising the very attractive art of illumination, we would especially commend a study of both the colouring and execution of the plates, showing borders that are applicable to many purposes. Miniatures of Samuel, anointed by David, Saint Michael and Saint George, are also excellent examples. Accredited as this work is, we can easily understand that considerable importance is attached to it by our neighbours on the other side of the Channel. It is a most costly undertaking, and should be appreciatingly supported.

Journal-Manuel de Peintures appliquées à la Décoration des Monuments, Appartements, Magazins, etc. etc. Bois, Marbres, Lettres, Attribut, Imitations de Moulures, etc. Dirige par Petit et Bisiaux, peintres-décorateurs. 14e année, No. 7, July, 1863. Paris: A. Morel et Cie, Libraire-éditeurs, 18, Rue Vivienne. (Il parsît chaque mois un numero composé d'une feuille de texte in folio et deux planches.) Prix de l'abonnement annuel, 22 francs.

This is a folio serial in its fourteenth year of publication. As its name implies, it is intended for the use of painters and decorators. It contains two specimens of panelling, in chromo-typography: the one has scroll-work painted in each panel, with marble pilasters between each; the other is simply a green surface, the mouldings and framework of which are picked out with appropriate colours. The letterpress consists likewise of two sheets, or four pages, and contains technical information of considerable value. Among others there is a short essay upon the influence of the essence of turpentine, *terébenthine*, upon the health of painters, and of persons who inhabit an apartment newly painted, by M. Pawlowski. This states that M. Leclaire, of the Academy of Sciences, after experiments made upon animals placed in boxes of fir-wood, of 1 mètre cube, in which the internal sides were painted, the one with white lead paint, and the other with white zinc paint, both mixed with the essence of turpentine, establishes the following facts:—1. The animals did not suffer sensibly as long as there was a current of air in the case. 2. The animals suffered in the first twelve hours, when the current of air had been suppressed; but afterwards they gradually recovered, and neither of them succumbed in the course of the experiments. 3. Not one of the animals suffered in the boxes after the painting was dry. M. Leclaire concludes that the emanations of the oil of turpentine which are exhaled from paint in apartments where there exist currents of air are not dangerous either for the working painters or for persons who inhabit them, and that paint does not present any danger even while there does not exist a current of air when it is dry. But, adds M. Chevreul, "that which appears to me should interest persons who devote themselves to the sciences and to profound hygienic researches, is the happy idea of M. Leclaire to see if the vapours which are exhaled from paint *à l'essence* would be absorbed by distilled water." The part is made up by brief chapters upon "Execution and Palette," "Canvas for decorative Painting," for which a M. A. Binant obtains honourable mention from the Paris and London Exhibitions of 1861-1862; "Varnish and Polish," and "Technical Vocabulary."

Les Emaux de Petitot du Musée impérial du Louvre. Portraits de Personnages historiques et de Femmes célèbres du Siècle de Louis XIV. gravés au burin par M. S. Ceroni. Paris: Blaisot, Marchand d'Estampes, Libraire-éditeur, 178, Rue de Rivoli. 1863. 40 livraisons. Deuxième volume.

The last number of this fine-art publication, intended to illustrate the Petitot enamels preserved in the Louvre, is devoted to a memoir of Madame de Maintenon, written by M. Emile Chasles, and accompanied by an engraving of pearl-like luminousness of her portrait from the collection in question, by Ceroni. She is described as beautiful, virtuous, and unfortunate, when, in 1668, as the widow of a poet and governess of the children of Madame de Montespan, her predecessor in the affections of Louis XIV., she first attracted the attention of that monarch. Her history is familiar to English readers. Born in the prison of Niort, where her father, Constans D'Aubigné, was confined, she was taken, on his release, to Martinico. Thence she was sent to France, and confined to the care of her aunt, Madame Villette, who was a Protestant. She was claimed, however, by another relation, who wished her to enter the Romish church. It is urged that it was to escape from the severities of this relative that she married Scarron, the author of "Virgil Travestied," the "Comic Romance," and other celebrated pieces. Her zeal and discretion, when governess of Madame de Montespan's children, awoke the regard of the king, who increased her pension, and ultimately bestowed upon her a title and estate. She is assumed to have been secretly married to the king in 1685. The nine volumes of her letters that have been published prove her to have been a person possessing more than the average ability of French ladies.

Musée Impérial du Louvre. Collection Sauvageot, dessinée et gravée à l'eau-forte par Édouard Lièvre, accompagnée d'un texte historique et descriptif. Par A. Sauzay, Conservateur-adjoint des Musées Impériaux. Seventh livraison. Paris: Noblet et Baudry, Libraires-éditeurs, 20, Rue Jacob. 1863.

This is another of the works for which the inexhaustible stores in the Louvre have furnished the illustrations. It is written with a due appreciation of the value and poetry of ancient workmanship. The illustrations are etchings of the rare pieces of furniture, jewelry, armoury, &c., collected by M. Sauvageot, and now deposited in the Louvre, skilfully executed. French furniture of the thirteenth and fourteenth centuries was decorated by marqueterie and by paintings. These decorations were succeeded by rich stuffs. The monk Theophilus, in his essay upon the arts, *Diversarium Artium Schedula*, pointed out the mode to be pursued in painting furniture after it was properly prepared:—"With the poinçon, the compass, and the rule, dispose your work; that is to say, the images, animals, birds, leaves, and all that you would draw upon it. That done, if you would ornament your work, you will apply to it, as a foundation, leaves of gold." There are specimens of this and of the succeeding modes of decoration given, as well as of several miscellaneous articles; among them the *monture d'escarcelle*, of early seventeenth century workmanship, supposed to have belonged to Henri II. The words *d'alloyere, d'aumosinère, d'escharcelle*, and subsequently *d'escarcelle*, were terms successively applied to a sort of pouch, or bag of leather, or velvet, or of satin, embroidered with silk and gold threads, which everybody carried hanging from their waists, as introduced by the crusaders and pilgrims. French antiquaries differ as to the exact purpose for which these pouches were used. M. le Comte de Laborde thinks that one form of it, known as an *aumônière*, was destined to carry

the alms the owner meant to distribute; and that another form, the *escarcelle*, was used as a pouch or coffret. By an oversight, the material of which the mounting is wrought is not mentioned. It is ornamented with figures and foliage.

Schweizerische Architectur in Perspektivischen Ansichten, Grundrissen, Schnitten, Façaden und Details. Mit erklärendem text Herausgegeben von J. Hochstetter, Professor der Architectur und Kunstgeschichte an der Grossh, Polytechnischen Schule zu Carlsruhe, Correspondirendes Mitglied des Archäologischen Instituts zu Rom, &c. Erste Abtheisung. Holzbauten des Berner Oberlandes; Aufgenommen von C. Weinbrenner und J. Durm. To Heft. Carlsruhe, Verlagsencenthum von J. Veith. Hinterlegt bei Grossh. Bad. Ministerium des Innern.

This consists of a series of designs and details of modern Swiss houses, in colours, published at Carlsruhe. This style does not depend upon the plan for movement. A quadrangular block plan, when surmounted with a Swiss wohnhaus with overhanging covered galleries and projecting roof, its notched wooden buttresses and corbelled brackets, is as pictorial an object as could be desired. The fronts of the overhanging galleries, or continuous balconies, are of wood perforated with a pattern; and the barge boards with which the spaces between the tops of the windows and balconies are always filled, overlaying each other, are of the most diverse designs. Every barge board has a design of its own. When there are four, they are all cut into different forms of ornament. Neither is the style dependent on the windows for expression: they are for the most part square or oblong, and filled with small square panes, or in a few instances quarrels in a diaper of lead work. The inscriptions in German text upon many of the houses are a very pretty source of ornament. And the rustic palisading round the several houses is another national peculiarity that strikes the attention: these are of every possible form and combination into which stakes and planks could be driven or lashed. We might indicate for especial notice a wohnhaus in Wilderswyl, illustrated in handsome coloured perspective. This is a square timber house of two stories, with an attic in the apex of the roof. It is built upon so high a foundation of stone, that eleven steps are required to reach the entrance, which is placed in one of the sides. Between the first and second stories runs a balcony projecting on corbels all round the house; and over all projects the flat-pitched tiled roof, the wide-spreading eaves of which are supported by corbelled brackets which die into pilasters and descend to the foundation. The exterior of the roof is dotted with large rough stones, placed at intervals upon it. In the space over the second story, and under the two windows which light the attics in the main front, there is an inscription extending across the whole width of the structure: this is placed upon a board ornamented with mouldings which slightly project, and is supported by corbels. There is no letter-press. But none is required: the drawings speak for themselves. People accustomed to our suburban imitation of Swiss cottages would be surprised at the difference between them and the strong weather-defying structures that are building in Switzerland. There is not more difference between the surrounding scenery of a London Swiss cottage and a Zurich one than there is in their construction.

We must carry on our list in another paper.

THE BRITISH ARCHÆOLOGICAL ASSOCIATION IN YORK.

The final excursion of the association at the late anniversary was made to the city of York. They were conducted in a special train on the North Eastern line, *viâ* Harrogate and Knaresborough. As soon as the party, which included a number of ladies, reached York, they crossed the new bridge which spans the river Ouse at the well-known Lendal ferry. Thence they proceeded to view the Multangular Tower just within the grounds of the Yorkshire Philosophical Society, and from that unique memorial of both Roman and Norman times, they passed on into the grounds themselves, in which are innumerable objects of great interest to antiquaries, archæologists, artists, scientific men, and searchers into human knowledge in general. The Rev. J. Kenrick was very courteous in leading the excursionists from object to object, and offering such observations as time and other circumstances would permit. The grounds, as many of our readers know, contain the remains of St. Mary's Abbey, with those of some of the buildings which in days of old belonged to the monastic establishment bearing that name. Mr. E. Roberts pointed out in a portion of the ruins a curious pier, which he described as architecturally, a mass of contradictions. He expressed the opinion that the building of which it formed part had been erected about 1210-20, and that it had been worked up with some elaborately carved stone of fifty years earlier. The Hospitium, in which is displayed a vast collection of fragments of Roman pottery, Saxon remains, and other antiquities, discovered near York, was next visited, and the very fine tesselated pavement, presented by Sir G. Wombwell, Bart., and found at Oulston, was very generally observed. Having concluded a hurried visit to the Museum, the members recrossed the bridge, walked along the city walls, which were examined with interest, through the ancient bar of Micklegate, and thence to Skeldergate ferry. Passing across the Ouse, they entered the Castle-yard, and visited Clifford's Tower, so called after the first governor.

Mr. H. Webster, the deputy-governor of the Castle, gave a sketch of the history of the tower. It was said to have been erected in 1064, by William the Conqueror, and was intended as a fort to protect the city walls. Round the upper portion it was fortified with cannon, which remained until 1654, when the magazine and all its contents were blown up by the soldiery. It was in this tower that, in 1190, no less than 1,500 Jews destroyed themselves, dreading that the persecuting spirit which then animated the public mind against that unhappy people, and which had exhibited itself in most brutal cruelties in the south, would extend towards the northern parts of the kingdom. The Guildhall was the next place visited, and Mr. Roberts, in explanation, stated that it was generally believed the building was of the date of Henry V., but if the windows were to be taken as an original part of it, the hall must have been built at least a reign later, the pillars and roof being still later. The windows had been restored probably about the time of Queen Anne or the early Georges. The west window appeared to belong to the end of the seventeenth century. The party were then conducted to the Mansion House, where the Lord Mayor (Mr. W. F. Clarke) and the Lady Mayoress received them in the state-room. The insignia and the gold and silver plate of the city were exhibited, and examined with interest. Considerable curiosity was felt in the cap of maintenance, presented by King Richard II. to the first Lord Mayor, when he gave to the city its corporate charter. This cap is still worn by the mace-bearer on state occasions. The members of the Association were afterwards entertained by the Lord Mayor, in the Mansion House, at a luncheon, at the conclusion of which Dr. Lee, on behalf of the Society, returned their most respectful and grateful thanks to the Lord Mayor and the Lady Mayoress for the admirable manner in which they had received them. They had done all in their power to show the curiosities of the city, and had provided them also with a most sumptuous and elegant repast. The reception the Society had met with wherever they had gone in Yorkshire had been most satisfactory.

The Lord Mayor, in reply, said it had given his wife and himself great pleasure to receive the Society, his only regret being that the time was so short; and if the Association ever came to York and made that city their head quarters, he was certain the citizens would do all in their power to receive them worthily.

The minster was the last object which the archæologists, as a party, visited. They were courteously received by the Dean (the Hon. and Very Rev. A. Duncombe, D.D.), who had had the crypt specially lighted for the occasion. The Dean himself, some of the vergers, Mr. J. Browne, of York, who is the author of one or two works on the minster, and Mr. Roberts, described the crypt and several of the more interesting objects in the sacred edifice.

CYCLOPIAN REMAINS NEAR ROME.

Among Italian ruins that most strikingly evince how advanced was the civilization crushed and ultimately forgotten under the all-absorbing ascendancy of Rome, the civic fortifications called "Cyclopian" exist in numerous and interesting examples; and railway-travel has now brought within easy reach of the tourist, from that city, several of the finest specimens among those relics of vanished nationalities. Throughout Italy are found at least 300 of such constructions, for the greater part within the Papal, or what (till recent changes) was comprised in the Papal States, namely, in the Sabine, Volscian, Hernician, and Marsian regions; some in the Samnium (now Neapolitan territory), others in Umbria, and some in Sicily, where those of Cefalu are most noted among such remains; but neither in northern Italy nor beyond the Apennines are found any properly belonging to *this* class; for the massive walls of Cortona and Volterra have a different character, and the construction proper to the Etruscan must be distinguished from that understood in the now generally admitted appellation of Cyclopian. This gigantic style of masonry seems to have become domesticated, in ante-historic periods, over a region comprising the mountains of the Sabines, the whole Tiburtine district, and extending north-eastward from Rieti over Umbria; in which last province, however, such walls as are seen at Perugia and Assisi, like those of Fiesole and Cortona, have the character marking the transition period, when the masonry in polygonal blocks gave place to that in regularly hewn and squared stones. In the neighbourhood of Rome the most striking examples of the earlier style are at Alatri, Cora, Segni, Norba, Civitella, Ferentino, Vicovaro, and Palestrina. Those on the mountain-promontory of Circeo (or San Felice), near Terracina, were the first, among such Italian ruins, that received the name "Cyclopian," from their resemblance to the walls of Mycene and Tiryathus in Argolis; and were accidentally discovered, in 1792, by a party engaged in searching for plants to supply the Botanic Gardens at Rome; in consequence of which event, important to archæologic interests, the study and research directed to this range of antiquities received a new impulse in Italy; and in the years ensuing much was accomplished to bring additional light to the subject, by the Archæologic Institute at Rome, by the labours of Dodwell and Gell. The dispute arose whether all these fortifications belonged to the class of monuments referrible to Italy's aborigines, or to those of Rome in her kingly or republican periods; Gerhard and Canina, maintaining the latter theory, were opposed by Raoul Rochette and others. (See the report of this controversy by Cesare Cauter, *Storia Universales*, v. 1, *documenti*) In Gell's "Topography of Rome," and Christian Müller's "Roma Campagna," are described the most curious,—in the former work especially, the features of all such remains within the region contemplated, including those most remote and of difficult access.

A beautifully-varied succession of scenes, the wild and the soft, the mournfully grand and the luxuriantly lovely, the majesty of ruin and richest fertility of nature, are presented to view on the journey between Rome and Ferentino. That city, originally a seat of the Volscians, was given by Roman masters to the Hernicians, and sustained a siege, A.U.C. 457, memorable for the gallant repulse of those ultimately victorious, here as everywhere, 3,000 Roman assailants being left dead under the walls, near a gate still bearing its title, from that day's slaughter, of *Porta Sanguinaria*. Subsequently become a *municipium* and Roman colony, Ferentinum followed the destinies of the conquering metropolis, alike in Republican and Imperial periods, and succumbing to successive irruptions of Goths and Longobards, after the fall of the Empire; finally, in the eighth century, together with other cities of the Roman duchy, submitting by voluntary act to the temporal dominion of the popes. As usual with the provincial towns of these parts, "distance lends enchantment to the view;" and the place that looks imposing on its mountain-ridge above the cultured valley, the "Latium Novum" of antiquity, when seen from below, proves but a gloomy and wild-looking little town as we thread the ways of its steep narrow streets. Its episcopal palace stands on foundations referred by conjecture to the ancient prætorium, or residence of the prefect governing for Rome; and other ruins have been vaguely assumed to be a temple of Mercury, and the Thermæ of Flavia Domitilla. But far more interesting are the extensive fortifications surrounding the greater part of the civic circuit, of considerable height in some places, particularly along the eastern side, but everywhere surmounted by the grey walls of modern houses, that rise at the same perpendicular above. This antique cincture is mostly in regular quadrate blocks, of calcareous stone, fitted together with the utmost exactness, the courses correspondent, though varying in thickness; in some parts the largest stones polygonal, though more frequently squared and disposed with regularity in the successive courses, entirely without cement, as is the case in all such earliest constructions of the Roman

neighbourhoods. The best-preserved portions resemble in style those walls of republican origin at the tabularium on the Capitol; and we were reminded, by this analogy, of the argument sustained by Mommsen to establish that the *greater* number of the mural structures styled Cyclopian, in Latium, Sabina, and Etruria, are not really older than the seventh century of Rome, and to be regarded as restorations effected under her rule. At a short distance from the eastern walls of this town, the road passes an extent of similar building quite isolated, in perfectly regular courses now rising to a height obviously less than was originally presented, for the whole upper part is ruinous; and we might here conjecture the existence of Castra, or some fortified outworks.

We accomplished the journey from Ferentino to Alatri in a fatiguing walk of about three hours, for the most part over rugged mountain paths, but amidst scenery so nobly picturesque that weariness could easily be forgotten; whilst the grand forms of the Volscian and Hernician heights were continually unfolding to view. Amidst this landscape one striking and long-descried object is the conical and sterile mount, rising isolated from the Latian vale, at whose summit is a wild little town with a grove of cypresses, Fumone, celebrated in thirteenth century annals as the scene of the imprisonment and death that closed the strangely-romantic career of the hermit-pope, Celestinus V., confined here, after his abdication of the tiara, by the jealousy of his energetic successor, Boniface VIII.; but, after a few years, canonized by the next occupant of St. Peter's chair, Clement V. We enter Alatri through a narrow modern archway, firmly set into the antique walls extending far on both sides; where at once are recognized the characteristics of the Cyclopian in one of its most perfect and imposing specimens, a spectacle that carries the mind back to those pre-historic days when Palantium and Saturina rose out of primæval forests and deep morasses on the Palatine and Capitol, ages before the city of Romulus had included those mounts within its comparatively modern walls. For almost the entire circuit of Alatri we follow the lines of this extraordinary fortification; and observe with satisfaction that, to all appearances, its majestic ruins have suffered nothing from the demolishing outrage of recent times: surmounted, for the most part, by house-walls or those of convents, built in the same calcareous stone, they stand, in many places, at considerable height, and sometimes free from all superincumbent adjuncts, the measurement of some stone blocks being 6 feet to 7 feet in length by 2 feet to 3 feet in thickness. This stonework is in either regularly-squared or polygonal masses, the latter often dovetailed together with the most careful compactness; and where the interstices are wide, they are filled by small irregular stones, cut apparently only on the outer surface; the strata in some instances correspondent and running in horizontal lines, in others sinking towards the centre, so as to describe a downward curve. At certain points we see cavities, apparently the mouths of secret passages, for purposes of communication or escape; the most conspicuous of these near a gateway, with an orifice narrowing from the summit to the base. But the most important remains are those of the Acropolis, on a spacious platform, high above the level of the town, at whose southern extremity it rises, now occupied only by the cathedral and episcopal palace (insignificant modern buildings); around this elevated ground the steep being supported by buttress walls, in the same stupendous masonry, but more completely preserved than the rest, and on one side advancing in a rampart, detached from the slope, that terminates in an obtuse angle, where 50 and 60 feet of height is obtained by a wall of not more than fifteen stone courses. Near this rampart is a gateway, still entire, under a horizontal arch, the lintel formed by a single stone, perhaps 8 to 9 feet in length; and within the ingress another such horizontal stone forms a roof at somewhat higher level: the jambs, in enormous stone-work, and the passage within, lined by projecting masses, left rough in their unhewn surfaces, as if for incrustation, or in the intent of having this part concealed by other masonry. The grand extent of landscape, the valley of Latium Novum, with its western and eastern mountain limits, commanded from this platform before the cathedral church, might reward for the fatigues of a journey to Alatri, irrespectively of the local antiquities. Nor are these last exclusively of one character, for, strange to say, this remote and little-visited town contains more of the Middle Ages than is discoverable amidst all the grandeurs of Rome. In its narrow streets, through none of which could pass a vehicle, and where are ascents like broken staircases, only to be achieved by a scramble, we now and then see mullioned and transomed windows, of two or three lights, divided by quaint colonnettes, acute-arched doorways, and massive stone facings, that tell a tale of better days, once enjoyed but long lost by these now gloomy abodes. In some churches also remain, amidst paltry modernization, fine examples of the wheel or rose window, and ample arched portal, with clustering pilasters; one in particular, whose exterior seems left untouched, remarkable for the Flamboyant tracery of its rose window over a portal with acute arch, pilasters and mouldings of very rich character—the interior, a poor attempt at Gothic restoration, with a superfluity of tawdry colours, and the worst description of stained glass set in its pointed windows; though original outlines still unaltered, and the peculiar arcades, with cusped arches that divide the nave and aisles, are worthy of notice. As to this church which has also a fine old campanile, with different stories of round-arched and two-lighted windows, divided by graceful colonnettes, we could obtain no history in the town; but, after returning to Rome, could identify it with that briefly noticed in Moroni's "Dictionary of Ecclesiastic Erudition," as the Santo Stefano of Alatri, built in the thirteenth century by one Cardinal Gottifredo, probably the Italian form of a German name.

To inspect another most remarkable monument of Cyclopian construction, we must quit the railway at Velletri, and thence accomplish (by horse or hired vehicle) a journey of some hours across a region, once designated *Volscorum Ager*, where the wide valley is bounded by the Volscian mountains eastward, and though cultivation is not wanting, a character of wild mournfulness distinguishes the scene, habitations being scarcely found, and the sole village passed on this route, San Giuliano, abandoned to gloomy though picturesque decay. Cora is said to owe its name and origin to the Argive Coras, brother of Catillus, thrice mentioned in books vii. and xi. of the "Æneid;" by Cluver is assumed to be one of the cities built by the aborigines and Pelasgi; according to Livy, a Volscian town; but its citizens, the Corani, by Pliny called "Trojans." Historic certainty as to her vicissitudes may be found at least in the account of submission to the Roman power, after having long struggled against it in alliances with the other cities that formed the Latin League, from the year 415 of Rome's era; after which date she continued in peaceful subjection as a *municipium*, mentioned by Strabo among the more considerable towns of Latium. Now a wild, dismal little place, where nothing seems to animate the monotonous gloom of obscure existence, it seemed to us that this town, possessing such treasures of antiquity, surpassed in the degree of squalid and repulsive wretchedness anything we had yet seen (at least among regions so near highways and metropolises), in the experience of not a little Italian travel. Arriving at the foot of the steep height it climbs over and crowns, and quitting the vehicle, which cannot traverse its precipitous, rugged footpaths (rather than streets), we first observed some external walls, and the towers of a gateway in reticulated masonry, antique, though restored in the Middle Ages, and referrible to the later period of Republican Rome. Within this we see, at different levels of the ascent, the remains of the much earlier fortifications, preserved to greater height than are any other similar structures of these Italian cities, and less ruinous than is the condition of most. The first presented to view is the town's lower quarter, an extent of walls in enormous polygonal blocks, here 6 palms in thickness, and stretching 33 palms in length. But, in the higher quarter, are others, assumed, from the still vaster scale and more rudely irregular character of the stonework, here also polygonal, to belong to another cincture of greater antiquity. Gell supposes these fortifications to be undoubtedly Pelasgic; and Müller points out the evidence of different date in the characteristics of their higher and lower portions severally. Here, as at Alatri, the interstices between the enormous masses are, where left wide, filled up by small irregularly shaped stones; and, though far from equalling in extent the Cyclopian walls of the latter city, these of Cora give a still greater idea of power, of the ambition that animated their builders. But the latter place contains ruins of less mysterious antiquity, whose beauty will impress most visitors far more than the stupendous proportions of those aboriginal structures. About half-way up the ascent we find a small church, built in a ruin called popularly "The Palace of Pilate," but in reality a temple of Castor and Pollux, as evident from the names of those deities still distinctly read on frieze and architrave; besides which members of its architecture remain only a Corinthian column and correspondent pilaster, in fluted travertine, belonging (as inferred) to an angle of the pronaos, and even these fragments but imperfectly seen, embedded in modern masonry. At the summit, reached by a fatiguing walk, is that celebrated and exquisite temple of Hercules, deemed a perfect example of the Doric order in its fourth epoch, which was admired by Raffaelle and made the subject of a sketch by him, still extant; by Winckelmann was referred to the period of Tiberius; but by others, who argue, from the archaic character of the inscription over the entrance (see Müller's "Campagna"), placed at date so early as the first Republican period. Of the peristyle still remain eight travertine columns, six (including those at the angles) in front, and two (or four including the latter) at the sides, the upper part, to about two thirds, fluted and clothed with stucco, the lower part of the shafts cut in facets, these supporting a frontispiece, with frieze and architrave still entire, the only ruinous portion in this higher member being the apex of the triangular pediment. The columns have bases (a detail so rarely found in the Early Doric), and this graceful pronaos rests on a high basement of travertine, before which stretches a grassy platform just at the brow of the hill, commanding one of the most extensive and glorious landscapes in Italy,—at least, in Central Italy. Within that peristyle stands the front wall of the cella, and its original doorway with marble jambs, above which runs the inscription. Behind extends a long low church, St. Pietro, on whose walls we see a fragment of the temple cornice, and a beautifully chiselled marble altar serves to support the baptismal font, its four sides adorned with reliefs of rams' heads, festoons of fruit and flowers, and three heads of the sun god encircled by rays,—not identical, but each of finely-characterized features.

THE SHAKSPEARE CELEBRATION.

The central committee are to meet on Monday next, to settle the time for holding a public assembly in London, to inaugurate the movement properly. It is to be hoped that a very early day will be fixed. If the first stone of a monument is to be laid,—as it most certainly should be, on the birthday in April next,—even the nature of which monument is not yet settled, there is not a *moment* to be lost. Artists cannot be appealed to for designs until the probable amount of money available can be mentioned; and a satisfactory design will not be obtained unless plenty of time be given, even if it be then. Unless something really honourable to the art of the country is to be set up, it will be better to do nothing. The committee have the best intentions, but if they lose more time their good intentions will be of no avail.

HOLBORN VALLEY.

Deplorable as is the state of the City thoroughfares, nothing but magniloquent talk of improvements, and invitation of new competitive plans for amendments, has as yet come under public notice; although traffic and intercourse are so blocked and impeded that the passage of heavy vans has been interdicted during business hours, and cabs and omnibuses have been restricted to certain lines on entering the City, and to different routes on their egress. Truly this betokens a desperate struggle, in the last resort, to stem an utter stagnation of trade.

For years has the Corporation been predicating a level causeway over the valley, as they also proposed a continuation of Bridge-street, Blackfriars, to Clerkenwell. The first has come to nothing, and nothing has come of the second, although Mr. Bunning has expended years of his time and all his health in the difficult office of directing surveyor. It would appear that in the variety of interests and multiplicity of counsellors there is no security for progress, and that the commencement of a Holborn viaduct is now as remote as is the completion of Victoria-street.

A plan was proposed some years back in the *Builder*, to give an easement to central traffic by opening out a new route, 60 feet wide, intermediate between Fleet-street and Holborn, commencing at Sir Robert Peel's statue, Cheapside, *slick through* Paternoster-row, Amen-corner, and Stationers' Hall-yard; thence over the space between the Sessions House and the Old Bailey Prison (an interval of 130 feet), across the Old Bailey, and so in continuation by a bridge or viaduct over

Farringdon-street, about the site of the market: from that point the new street was designed to traverse Chancery-lane, the south side of Lincoln's-inn-fields, by Carey-street, &c., &c.

So far as the Old Bailey, that project would well subserve the new scheme of simply bridging over the Holborn difficulty; for in the recently published suggestion by Mr. C. H. Smith, he would commence (as others also had proposed), at the corner of Fetter-lane. Now the enormously increased traffic, as anticipated from the grand junction stations of the Chatham and Dover, *and all the North and South railways*, would be ill provided for, if Newgate-street is to be the issue, as at present, for its continuation: that street, although widened in some parts by 8 feet, would be wholly inadequate to the object, and there is little hope that for years to come the remaining houses will be set back even to that extent.

The line of Holborn from Fetter-lane to Newgate, represents a segment of an arc, the cord whereof would run central between the grand independent route herein recommended and that of Holborn, with its existing vale of obstruction, labour, and woe. Certainly, the short cut, *simply bridging over the valley*, might be effected more speedily, and at less cost; but would it effectuate a permanent and suitable easement for traffic that has increased, is increasing, and that must eventually form a whirlpool of confusion, unless issues be opened sufficient to disgorge the tributes to be poured in from all the united railways?

Projects have been already brought forward of large scope; that exhibited in Guildhall, by Mr. Greenhill, and illustrated in the *Builder*, with others announced, and *in prospectu;* but the first consideration is, whether the change of existing streets, and the demolition of long structural ranges, now in full business and occupation, be at all needed to carry out the required intercommunication, *and to bridge over that difficulty* which has long been the standing disgrace of London and its corporation.

To cut away six houses from the corner of Fetter-lane; to open a space through two or three *culs-de-sac*, such as Thavie's-inn; to abate some impoverished and dilapidated lodging courts in low and sequestered quarters, could not be a very losing speculation; for the wider the scope and the better the allotments set out for rebuilding a grand arterial and central route, the higher would be the ground-rents and returns.

To demolish Holborn alone for 500 yards (on both sides, too) would entail enormous expenses, besides the stagnation and dislocation of trading interests.

Let these alone: a great design may be carried out more simply and effectively in a new direction: the present toilsome thoroughfares may serve whilst the straight and open way is being constructed: science and skill will have fair play, whilst the long located and busy citizens are allowed to stick to their tenures and businesses; and, as it ever happens in improved neighbourhoods, the old-established streets and shops will not only survive the shock, but be benefited by the change.

Were it possible that any plan should be adopted which involves the clearance and reconstruction of entire streets, *such as we have seen*, five years of ruin and stagnation must befal the most vital centre of civic organization. In the animal economy, the loss of an artery is often compensated by enlargement of the venous system: in this wise our lanes and by-ways might relieve congested traffic; but mortification would be sure to follow the too free use of the scalpel.

Eighty-four designs for the improvement of Holborn Hill have been received, and are now hung in the Court of Queen's Bench, Guildhall, for the inspection and consideration of the improvement committee. The committee have commenced work, but nothing is yet determined on.

THE CENSUS OF ENGLAND AND WALES.*

A VERY readable and interesting volume is being prepared by Mr. Coke from the official returns under the care of the Registrar General, Major Graham, to whom, by permission, the volume is dedicated. The part now issued is confined to England proper, and Wales; and in the other two parts, Scotland and Ireland, with the colonies and foreign possessions, will follow.

So recently as the year 1751 the population of all England and Wales was estimated at only about 6½ millions, or not much more than twice the present population of London. In 1801, according to the census of that year, the population of England and Wales was nearly 9 millions; and in another half century it was 18 millions, as shown by the census of 1851. At the census of 1861 it exceeded 20 millions. At this rate, in 1901, it may be expected to be 36 millions, and in still another half-century we—no, not we but our successors—may find it increased to 73 millions, or nearly four times the present number of inhabitants. What sort of provision or means of livelihood there will be for such a multitude in our "tight little island" at that time it is hard to say. On an average 373 persons are at present domiciled on each square mile of surface in England and 150 in Wales; and with the exception of Belgium, with 400 persons to each square mile, England is already one of the most densely peopled countries in the world—China, we should think, specially excepted. Amongst the more western nations, next in density of population are Holland, France, Prussia, Austria, &c. Sweden and Norway are the most thinly peopled countries in Europe; then Russia, Spain, and Turkey. In Middlesex, at the last census, there were 7,852 persons to every square mile of surface; in Lancashire, 1,200; and in Westmoreland only 80. The precise number of the whole population of England and Wales at the date of the census (8th April, 1861) was 20,066,224, of whom 9,776,259 were males, and 10,289,965 females. Thus, there were half a million more females than males, or a female population equal to not very far short of a fourth part of the whole population of London. The proportion to the male population is 105 to 100, or one extra female to every twenty males. That the emigration of more males than females is one cause of this surplusage there can be no doubt; and that the greater exposure to influences injurious to life in the male than in the case of the female also helps is no less evident; but a greater number of males than of females are born,—20 to 19; and that the female is more tenacious of life than the male, at least in infancy, appears from the fact that in the very first year of their lives, when there can be no difference of exposure to injurious influences, 51 boys die for every 49 girls. More women than men, too, live to "a good old age." At 20 the males and females are at about an equality in number, and this is about the pairing time; so that there is a precise equality at about the time when both sexes are marriageable.

Of 684,048 births registered in 1860, 640,355 were born in wedlock, and 43,693 out of wedlock, being about 1 illegitimate for every 15 legitimate births, or 6·4 per cent. In Cumberland the proportion was 12·1 per cent.; in Norfolk it was 10·7; in Westmoreland, 10·6; in Shropshire, 9·6; in Nottinghamshire, 9·1; and in Lancashire, 6·4, the same as the average for England and Wales. The proportion of natural-born children in London for the year 1860, was 4·2 per cent., about 1 in 24, and the same proportion was registered in the extra-Metropolitan parts of Surrey and Middlesex, also in Huntingdonshire and Monmouthshire; in Hampshire, 5·1 per cent.; in Kent, 5·2; in Warwickshire, 5·3; in Durham, Gloucester, and Cornwall, 5·4; in Staffordshire, 6·0, &c. In England, Norway and Sweden, and Belgium, the proportion of illegitimate births is 1 in 15; in France and Prussia, 1 in 14; in Scotland, Denmark, and Hanover, 1 in eleven; and in Austria, 1 in 9. The immense proportion of illegitimate births in Scotland, like its excess in drunkenness, constitutes a very remarkable feature in the statistics of a country with such pretensions to superior religious character: something evidently must be wrong; and its clergy ought to reflect seriously on the probability that it is the very stringency and bigotry of their religious rule itself which yields such unwholesome fruits; for "by their fruits ye shall know them;" and Scotland, the spiritual and moral exemplar to England and the whole empire, as it conceives itself to be, is, *par excellence*, the land of bastardy and drunkenness.

The immensity of London by comparison with other large towns is well shown forth in Mr. Coke's volume by a list of 17 large towns, the population of all of which together falls short of that of London, by 49,121 persons. Nevertheless, this list includes, Liverpool, Manchester, Birmingham, Leeds, Sheffield, Bristol, Wolverhampton, Newcastle-upon-Tyne, Bradford, Salford, Hull, Portsmouth, Brighton, Sunderland, and several others. The population of all these seventeen towns together, in 1861, was 2,754,868, whereas that of London was 2,803,989. The population of Paris, in 1862, was only 1,696,141; that of St. Petersburg, in 1858, was 520,131; that of Berlin, in 1861, was 547,571; that of Vienna, 512,000; and the population of all these three, with that of Brussels, Lisbon, Rome, Turin, and Copenhagen, or eight of the chief continental cities, would not suffice to fill London, their whole population being only 2,559,182.

To supply the people of London with food and drink requires, on an average, 1,206 to support a baker in his business, or 1 baker to 1,206 of the population; 1 butcher in business to 1,553 of the population; 1 fishmonger to 6,801; 1 cheesemonger to 3,291; 1 dairyman to 2,175; 1 greengrocer and fruiterer to 1,541; 1 grocer and teadealer to 1,030; 1 beer and wine retailer to 2,062; and 1 licensed publican to 668 of the population, in proportion 1 publichouse to every 87 inhabited houses.

To supply clothing and dress, it appears from the "London Directory," that 1,064 of the population support a tailor in business, or 1 tailor (not including journeymen) to 1,064 of the population; 1 boot and shoe maker in business to 1,031 of the population; 1 milliner and dressmaker to 2,077; 1 hatter to 6,000; 1 draper to 3,000; 1 hair dresser to 3,738. To alleviate the sufferings and infirmities of human life, we have 1 surgeon or general practitioner to about 1,712 of the population, and 1 physician to 5,552; 1 dentist to 8,247; 1 chemist to 3,505; and for disposing of the dead, 1 undertaker to about 5,043 of the population; and as 24 in 1,000 of the metropolitan population, on an average, die during the year, it will allow 121 to each.

In London there are about 10,000 of the population to 1 pawnbroker; 1 tobacconist to 2,062; 1 watchmaker and jeweller to 3,300; and to support our position, to settle our disputes, to enforce our claims, to adjust our wrongs—our contentions,—and to injure one another as much as the law can do,—we have no less than 1 solicitor to 825 of the population, and 1 barrister to 1,752, or about 1 in 560 of the inhabitants of London belong to the "legal profession," to be found in the "London Directory;" about 1 in 1,120 to the "medical profession," including dentists; and to somewhere about 1 to every 900 of the population there is a "minister of the Gospel."

The greater number of silk-weavers are in Spitalfields, Bethnal-green, and Whitechapel; watchmakers, in Clerkenwell and St. Luke's; Engine and boiler-makers, in Poplar, Stepney, and Lambeth; gunsmiths, in Whitechapel, Stepney, and St. George-in-the-East; sugar-refiners, in Whitechapel and St. George-in-the-East; cabinet and chair makers, in Shoreditch, Bethnal-green, &c.; and tanning, in Bermondsey, &c., &c.

It will be seen from these gleanings, that Mr. Coke's census-book is both curious and interesting: nevertheless, it might have been better arranged.

* "Census of the British Empire, 1861: compiled from the official Returns, in Three Parts. Part I.—England and Wales. By C. A. Coke. Harrison, Pall-mall. 1863."

MURAL ORNAMENTATION OF INTERIORS.

THE example set by the late Lord Herbert, of Lea, in the ornamentation of the church built by him at Wilton, has been followed by another resident in the immediate neighbourhood, Mr. Fane De Salis, of Teffont Manor, having recently embellished Teffont Church, which stands within the precincts of his park, with a work in marble tarsia by the sculptor Baron de Triqueti. Tarsia in marble may be viewed as a new application to mural decoration, of the ancient process of marble *chiar-oscuro:* it recommends itself by its perfect durability and the indestructible character of its colours. The first specimen of this art was sent to this country at the time of the Exhibition of 1862, and was secured for the Kensington Museum: it was, however, limited in size, being composed of single figures: the work in question may therefore be considered as the first example of the resources offered by marble tarsia for the embellishment of churches and public buildings.

The site selected for the tarsia in Teffont Church is the space above the east window in the Manor Chapel, which adjoins the chancel: it consists of marbles of three colours,—statuary marble and grey Sicilian, with a dark-blue marble constituting the background. The figures and drapery represent a choir of angels singing "*Gloria in Excelsis.*" They are grouped around a scroll, on which is engraved, in golden letters, "Hallelujah! Hallelujah!" Our informant says; —"The draperies are simple and well disposed, and the expression of the heads recalls the reverential feeling and devout sentiment which the early Italian masters gave to their works." Designs of the same artist for decorations contemplated in St. Paul's Cathedral have been selected by the committee.

ST. STEPHEN'S, VIENNA: STONE GABLETS ON THE SOUTH SIDE.

ST. STEPHEN'S, VIENNA.

"GOING ALONG."

REFERRING to the Cathedral Church of Vienna, in our notes "Going Along,"* we spoke of the external gablets over the windows of the south side as noticeable specimens of stone tracery. Of these we now give a careful view. Part of the tiling of the roof forms the back-ground. The stonework is remarkably sharp and perfect: to what extent it may have been restored since its original execution, we are not prepared to say.

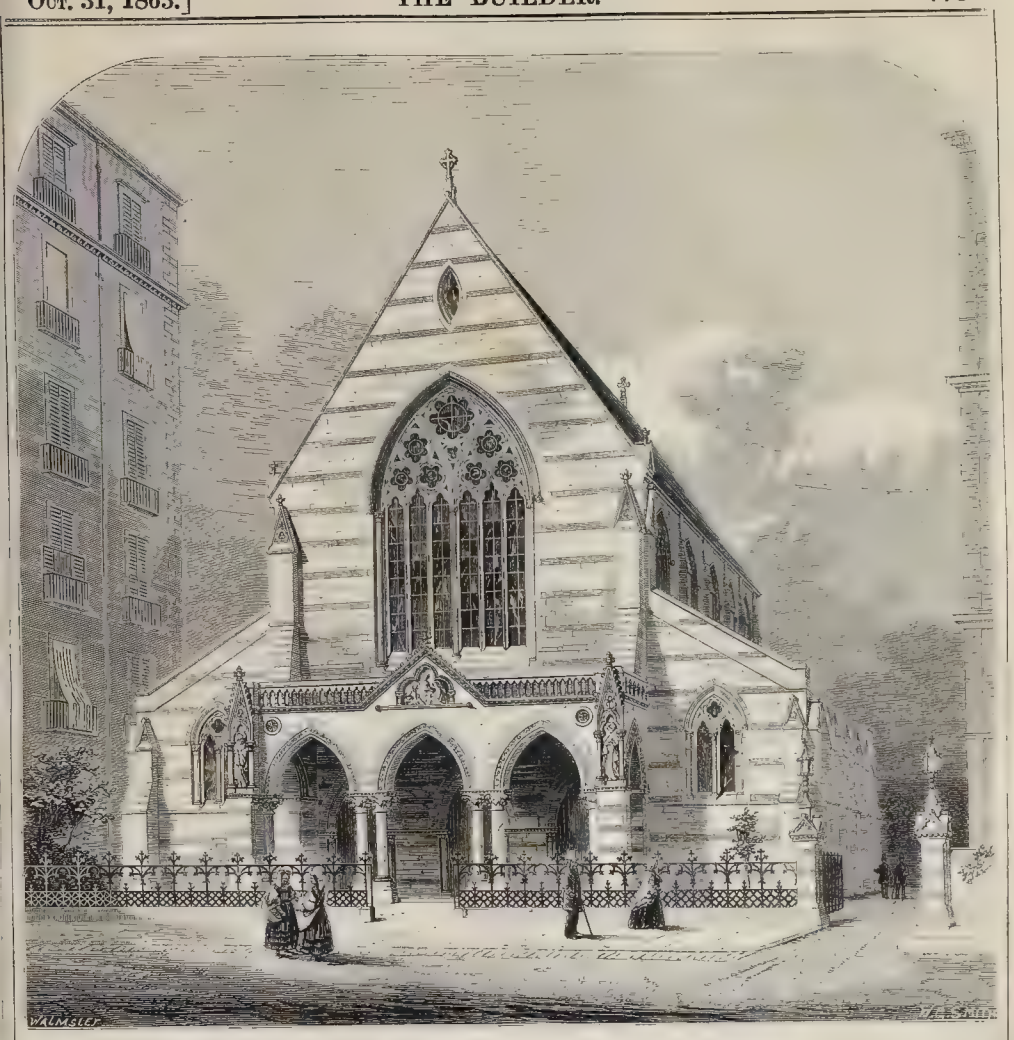
THE CHANCELLOR OF THE EXCHEQUER ON CROCKERYWARE.

AT the laying of the chief stone of the Wedgwood Institute, in Burslem, which has just taken place, Mr. Gladstone read an elaborate paper on Wedgwood and his ware, with which the chancellor has no little practical acquaintance, although he apologised for his "scanty, theoretic, and remote" knowledge on the subject.

"As an observer," he continued, "according to my limited capacity and means, of fictile manufacture in its various branches, I have formed deliberately so very high an estimate of Wedgwood in relation not merely to his particular business, but to the general laws of industrial production, that I am glad to have an opportunity of stating it fully and fairly in order to bring it to trial by the public judgment; and in the office which I hold as a servant of the Crown, and which places me in incessant contact with the industry of the country in its several branches, I am anxious, from the deep interest which I feel in its welfare, to bear my testimony to the principles of which Wedgwood was, so to speak, an apostle; and moreover to give to that testimony any little weight which such an office, and such a deep interest and near relations established by it, may be likely in the absence of higher qualifications to impart."

First of all, however, the Chancellor expatiated *con amore* on the subject of beauty in art; and in doing so he referred to the question (lately alluded to in the *Builder*) whether cheap things should necessarily be ugly; but it may be another question whether his remarks on this point were quite satisfactory, considering that there are so many beautiful forms in existence, the original designers of which have long since passed away, and for whose merits manufacturers are surely not entitled to receive much extra payment, merely because they refrain from selecting ugly designs, and adopt those of more beautiful forms already in existence. Beauty with novelty, designed by living artists, of course comes under another category altogether, and this it was which Mr. Gladstone had more especially in view.

"In the application of beauty to works of utility," he remarked, "the reward is generally distant. A new element of labour is imported into the process of production; and that element, like others, must be paid for. In the modern publication which the firm of Wedgwood & Bentley put forth under the name of a catalogue, but which really contains much sound and useful information on the principles of industrial art, they speak plainly on this subject. They say—'There is another error common with those who are not over well acquainted with the particular difficulties of a given art. They often say that a beautiful object can be manufactured as cheaply as an ugly one. A moment's reflection would undeceive them.' The beautiful object would be dearer than one perfectly bare and bald, not because utility is compromised for the sake of beauty, but because there may be more manual labour, and there must be more thought, in the original design. Therefore the manufacturer, whose daily thought must and ought to be to cheapen his productions, endeavouring to dispense with all that can be spared, is under much temptation to decline letting beauty stand as an item in the account of the cost of production."



Wedgwood's most signal and characteristic merit, he continued, lay in the fineness and fulness of his perception of the true law of what we term industrial art; or, in other words, of the application of the higher art to industry. That truth of art which he saw so clearly, and which lies at the root of excellence, was one of which England has not usually had a perception at all corresponding with her other rare endowments.

The different kinds of ware manufactured by Wedgwood were then brought under separate and special review,—as the cheapest, the intermediate, and the costliest. While speaking of the cheapest, he remarked that,—

"The lower works of Wedgwood are as much distinguished by the fineness and accuracy of the adaptation to their uses as his higher ones by the successful exhibition of the finest art. Take, for instance, his common plates, of the value of a few pence each. They fit one another closely, as the cards in a pack. At least, I for one have never seen any plates that fit like those of Wedgwood, and become one solid mass. This accuracy of form must, I apprehend, render them much more safe in carriage. Of the excellence of their plates we may take it for a proof that they were largely exported to France, if not elsewhere; that they were then printed or painted with buildings or scenes belonging to that country; and then sent out again as national manufactures. Again, take such a jug as he would have manufactured for the garret washband table. I have seen these made apparently of the commonest material used in the trade; but instead of being built up like many more fashionable jugs of modern manufacture, in such a manner that a crane could not get his neck to bend into them, and that the water cannot be poured out of them without risk of straining the wrist, they are constructed in a simple, capacious form of flowing curves, broad at the top, and so poised that a slight movement of the hand discharges the water. A round cheese-holder or dish generally presents in its upper part a flat space surrounded by a curved rim; but a cheese-holder of Wedgwood's will make itself known by this, that the flat is so dead a flat, and its curve so marked and bold a curve, at once furnishing the eye with a line agreeable and well defined, and affording the utmost available space for the cheese. I feel persuaded that a Wiltshire cheese, if it could speak, would declare itself infinitely more comfortable in a dish of Wedgwood's than in any other dish."

The Chancellor's very able paper was wound up with some general remarks on the qualities of Wedgwood's productions and his business. On the subject of colouring and form he particularly dwelt. The lightness of Wedgwood's ware, which is an element not merely of elegance, but of safety; the hardness and durability of the substances; the extraordinary smoothness and softness to the touch of the surfaces; their powers of resisting heat and acids; the immense breadth of the field he covered with the number and variety of his works in point of form, subject, size, and colour; his last, particularly as to his vases,—his title almost to the

* See p. 718, *ante*.

PROTESTANT CHURCH, NAPLES.—*Exterior View.*—Messrs. Thomas Smith & Son, Architects.

paternity of the art of relief in modern earthenware; all these, he remarked, are characteristics which I am satisfied only to name. There are, however, two other points still on my mind—one the general character of his colours, the other his extraordinary merit as a restorer of form in fictile products. The general character of his colour may perhaps be justly described as a strict sobriety imbibed from and closely following the antique. He did not attempt to cover the entire field of porcelain manufacture. That which is perhaps the noblest and most arduous part of all its work—modelling the human form in the solid—he rarely, if, indeed, he ever attempted; and we must not look to him for the gay diversity of its colouring and subjects, or for the particular splendid effects yielded by its deep blue grounds. In no instance known to me does he indulge in showy colours. He has highly glazed vases in admirable taste, but usually, I think, the ground is some variety of green or grey. He could not, however, have been insensible to the attractions of such colouring as was produced at Sèvres or at Chelsea. Where we find a general characteristic running through the works of a man like Wedgwood we may safely assume that there was a reason for it. Probably or possibly the reason for the restraint or sobriety of the colours of Wedgwood is to be found not in mere imitation, but in the classical severity of his forms.

WATER-COLOUR PAINTERS' LANCASHIRE RELIEF FUND.

The following letter, addressed to the Central Relief Committee, gives information which our readers will like to have:—

"We have the honour to inform you that the Committee of this Fund have brought their labours to a termination by the distribution of the collection, consisting of 323 pictures, amongst the shareholders.

The sum the Committee were enabled to raise very inadequately represented the value of the works so generously placed at their disposal for the purpose, the estimated value of the collection being 4,590 guineas, whereas the subscriptions barely exceeded half that amount.

This, although a great advantage to those who had taken shares, was a sad loss to the Charity, and a serious disappointment to the committee. Had the reasonable expectations of the committee been carried out, and shares sold to the value of the collection, they would have been in a position to pay over a sum more worthy of the donors, and of the cause for which they had given their works.

We have, however, the pleasure, after paying all contingent expenses, to forward you a check on Messrs. Ransom & Co. (who kindly undertook the duty of bankers to the Fund) for the balance, 904*l.* 16*s.*, which, together with the two remittances of 500*l.* each, will make a total of 1,904*l.* 16*s.* contributed from this source.

A. Kinnaird, } Treasurers.
Louis Haghs, }
James Fahey, Hon. Sec."

We may add in noticing this satisfactory result of the exertions of Mr. Fahey and others, that that gentleman would be happy to inform any subscriber of the result of his number, if he inclosed a stamped envelope ready addressed to himself; or one of the lists will be sent so long as there are any left, on receipt of three stamps; but as there are no funds for postage he cannot answer letters without. Inasmuch, however, as every prizeholder has been written to, it would seem to be scarcely necessary to trouble the honorary secretary further.

THE CHURCH OF ENGLAND IN NAPLES.

The site in Naples on which the English Protestant Church is being erected, was decreed by Garibaldi in 1860, in words the purport of which we gladly record:—

"Grateful for the powerful and generous sympathy of the English, the Dictator considers it but a slight return for so many benefits received from them in favour of the noble cause of Italy, to decree—Not only is permission granted to build a church on the territory of this capital to men who worship the same God as the Italians; but they are requested to accept, as a national gift, the small space required for the pious object to which they intend to dedicate it.—G. Garibaldi."

We add to the illustrations of the building given in our last* a view of the exterior. The estimated cost of carrying out the complete design of the architects, which includes a tower not shown in the view, is 5,800*l.* In aid of this subscriptions are still being sought, and ought to be forthcoming.

* See p. 756, *ante*.

CHRIST'S HOSPITAL: TOWN OR COUNTRY.

This school, founded erstwhile for a charitable seminary, has now become signalized as one of the best educational establishments of the kingdom. The curriculum adopted there is rather collegiate than suited to children of the poorer classes; and the pupils sent forth annually from its classical forms compete successfully for university honours and preferments. The income of the foundation has enormously increased, amounting from real estate to 60,000*l.* a year, besides the donations subscribed by the annual succession of governors, who contribute 500*l.* each to the school fund. Of these the total number is about 500; and supposing that twenty-five are elected every year, the increase from this source alone would be 12,500*l.* per annum: but as there are always twenty-four aldermen of the number, who, upon their election, become governors *ex officio*, and without contributing anything to the Hospital fund, the increased income from this source may be estimated at 10,000*l.* per annum. In former years the whole government of the institution was arrogated by the City corporation, until the mismanagement became so flagrant that it was delegated to thirty-six almoners, who now rule and regulate the whole system.

Thus the character of the institution is changed. It was at first without the City walls, or comparatively rural: to-day it is in the most central vortex of commerce; occupying at least five acres, between Giltspur-street and King Edward-street, from west to east, and Newgate-street and Smithfield, from south to north. It has been long surrounded by traffic, tumult, and commerce. The noble foundation of St. Bartholomew's Hospital separated it for a long series of years from the wild confusion of the Smithfield Cattle-market, its herds, drovers, and din. Latterly that nuisance was abated; but the ever-swelling intercourse and enterprise of the metropolis now appropriate the whole of the market area, and much beyond it, for railway-stations, meat and other markets, and all the tumult that such great commercial marts are sure to involve.

In a few particulars the Blue Coat School retains its primitive character; the antiquated and absurd costume is preserved—long coats and yellow petticoats, the same in winter as in summer; woollen stockings, also yellow; and *no covering for the head!* Such a garb is altogether unsuited to our variable climate: no parent in these days of improved tailoring and fabric would choose such material, such fashion, or such obstructive impediments to the free action of children and youths. There are certain evidences in the aspect of the pupils which indicate that the free expansion of intellect is as much perverted as the vigorous growth of body; partly from the vesture imposed upon the children, but chiefly from the thick, smoky, and polluted atmosphere which they are compelled to inspire while "in statu pupillari," from year's end to year's end. The first and best authorities of the school have confessed this; but a careful medical inspection would convince all who are concerned for the health and progress of 800 youths—the complement always retained within this greatest civic school; whilst nearly 300 more are at the preparatory establishment in Hertfordshire.

Some years back the writer pressed forward, through the columns of the *Builder*, the project of transferring this great national institution to some country site, convenient (say within ten or twenty miles) to London. Since then, events have occurred which render such change infinitely more desirable and necessary: the metropolis has become larger, the volume of smoke heavier, and the accumulation of traffic more intense and intolerable; and the hospital is exactly concentric with and adjacent to the evils most to be dreaded by all who desire for their sons an abode calculated for bodily health and mental culture.

But if the position has become worse than formerly for continuous residence, the facilities for transfer to some tranquil and genial country retreat are also more obvious; for the value of the site between Newgate-street, St. Bartholomew's, Smithfield, and the Compter, has increased in a fourfold ratio: these grounds and buildings would now realize with facility 300,000*l.* sterling.

With one-sixth of that sum, 500 acres (not too large an area) might be purchased: with 200,000*l.* schools, halls, colleges, infirmary, and private abodes for the masters might be erected; and with the balance, if any were allowed to remain, another 1,000*l.* might be annually added to the already princely revenue of the establishment; but the school already possesses lands at Abbey-wood, near Woolwich, a healthy and elevated spot, quite near enough to the City for the boys to visit the Corporation, and for the aldermen to look after their *protégés* in the classes. The corporation has a heavy stake in the school—each alderman has one presentation every year, and the Lord Mayor two! while every other governor who has paid his 500*l.* has ordinarily only one presentation every third year; and added to their corporate privilege, every alderman is entitled to introduce a friend as governor, upon payment of 200*l.* only!

The question of removal was mooted about five or six years back, and had a large share of support, more particularly from the masters and those best able to judge of its expediency; but it was lost by a small majority: were it now tried under the more favourable existing circumstances, and under the strong public feeling of its necessity and expediency, there is little doubt but it must be decreed.

It would be idle to suppose that this immense institution, which educates, clothes, boards, and lodges nearly 1,200 boys, is an eleemosynary school: far from it—the value of a presentation is a thing as well known and appreciated as an advowson, commission, or other elective advantage: the tutelage, clothing, and support of a son, and these on the first scale of modern culture, are cheap at 300*l.*, *and that is the assessed value*—not a bad return for 500*l.*, if a presentation be available even every third year.

If these be facts, where is the difficulty in removing the whole to Kent, Surrey, Herts, or even to a high district of Middlesex? Perhaps no more than in the location of the razed hospital of St. Thomas. But there ever will be a conflict where the governors are so numerous, and the interests so opposed. A noble collegiate school, such as does not exist in England, might be the result. There youths, destined for universities and professions, might study in quietude, and enjoy relaxation and health in academic groves; whilst others, destined for the more practical walks of life, would have opportunities in discursive exercise and sports (*within bounds*) to lay the foundations of a robust constitution, with the additional advantage (if thought desirable by the rulers) of agricultural experience and improvements.

Possibly the garb of Edward VI.'s school may have a degree of sanctity attached to its cut and colours: if so, surely the Board of Governors might take into consideration the propriety of permitting the use of the now established *crinoline*, in conjunction with the yellow petticoat, for the freer use of the limbs, and at the same time the adoption of the feminine parasol, to guard the cropped boys from rain or sunstroke. This may be considered "badinage," but these points of objection are universally made by all the beholders of the games, as practised behind the Newgate-street railings. We have long left off bob-wigs, hair-powder, and slashed doublets: it is time that a garb, or uniform, and management, suited to the tastes and habits of the day, be adopted for so important and numerous a body of youths as are thus crowded together in the heart's core of the metropolis.

Quondam.

THE PROPOSED RESTORATION OF ST. BARTHOLOMEW'S-THE-GREAT, SMITHFIELD.

We regret to notice that, notwithstanding the influential meeting which was lately held for the purpose of effecting the restoration of this time-honoured structure, the subscription-list continues to fill up slowly. The last announcement shows a sum under 1,500*l.*, whereas the sum required before the work can be commenced is 4,000*l.* As our readers know, this parish is of very small extent, and not remarkable for its wealth. Notwithstanding, a goodly sum has been raised in the locality: for instance, the rector and one of the churchwardens have each subscribed two hundred guineas; Bartholomew's Hospital contributes liberally; and other persons in the neighbourhood have offered valuable pecuniary aid.

It is clear, however, that this desirable work will not be effected without the assistance of a general subscription; and really, when we consider that this is the most extensive and perfect Norman building (always excepting the chapel in the White Tower) which is left in the metropolis, it seems extraordinary that the sum required was not at once forthcoming. The church is within the City precincts, that place of marvellous and untold wealth; and the building, from its historical and architectural interest, claims to be considered as a kind of property which requires the public support. It is a venerable land-mark, which was completed about seven hundred and forty years ago; and the chief part that remains is coeval with the naves of Durham, Peterborough, and Norwich cathedrals. What changes in London city have taken place since that time; and how little we have remaining of those structures which were standing at the time Prior Rahere completed his building for the Black Canons regular of St. Augustin! Even as regards this church, the nave, which was built in the thirteenth century, and other parts of the once extensive monastery, cloister, &c., erected from time to time, have nearly all perished, and are no longer present to the view. The most ancient part, fortunately, still exists, though greatly disfigured, and in some parts requiring immediate attention. The walls are mouldering with damp in consequence of the want of proper drainage: the original pavement is covered to a considerable depth; and the present appearance of the east end of the choir is perhaps the most extraordinary instance of ugliness which is to be met with in town or country, and that is saying a great deal: but for the sum of 4,000*l.* we could have the floor lowered and completely repaired; the present entrances reconstructed; the church drained, warmed, and re-seated throughout; the vestry and west gallery also reconstructed; the earth, which has been collected during many centuries, removed from the walls; the foundations of the four great piers and the north wall of the aisle made good; the stonework and monuments generally repaired; the clerestory windows filled in with tracery; the complete restoration of the apse, with triforium, clerestory, and roofs thereto: in fact, for 2,500*l.* in addition to the sum already subscribed, the interior of this church could be restored to its original appearance, and made so substantial that it would be in a condition to brave the ravages of time for ages yet to come.

In few second-rate provincial towns would a building of interest be allowed to remain in the state of St. Bartholomew's-the-Great, when it could be put in condition on such easy terms. It is a part of London's history, and makes a claim on all London.

THE SANITARY STATE OF BELFAST.

The local authorities are bestirring themselves towards putting the town in a better sanitary state; but it is evident that there is far too much to do for the present epidemic to be materially affected by the more immediate procedure. The owners of the marsh called the Plains, where the fever prevails, have received notice to drain the ground forthwith. Want of drainage and imperfect drainage in whole districts now covered with houses are serious causes of evil, and the Town Council are blamed for allowing such a state of affairs to exist. The chairman of the Local Union, who is also a town councillor, defends the Council on the other hand, and says they have no power to order the drainage of new streets. Some of these are said to have remained undrained and unpaved for fourteen years, and others are spoken of which disembogue their sewage into an open field. The state of the graveyards in Belfast is very bad, not so much from the way in which they are kept as from their restricted limits and the impossibility of decent burial. The Friars' Bush burying-ground contains two great mounds, or conical heaps, in which the poor are buried by scores; and the gravedigger declares that more than twice the population of all Belfast have been buried in these two mounds. The police authorities are compelling house-owners to abate nuisances in neighbourhoods where fever still rages.

SANITARY MATTERS.

Salford.—A special meeting of the Salford town council has been held to consider the report of their drainage committee. The report suggested a scheme to prevent the drainage of the sewage into the river, including the erection of tanks near Mode Wheel for the deodorization of the sewage for agricultural purposes. The estimated cost of the work was 60,000*l.*, for which 18 miles and 310 yards of sewers would be made. The report of the borough surveyor, Mr. S. C. Trapp, was appended, giving the details of the mode by which the scheme could be carried out. Mr. Chadwick said the making of deep drains in Leicester had reduced the rate of mortality to 23 in the 1,000. Such a result might be expected to follow in Salford, where the rate of mortality was 33 in the 1,000, a higher rate than any other town in the kingdom. If the rate of mortality were only reduced to 25 in the 1,000, there would

e a saving of 700 lives a year, and of an expendi-ure of 14,000*l.* for funerals and medical attend-nce. After some discussion, and rejection of an mendment to the resolution to adopt the report, he resolution was finally carried.

Hanley.—In the town council it was recently roposed, "That a committee be appointed with owers to provide or lay down a plan for the eneral sewerage of the borough, and to report on he best means of carrying it into effect." In upport of the resolution, Councillor Bradford aid it was a lamentable fact that the mortality n Hanley during the last twelve months had in-reased 25 per cent.,—that is to say, from 20 per housand to 28 per thousand. That the sewage of a town did materially affect the general health of the inhabitants was evident from the fact that before the sewerage of Ely the city was one of the unhealthiest places in the country, the mortality being 40 per thousand, but since then the average had fallen to 16 per thousand. There could be no doubt that, sooner or later, accumulations of offensive matter and smells inevitably produced fever; and it would be great folly to put this work off until cholera or malignant fever made its appearance, when it would probably have to be done in a great hurry. An amendment was proposed, but the original motion was adopted by a majority of fifteen to six.

Cumberland.—Under the head of "Health Reform in Cumberland," the *Carlisle Journal* states that a medical inspector from the Privy Council is expected to visit Cumberland next year, to inquire thoroughly into the state of vaccination and of the sanitary condition of various places in the county. The state of Whitehaven, Cockermouth, and Keswick, as was to be expected of the vigilant Privy Council, has of course led to this determination.

THE ARCHITECTURAL ASSOCIATION.

At the opening *conversaziones* to be held this (Friday) evening, the President will deliver an address. The list of papers announced runs as follows:—Nov. 13th, on "Dwellings for the Poor," by Mr. Darbyshire; Nov. 27th, Reports: Discussion on Reports and Architectural Alliance; Dec. 11th, Prize Essay on Vaulting and Groining will be read. 1864, Jan. 7th, on "The Metropolitan Building Act," by Mr. Charles J. Adams; Jan. 22nd, on "Greek Architecture," by Mr. Penrose; Feb. 5th on "French Architecture down to the Renaissance," by Mr. T. Hayter Lewis; Feb. 19th, on "Figure Drawing," by Mr. E. J. Tarver; March 5th, on "Parallelisms between Early-Pointed Architecture in England and France," by Mr. G. G. Scott; March 19th, on "Romanesque," by Mr. G. J. Wigley; April 2nd, on "The Church of St. Mary Maxey, Northamptonshire," by Mr. G. T. Molecey; April 16th, on "Modern Development of Mediæval Art," by Mr. Burges; April 30th, on "English Architecture from the Accession of Henry VIII.," by Mr. Wyatt Papworth; May 28th, on "Metropolitan Improvements," by Mr. J. W. Penfold; June 11th, on "Westminster Abbey," by Mr. Lacy W. Ridge.*

SCHOOLS OF ART.

The Nottingham School and the Duke of Newcastle.—The chief stone of the new building for this school has been laid by the Duke of Newcastle, with masonic ceremonial. Previously to laying the stone, the duke delivered an address to those present, in which he said:—"I believe if the term school of art is to be quite appropriate, we ought to add the arts of invention and of emulation, which are practised and pursued with a view to the enlightenment and the pleasure of the mind through the medium of the eye. And, accepted in this form, perhaps the term school of art is the best and most appropriate term that can be used. In the course of these twenty years, although under different names and managements, their objects have been the same, and in principle they have been the same. These schools, at the time of the Great Exhibition of 1851, were only nineteen in number. At the present moment there are ninety, and the number of pupils who are either directly or indirectly receiving instruction through their instrumentality amounts to upwards of 70,000. If I am asked 'What good have they done?' I will not go to local evidence, not even to English evidence, but I will ask you to read the reports of the most intelligent and able Frenchmen who took an interest in the Great Exhibition of last year, who speak in the highest possible terms of the advantages of these schools. Those learned and enlightened Frenchmen go so far as to say that they tremble for the future pre-eminence of France, so far as regards the art of design; because in these two decades of time—the ten years before the first Exhibition, and the subsequent ten years before the second—the English manufacturer has made enormous progress, and this progress they attribute entirely to the enlightened teaching of these schools. I read the excellent speech recently made by Lord Stanley on schools of art. His lordship commented with great, and in many cases with just, severity on the state of architecture in our towns. Had he visited Nottingham, I think he would have been inclined to modify his censure, so far at least as this town is concerned; for there has been the greatest progress in architecture of all kinds—in mills, and warehouses, and dwelling-houses, and public buildings, which in almost every street are showing a most remarkable improvement in the way of taste. Do I attribute this to these schools? Yes, I do. I know that many of the best architects in the town are of such an age that they cannot have studied in these schools. I do not believe that even the younger men—such as the able architect of this building—have had this opportunity; but I think it tells on the architects of this town, upon the manufacturers, upon the masters. They want enlightening—they want to be taught art just as much as the operatives; and they have, by a desire to instruct the mass, obtained the advantages of a knowledge of the style of art, greatly improved their taste, and are no longer content with those hideous masses of brick and mortar with which the streets were formerly disfigured."

The building is already well up. The site is a favourable one at the junction of Peel-street and Waverley-street, adjoining the Arboretum, and opposite the General Cemetery. The building fronts Waverley-street, and stands back from the line of the street about 50 feet. It consists, looking at its broad features, of a principal building, two stories high, in the front, with buildings in the rear, of one story high. In the front of the principal façade, and forming part of it, is designed a square tower, 120 feet high to the top of the vane. The tower forms a porch on the ground-floor, and an open *loggia* on the first-floor. It has a domed roof with a clock dial in each face. The tower projects 12 feet from the line of the façade. The angles are rusticated, and the openings in the ground and first floor have semi-circular arches springing from polished granite columns with carved capitals. The upper portion of the tower, which rises above the roof of the main building, has pilasters with carved capitals at the angles. The dome which roofs in the tower is to be surmounted with a cupola, which is itself to be surmounted with an ornamental vane. The dome will be covered with Minton's encaustic glazed tiles, of various patterns, in bright colours. The principal façade is pierced with six semicircular-headed windows, three at each side of the tower. The sides are in keeping with the front, all having windows on the ground-floor, and arcading on the upper story. Carving of a conventional character will be freely introduced throughout, and the entrance into the main building will be approached by a flight of solid Yorkshire stone steps. The rear building contains the modelling-room, which is 23 feet 8 inches by 17 feet; the master's room, with store-rooms attached; the female students' room, 40 feet by 29 feet; the elementary students' room, of a similar size; and the advanced pupils' room, or painting-room, 69 feet by 24 feet. On the first floor of the front building, and immediately over the library, entrance-hall, and other rooms, is the exhibition-room. This is 77 feet 6 inches in length, by 30 feet wide. The whole of the buildings, with the exception of the curator's rooms, will be heated with hot water and steam pipes. The offices and one-story building are faced with Diseworth white brick, with stone cornices, balustrading, coping, and finials. The walls of the front building are 3 feet 6 inches thick. It stands on a basement of rock-faced Bulwell stone, finished with a moulded plinth cornice. The building is faced all round with wrought Hollington stone. The fence-wall to Waverley-street will be built of rock-faced Bulwell stone, having a tooled Derbyshire coping, upon which will be fixed ornamental iron standards and ornamental wrought-iron railings. There will be two pairs of ornamental gates, one at the corner of Peel-street and Waverley-street, and the other in Waverley-street near the Arboretum. The building is in all its features of the Venetian school of Italian architecture. The front elevation is 88 feet in width, and 51 feet in height, to the top of the parapet. Mr. F. Bakewell, of Nottingham, is the architect. The cost will be about 5,000*l.*

The Southampton School.—The annual examination of this school, in drawing, held by the Department of Art (open to all candidates, whether students of the school or unconnected with it), has just been held. The examination for prizes is of two grades; but as the rewards in the first or lower grade are, by a recent regulation of the Department of Art, strictly confined to children of "poor" schools, several educational establishments that have hitherto sent candidates for the first grade prizes, were not represented on the present occasion. The number of papers taken was 284, and they were equally divided between the two grades. The examination was conducted by Mr. S. A. Hart, R. A., the professor of painting at the Royal Academy, assisted by Mr. Baker, the head master of the school. After Mr. Hart had disposed of all the candidates for prizes, he proceeded to critically examine the thirty-five works executed by students of the school, in competition for the medals of the Department. Nineteen medals and four "honourable mentions" were awarded. Five of the best works were selected by the examiner for the competition in London, in the spring of 1864, for national medallions.

NEWS FROM SCOTLAND.

Glasgow.—A public meeting of noblemen and gentlemen, including merchants, bankers, and other citizens of Glasgow, has been held in this city to consider the propriety of here erecting a monument to Lord Clyde. Lord Belhaven opened the proceedings, and appropriate resolutions were unanimously passed in favour of the object in view, and a committee appointed to collect subscriptions and decide as to the form and position of the monument, and the artist to be employed.

Stirling.—A correspondent of the *Scotsman* says—"The contractor for the Wallace Monument has renounced his contract, and the original fund has been expended; but there is not a shadow of doubt that the monumental fabric will be completed. The public seem unaware that besides a large guarantee, six or eight opulent gentlemen, members of committee, consented, prior to the laying of the foundation-stone, to see the work fully executed."

Paisley.—It has been resolved at a meeting of Lord Clyde's townsmen of Paisley, in the local Council Chambers, that a memorial bust of his lordship shall be purchased for the town; and a duplicate of a bust by Mr. Ewing, presented to the City of Glasgow by Mr. Dalglish, has been chosen.

Milnathort (Kinross-shire).—A number of years ago a Mr. Brand, a merchant in Milnathort, who had realized a competency in this his native town, expressed his intention to appropriate a part of his fortune towards the erection of a school there; but having died before effecting his purpose, his son has given the sum of 1,000*l.* for the construction of the buildings. These have been erected from the plans of Messrs. Peddie & Kinnear, architects, Edinburgh. They are now completed and opened. The school-room measures about 50 feet long by 20 feet broad, having a class-room adjoining, 18 feet by 15 feet: this class-room is lighted by a two-light window at back. The house, which is attached to the west end of the school, is of two stories. The architecture of the building is of the early Decorated Gothic. The site is a little out of the town, on the west side. The principal elevation faces the south, and has three large two-light windows, with gablets over them. These windows light the school-room. The east gable is also pierced by a traceried window, having a belfry on the gable above. The roof of the school-room is surmounted by a ventilator placed in the centre of the school-room. The ridges of the house and school-room have ornamental ridge cresting. The builder was Mr. B. Symon; the wright, Mr. J. Kinloch; the slater, Mr. A. Brand; the plumbers, Messrs. J. Smeallis & Son; and the plasterer, Mr. J. Littlejohn.

* "Prizes will be given for the best essay on 'Iron as applied in Architecture,' and for the best and second best series of sketches contributed to the Class of Design.

A prize in books, value 5*l.*, will be given by Mr. W. Tite, M.P., for the best design for a 'Metropolitan Police Court,' on ground 100 feet square.

The essays and the drawings for Mr. Tite's prize, to be sent in to the honorary secretary on or before August 31, 1864.

A prize of 25*l.* and the Society's Medal have been offered by the Society of Arts to the members of the Architectural Association for the most approved designs for cottages for the labouring classes.

The drawings are to be sent in to the Society's House, John-street, Adelphi, not later than the 1st of January, 1864."

Dundee.—The new Sheriff Court House has been opened for the transaction of Court business. The acoustic properties of the building, according to the *Warder*, are all that could be desired, both for audience, judge, and jury.

Broughty Ferry (near Dundee).—The promoters of a new Congregational chapel having had submitted to them plans and estimates for the building, and these being satisfactory, and within the sum contemplated by the committee, the lowest offers were accepted, and instructions given to commence the work forthwith. The chapel will occupy a site on the north side of Brook-street, a little westward of the infant school. The building will be about 67 feet long and 40 feet wide. The end facing Brook-street will be of an ornamental character. The edifice will be in the Gothic style, divided into three divisions by buttresses and pinnacles, two of which rise to a height of 45 feet. The chief feature is a large central window, 20 feet in height, filled with tracery work. Beneath this window is the doorway, which projects forward, and is surmounted by a small gable, filled in with open tracery. In the side divisions of the front are slender windows, which will light the stairs to the gallery. The front is crowned by a carved open parapet, and the apex finished by a carved cross, at a height of 50 feet from the ground. Internally the church is to be simply finished. The roof will be partly open. The total cost will be under 1,000*l.* The plans are by Mr. James Maclaren, Dundee; and the contractors are, for mason's work, Mr. W. Gibson; carpenter's work, Messrs. Paton & Fairweather; slater's, Mr. Crabbe; plumber's, Mr. Urquhart; and plasterer's, Mr. J. Adam.

PROVINCIAL NEWS.

Milford Haven.—Extensive docks are about to be undertaken at Milford Haven by an influential company. The London and North-Western Railway Company are expected to further the works, and to assist in the completion of a direct railway between Milford Haven and Manchester.

Liverpool.—It has been agreed to accept the tender of Messrs. T. Haigh & Co. for the joiners' work, &c., at the new municipal offices, at the sum of 9,600*l.* In reference to this subject, Mr. Alderman Stewart said that invitations to tender had been sent out to those master builders,—especially those master carpenters and joiners—upon whom it was known that dependence could be placed; and tenders had been received from five of the six persons to whom these invitations had been sent. There had been but little difference between them; and that of Messrs. Haigh, being the lowest, was recommended to the council for acceptance.

Derby.—The erection of the new market-hall and fish-market has been actively commenced by Mr. C. Humphreys, the contractor for the builder's work. The designs, &c., are being carried out by the borough surveyor (Mr. T. C. Thorburn, C.E.), who prepared them. Mr. James Haywood, jun., of the Phœnix Foundry, is the contractor for the iron work. Mr. G. Thompson has been appointed clerk of the works, and Mr. Green is the builder's foreman. The works are to be completed in twelve months from the commencement.

Gorton.—The first portion of the Roman Catholic monastery of the Franciscan Fathers, at Gorton, near Manchester, was opened for divine service, as a temporary church, on Sunday, the 4th inst. The building will afterwards be divided for permanent use, into the entrance-hall, library, refectory, and chief staircase. This is at present open to the roof, but will afterwards be formed on first and second floors into dormitories. The length of the present building is over 100 feet, and the breadth is about 35 feet; the height to ridge about 50 feet. The front facing the high road presents a lofty gable end, which eventually will become the centre of the front of the monastery, and the chief entrance. Exteriorly the building is of red brick. The stone used is from Lymm Quarries. Owing to want of funds it has been used sparingly, and this only in the front elevation, being almost entirely dispensed with in the side elevation, which will become sides of the quadrangles. The means at the architect's disposal have not allowed for any expensive details: neither would it, if practicable, have been in accordance with the style of houses erected by the Franciscan order. The front entrance in the centre gable is formed by splayed and deeply-recessed jambs in brick, with outer pointed arch of stone, flat segmental door-head, and the tympanum formed by the pointed arch above is of Caen stone, carved with badge of the order. A large cusped circular window occupies the pediment of the gable, on the apex of which is a large cross in wrought-iron. In this front the stone cills are continued as bands, having a course of blue brick under. The staircase window has mullions of brick, as also have the cloister windows: these are filled with green glass in quarries. All the other windows are ordinary sash windows in plate-glass. The jambs are of chamfered brick, with, segmental arches of same, with alternate voussoirs of square brick. The building was commenced in June last: it has been designed and carried out under the superintendence of Mr. E. Welby Pugin. The remainder of the edifice will be gradually erected, as available funds can be obtained. When completed it will comprise all the offices appertaining to a large and important monastic establishment, as well as a large church, for the use of the community and the inhabitants of the parish.

Bridlington Quay (Yorkshire).—The Bridlington Local Board of Health have given notice to the inhabitants of their intention to make application to one of her Majesty's principal Secretaries of State, for making certain improvements and alterations at Bridlington Quay. The Board have already engaged the services of Mr. Ashdown, of London, architect, to prepare plans for carrying out the contemplated improvements. The present scheme is, we are told, to pull down a number of old buildings, which have long disgraced the town, to build a sea wall from the pier, and have a carriage-drive from Garrison-street along the cliff to the sea wall erected by Mr. Makings, and a promenade along the side of it.

CHURCH BUILDING NEWS.

Woolley (Hunts).—The chancel of Woolley Church has for some time past exhibited signs of sinking owing to the defective foundations, or, in point of fact, *want* of foundations; for, though the chancel was rebuilt in 1857, it was found, on examination, that the walls were only a few inches under ground. New foundations to a depth of 3 feet 6 inches have been put in by underpinning the walls. It is stated that the tower and spire are in a very insecure condition, and the whole of the church is much dilapidated. The repairs have been carried out by Mr. Bird, of Huntingdon, builder, under the superintendence of Mr. John Ladds, architect.

Thetford.—The new Union-house Chapel has been opened. It has been erected entirely by voluntary subscription. The foundation stone was laid on the 11th of June last, by the Hon. Lady Walsingham. The chapel is situate on the north side of the Union House. Its style is Early Decorated. The design for the building was given, we believe, by the Hon. and Rev. Augustus Sutton, of Tofts, in this county. The builder was Mr. John Palmer, and the fittings of the interior were done by Mr. Scott, of Tofts. The floor is of a mixed coloured pavement, and at the south end is a stained glass window, representing the four evangelists.

Brighton.—Union-street Chapel has been re-opened for service, after having been closed for repairs and alterations for three months. The chapel is in form something like a theatre. The ground floor rises from the centre, or, rather, falls from the entrances to the centre (for this portion was below the level of the entrances). This has been lessened by raising the pit 1 foot. The galleries, which are very large and heavy, supported by heavy columns, have been raised at the back 3 feet, and the whole of the pewing, both on the ground floor and galleries, cleared away, and open bench seats fixed. Above the galleries, and supported again by heavy columns, is a large dome, having a lantern light at the top. This lantern has been shut out from view by a ceiling of glass; the ribs of the dome being carried across: from this is suspended a large sun-light of sixty-three burners. Some marble veining of columns has been done by Mr. Sendall, jun., of the firm of Messrs. Sendall & Son. The contractors for the alterations were Messrs. Cheesman & Co., and the work has been designed by, and carried out under the superintendence of, Mr. H. N. Goulty, architect, Brighton.

Winchester.—Some time since an offer was made by means of an anonymous letter to the trustees of St. Cross Hospital, of a donation of 500*l.* towards defraying the expense of a complete restoration of the choir and chancel of the church of this charitable foundation. The sum of 500*l.* has been paid by "O. Z." into bank, to the credit of the trustees. "O. Z.'s" intention of having the choir completely restored will be now carried out by the trustees, who, with a view of such work being properly done, has placed it in the hands of Mr. Butterfield, architect.

Wear Gifford (Devon).—The church of this place has been re-opened, after reseating and other works of repair. The curious tie-beam roof of the chancel has been repaired, and newly raftered, and the roof newly covered with slate. The old bench ends that had been laid aside have been repaired and refitted, and the church generally reseated in red deal, the chancel seats, pulpit, and desk being of oak. The sacrarium and chancel are laid with Maw's tiles, and a new rail and standards fitted up. A new vestry has been built, and two ancient effigies placed in recesses. The work has been done by Mr. Bale, of Bideford, builder, under the superintendence of Mr. Ashworth, of Exeter, architect.

St. David's.—We may mention in reference to the proposed restoration of St. David's Cathedral already noticed, that Mr. Scott's report on the state of the fabric, presented last year to the Dean and Chapter, recommends its restoration in keeping with the original design, which he estimates may be done at a cost of from 27,500*l.* to 30,000*l.*, "according to the mode of carrying out certain parts of the work which have been left open to consideration."

Manchester.—The church of SS. Simon and Jude, Granby-row, Manchester, has just been rearranged and refitted. The first thing was to make a better arrangement of the "east end" (speaking as if the church orientated correctly). The first bay of the nave is arranged as a chorus cantorum, with two rows of benches on each side, placed stall-wise; two stalls for the clergy being formed at the "west" end of these seats. As the nave is very broad it admits of "north" and "south" aisles to the quasi-chancel, from which they are divided by a panelled and arcaded screen. One of these chancel aisles is filled with benches for the use of the congregation; and the other contains the organ, and serves as a choir vestry. The chorus cantorum rises one step from the nave, and the sanctuary two steps more; and the altar stands on a foot-pace. The sanctuary has been made deeper, and a straight rail put across, sustained by moulded standards. A credence niche has been formed on the "north" side, and on the "south" are two-seated sedilia of wood. The chancel window, as it is to the *south*, admits the direct rays of the sun to an unpleasant extent. To obviate this disadvantage, Mr. Edmundson is preparing a painted window, which is purposely more cool in tone than usual. The chancel and sanctuary floors are to be laid with Minton's tiles, those within the rails being encaustic. The nave seats, besides being cut down to a suitable height, have been widened. The pitch of the gallery has been lowered, and the seats altered, similarly to those below. The gallery front has been cut down to a moderate height, and the upper part is pierced with quatrefoils, and otherwise relieved. These alterations have been carried out by the builders, Messrs. Shackrah & Peirce, of Stockport, under the direction of Mr. J. M. Taylor, of Manchester, architect.

SCHOOL-BUILDING NEWS.

Cavendish (Suffolk).—New national schools have been opened here. Mr. Stammers, of Cavendish, was the builder; and the architect was Mr. Johnson, of Bury St. Edmund's. The building, which stands on the village green, consists of a school-room, 54 feet by 18 feet, flanked on one side by a class-room, 15 feet by 14 feet, and on the other by the schoolmistress's residence, with two porches and a bell turret. The whole is built of red brick, and slated.

Loughton.—The National Schools just completed from the designs of Mr. T. H. Watson, London, were opened on the 16th ult. Mr. C. W. Wiggs, of Waltham Abbey, was the builder. In the absence of the Bishop of Rochester and Archdeacon Mildmay, the chair was taken by the rector, the Rev. John W. Maitland, who read the service. The exterior is ornamental, and the timber roofing to the several rooms in the interior is open.

Lowestoft.—A congregational school-room has been opened here. The architect was Mr. W. O. Chambers, and the cost, including gas-fittings and benches (which consist of ornamental iron standards in French grey, and imitation oak stained wood rails), about 350*l.*

Wormley (Herts).—The Bishop of Rochester has opened the new parish schools at Wormley. The schools are built to accommodate 120 children, from a design by Mr. Joseph Clarke, diocesan architect; and at a cost of 850*l.*

Kidderminster.—Tenders for the erection of the new lecture and school-rooms, in connexion with

the Old Meeting-house here, have been sent in. The successful tender was that of Messrs. Wilkinson, of Derby, for 1,175*l.* To this has to be added 40*l.*, making a total of 1,215*l.* There was a difference of 500*l.* between the highest and the lowest (the accepted one). The building is to be erected in four months.

Stoke Gifford.—A national school building has been opened at Stoke Gifford by the Duchess of Beaufort. The edifice has been between one and two years in course of erection, and it was constructed from the plans of Mr. Tate, of Badminton, at a cost of between 700*l.* and 800*l.* There are two rooms in the school-house, one of which will be used for the general purposes of instruction, and the other as a class-room.

West Harnham.—The new school, recently erected at the junction of the Netherhampton and West Harnham roads, has been opened. It stands in the centre of a piece of ground, about a quarter of an acre, presented to the parish by the late Earl of Pembroke. The building itself is in the Early Decorated style of architecture, and has been designed and carried out under the superintendence of Mr. Clark, of Salisbury, architect. It is built of Bath stone, and covered with slate. The structure consists of a school-room, about 28 feet by 18 feet, and a residence for a mistress attached. The building has been erected by Mr. Bull, of Southampton, and the carving has been executed by Mr. Kemm, of Salisbury. The cost has been about 380*l.*

Newcastle-under-Line.—The new schools in connexion with the Wesleyan Chapel, Newcastle, have been completed. They are 80 feet long by 44 feet wide, and 15 feet to the eaves, whence the ceiling rises nearly to the ridge. The roof is of one span, and strengthened with a network of rod iron. The building is heated by Redfern's hot-air apparatus, and lighted with gas. The floor is boarded throughout. The building was designed by Mr. Roberts, of Trentham, and has been executed by Mr. T. Lowe and Mr. W. Pratt.

Derby.—The schools of St. Andrew's Church, London-road, Derby, have been opened. The building, which is of a sober ecclesiastical character, occupies a site on the London-road (towards the purchase of which Mr. Barton Borough gives the sum of 1,000*l.*). The building consists of two stories. The lower room will be a boys' school. It is about 60 feet long by 30 feet wide, and 15 feet high. The floor is unbroken by pillars, as the upper room is supported by girders. The upper room, which is at present to be used for church service, and hereafter for a girls' school, differs from the lower room in that the roof is arched: it has stained hammer-beams, and square windows with stone mullions. There are also two class-rooms. The buildings were designed by the Rev. S. Andrew, of Lichfield, and have been carried out under his direction, with aid kindly given by Mr. J. H. Sandars, the architect to the Midland Railway Company, both of whom gave their gratuitous services from interest in the cause. The builder is Mr. J. Wood.

ALBERT MEMORIALS.

Mr. Theed's statue of the Prince Consort, which has been placed in the principal corridor at Balmoral, has been uncovered. The Queen expressed her approval of it. The statue, which is in marble, represents the Prince in the Highland dress, with a rifle in the left hand, the right resting on the head of a favourite dog. Upon the pedestal is the following inscription, selected by her Majesty: — "Albert, Prince Consort, 1861. His life sprang from a deep inner sympathy with God's will; and therefore with all that is true, and beautiful, and right."——At a meeting of the subscribers to the Perth Albert Memorial Fund, the report of the committee, which recommended that a literary institute should be formed under the designation of the Albert Institute, and that a hall for the purpose of the Institute should be erected in George-street, was read. The cost of the proposed erection was estimated at 2,000*l.* Mr. Craigie moved that the report of the committee be approved of. Ex-Provost Imrie moved that a statue of the late Prince, by Brodie, should be procured and erected on a suitable site to be afterwards fixed upon. Mr. Imrie's motion was carried by a majority of twenty-one, and a committee was appointed to give effect to the resolution.——A proposition is afoot to erect a grand pyramid, in memory of the Prince, on Worlebury Hill, Weston-super-Mare. The idea has been laid before the Lord of the Manor, Mr. J. H. Smyth Pigott, who has not only offered a piece of ground, 60 feet square, for the purpose, but promised to give the stone for the erection. The point of the hill upon which it is proposed to build the pyramid is seen from the surrounding country throughout a radius of fifty miles.——The first stone of the Albert Memorial in Abingdon has been laid.

MEMORIAL, IN HOLY TRINITY CHURCH, BROMPTON.

At the east end of the south gallery of this church, a memorial of the late Mr. Stroud Lincoln, who was for several years churchwarden of the parish as well as a very liberal benefactor to the church, has been recently set up by his widow. It includes a circular window filled with stained glass: the reveals, widely splayed, have a small column at each angle, carrying an escoinson arch, and going down to a horizontal cill, between which and the bottom of the window a brass is fixed up, bearing the name of the deceased. The spandrels between the window and the reveals have a simple floral decoration, painted. Mr. E. Hakewill made the design; Messrs. White executed the stonework, and Messrs. Warrington the glass.

Mrs. Lincoln had previously presented five stained glass windows to the church.

A handsome carved stone font, also by Messrs. White, has been presented by Mr. Wollaston to the church on leaving the parish.

THE LATE MR. WILLIAM CUBITT, M.P.

At the moment of going to press, we hear with great regret of the death of Mr. William Cubitt, M.P. for Andover, and late of the firm of Messrs. W. Cubitt & Co., of Gray's-inn-road. The lamented event took place at Mr. Cubitt's country residence, Penton Lodge, on Thursday morning. Mr. Cubitt had been ill for some time, but it was not supposed till within a few days that his end was so near. He was in his seventy-third year.

THE JEWISH MODEL DWELLINGS IN COMMERCIAL STREET.

We have ascertained the following further particulars as to these dwellings. The design was selected by Professor Donaldson, in a competition of eight architects, who had made these buildings a special study. The successful architect was Mr. H. H. Collins. The building (for thirty families) consists of alternate sets of two and three rooms, each having a separate entrance, and being complete in itself. Each dwelling contains a living-room, 12 feet by 14 feet, with water-closet, sinks, pantries, coal cellars, and every domestic requirement, and bedrooms, with closets, &c. Each apartment is specially ventilated by a simple arrangement. The drainage, dust, and other sanitary points have been considered. The rental of the dwellings varies from 5*s.* to 6*s.* 6*d.* weekly per set, and the shops at 12*s.* per week. At these rentals they have nearly all found eager applicants. The total cost (exclusive of the purchase of the freehold) will not exceed 6,000*l.* The building has been recently visited by the trustees of the Peabody Fund. The contractor was Mr. R. Stap, and his work has been carried out under the direction of Mr. C. Jupp, clerk of works. The project has been carried out by a limited liability company, named the Jewish and East London Model Lodging-house Association, with shares of 20*l.* each. Amongst other gentlemen who have taken an active interest in the matter is Mr. A. Mocatta.

GAS.

The Corporation of Stockport have voluntarily expressed their intention to reduce the price of their gas (24 candles), manufactured entirely from Wigan cannel, on the 1st January next, from 5*s.* per 1,000 feet beyond the borough limits, and 4*s.* 6*d.* per 1,000 feet within the borough, to one uniform rate of 4*s.* per 1,000 feet, with a progressive scale of discounts, commencing on a quarterly consumption of 200,000 cubic feet. By this arrangement the largest consumers will be supplied at 3*s.* 6*d.* per 1,000 feet. Their present engineer, Mr. Frederick Leslie, since his appointment, has extensively altered the plant and mains, having laid a 24-inch trunk main, and several miles of mains of all sizes during the past spring and summer seasons. The Corporation propose next year to spend between 15,000*l.* and 20,000*l.* in new works and mains.——The Surrey Consumers' Gas Company have declared a dividend of 7 per cent. for the last half-year, or 14 per cent. per annum, comprising 5 per cent. for the half-year and two per cent. on account of back dividends,—a happy idea which some one has of late suggested for the frustration of the public benefit from reductions of price by limitation of dividends to 10 per cent. per annum.——At a public meeting in Stourbridge it has been resolved to request the local commissioners to erect new gas works for the town. The consumers appear to be willing to compromise the matter with the local gas company if the latter will consent to a uniform maximum price of 3*s.* 9*d.* per 1,000 cubic feet in the township, and 4*s.* 2*d.* out of it.——The Sheffield Gas Company have declared a dividend of 10 per cent. per annum on class A shares, and 8 per cent. on class B.

SANITARY REPORT ON MARYLEBONE.

The seventh annual report on the health of the parish of Marylebone, for 1862, by R. D. Thomson, M.D., F.R.S., medical officer of health for the parish, has been printed by order of the vestry. In this report the medical officer congratulates the vestry on the favourable state of the public health. Nevertheless sanitary labours, he remarks, are on the increase; for "as the knowledge of the condition of the people increases, so the errors of their sanitary arrangements become known, and more tangible methods of reaching the evils which beset them are divulged from day to day." The mortality of the parish during each of the seven years, 1856-62, has been 3,428, 3,738, 3,836, 3,612, 3,647, 3,893, 3,767, giving an average of 3,703. Although, therefore, the deaths of last year were above the mean, they were not so high, with an increasing population, as in 1858 and 1861. Scarlatina numbered among its victims in the seven years, respectively, 96, 91, 230, 216, 113, 104, 165, total 1,015; while the deaths from whooping cough, during the same series, were 131, 131, 139, 93, 104, 175, 115, total 888. "Both of these complaints," says the medical officer, "are undoubtedly endemic, or produced by local causes, and are capable of being communicated from one individual to another." "In former reports," he continues, "I have alluded to a serious danger to which we are more exposed from year to year. Our new buildings are diminishing and our population is increasing. It must therefore become denser; and, as this overcrowding proceeds, a limit must be reached, at which *fever* is the powerful check; but it is an awful one, since *the poison thus produced in the human system, by vitiated air and excretions,* is capable of extending its baneful influence to others, and in a most fatal manner. The poor, unable to help themselves, thus become unwilling destroyers of their lives and of those in better circumstances. Impressed with these facts, I have been chary of recommending the removal of inhabitants from even illegal dwellings until they should be provided with new habitations without the obligation of overcrowding. The necessity for legislation in this direction is continually becoming more urgent. For where are working men and women to live? and, more particularly, what is to become of families? These are social questions which are connected with the basis of health and morality. There is a growing disinclination among owners of property to accommodate working people with families, from the liability to injury to which their property is thus subjected. And this difficulty, in the married state, of procuring lodging, must tend to throw obstacles in the way of marriage, and to add fuel to the flame of the social evil which is at present attracting so much attention in the metropolis."

A remarkable discrepancy has been observed in the rate of dying in different parts of the parish. "In All Souls, 61 children die to 1,000 living; in Cavendish-square district, 42 per 1,000; Rectory, 79 per 1,000; St. Mary, 66 per 1,000; Christ Church, 79 per 1,000; St. John, 54 per 1,000. The mortality among children in Christ Church is excessive. When we compare the mortality of children, under five years of age (417), in that district, with the total mortality (802), we find that considerably over *one-half* of the deaths is due to the loss of these innocents. In the whole of the parish, of 3,771 deaths, 1,552 are of children under five years of age, or in the proportion of 41 per 1,000."

Since the last annual report was issued a new clause in the Metropolis Local Management Act, respecting cow-yards, has come into operation, by which every "place for the keeping of cows," requires to be annually licensed at a special sessions of the justices of the peace, under a penalty of

five pounds. This enables the vestry to carry out, legally, the rules issued some years ago for the regulation of cow-houses.

VENTNOR, ISLE OF WIGHT.

At a special meeting of the Ventnor Improvement Commissioners, Dr. Leeson in the chair, it has been resolved, by a large majority, to adopt the "Local Government Act, 1858," with all its amendments, as a substitute for the "Ventnor Improvement Act, 1844." The town had already been thoroughly drained, and many permanent works had been carried out under the old Act; but it was found necessary, from the rapid growth of the place, which has resulted partly from the very favourable health report of the registrar-general for the years 1851—1860, and partly from the impetus given to it by the construction of the railway and harbour works, to obtain the greater borrowing powers, and also the more compulsory sanitary clauses of the public Act of 1858. A correspondent on the subject adds:—"Ventnor owes much to the *Builder* in sanitary matters, her leading men always quoting it as an authority. The seconder of the resolution adopting the Local Government Act read the letter from your Eastbourne correspondent, which had a marked effect."

NON-DRYING OIL.

Having read in the *Builder* the letter of "Victim," I may state, in the way of reply, that in all works which have passed under my direction, I have ever found that where benches, &c., in a church, or the ordinary joiner's work in a house, were prepared for staining, and linseed-oil was used, the varnish never dried. So thoroughly am I satisfied that the oil is the cause, and that there is no need for oil of any kind, that I now forbid the use of anything beyond good size, which is all that is necessary to ensure, with proper stain and good varnish, most satisfactory and perfect work.

When I write proper stain and good varnish, I mean such as can be obtained from Swinburn, of Bush-lane, and Messrs. Manders, Brothers, of Oxford-street and Wolverhampton.

J. W. Hugall.

PLUNGING-BATHS IN MODEL LODGING HOUSES.

In making a classification of the various diseases that are productive of diseases of the heart, I find amongst the poorer classes the majority are caused by zymotic affections,—measles, scarlatina, whooping-cough, typhus and rheumatic fevers, ague, cholera, and rheumatism! I have not by me statistics of a later date than 1859; but in that year 106,645 deaths were accounted for: of the whole population the deaths of 5 in 1,000 were occasioned by zymotic diseases. In that year 17,133 died of heart disease; and I am convinced that the greatest proportion of these arose from zymotic diseases. Now, therefore, that sanitary measures occupy so much public attention, every proper precaution should be taken, and due regard paid to the subject. How far the inoculation of vaccine matter tends to produce convulsions is a question. Suffice it to say, 25,954 died of that malady!

My object in adducing these statistics is to show what pains and attention are given for the abatement of smallpox, by the introduction of a different disease into the system: this is checking the result without touching the cause—whereas, that cause might, I believe, be greatly modified, if not entirely prevented, by *sanitary measures*. Let those who wish to assist their fellow creatures pay attention to that—treat the cause, not the result.

There is always a heavy and peculiarly faint smell in chambers where death has occurred through fever. If a surveyor, on inspection of a poorhouse or common lodging, should detect the same odour, although no person may be lying sick, he may be sure that zymotic disease is being engendered there. If this smell palpably strike the attention of those who visit such abodes,' surely the duty of inspection and visitation is a paramount necessity, and the erection of suitable model lodging-houses is as much needed for public safety as for the inmates themselves.

But this is not all that is required. Each lodging-house should have a plunging-bath, built after the style of the Roman bath in the Strand, having fresh water constantly passing through. Children at an early age would take naturally to this all sanitary habitude: they would learn to swim, and compete with their associates in the art. But if the poor have to pay for their ablutions, for bathing, and for water, how is the evil to be combated, or the cause prevented?

It is needless to say that the public baths already do a vast deal of good; but they attract those only who have money to spare: thousands there are who congregate in swarms through the courts, lanes, and slums of London for whom there is no bath; not even water for their Sunday ablutions! Diseases are bred by this class, and the industrious suffer accordingly.

Introduce public cold plunging-baths in every model lodging-house, in every populous neighbourhood, and that will do great things. Ask any man who has been accustomed to his tub or plunging bath, if he would leave it off? If not, common sense will tell that the poor man's offspring would soon acquire the same taste.

Eldridge Spratt,
Medical Officer to the Hospital for Diseases of the Heart.

CHURCH ARCHITECTURE.

Sir,—Your paper contains a report of Mr. Hope's paper on "Church Architecture," read at the Manchester Church Conference. That gentleman, while expressing the desire to carry out literally the directions of the Prayer Book and the principles of the Church of England in the arrangements and details of the structures devoted to her use, advocates arrangements and things in direct antagonism to both the guides he professed to follow.

It is true, as Mr. Hope argues, that the Prayer Book states that there was to be "a chancel, and that it was to be as in times past;" but this is precisely what Mr. Hope does not mean; but the thing which, under the same name, arose after the eleventh century, viz., a small temple added to a church, with a screen and rood over, altar at the east end, and credence-table at its side; a place, in short, designed expressly by priests for sacerdotal ceremonies and a material sacrifice.

My attention as an architect was especially called to this subject many years since, and in the course of my studies I made the discovery that no single arrangement or detail in any church erected before the ninth century, that in any way favours the peculiar doctrine of the Church of Rome, exists as part of the original construction, and if now to be found in it, came there as an addition of comparatively late date.

In the Jewish, as in all other temples, the worshippers stood without, and the priests only were admitted within. It was never designed for social worship, and was never so used. The early Christians repudiated the temple model, and selected one in direct opposition to its principle of arrangement,—that of the Roman basilica. This hall was always a simple room for public meetings, having at one end a low platform with "cancelli" or railings, about 3 feet high on its edge.

As the president of the meeting, or the judge, when the hall was used as a court of justice, sat behind this cancelli or railing, he was by a figure of speech called the "chancellor," and the spot on which he sat the "chancel." This term then was of Roman civil origin, and has not the slightest connexion by name or use with the Communion service.*

Every old church up to the ninth century was constructed with a simple chancel platform or bema, its Greek name, for the sole purpose of giving raised seats to the presiding elder or bishop and his associates, and the Lord's table stood in the midst of the people; and when they were reclined or seated around it, the ministers left their seats of honour to wait on them.

The custom which arose, after the last great persecution, of celebrating the Communion on the tombs of martyrs outside the city, and the subsequent erection of churches over them, led to the use of copies of these stone tombs, which in after ages were called altars, though in no way resembling them.

When transubstantiation became the doctrine of Rome, it required for its accommodation the same principle of arrangement as in that of the ancient temple,—that is, a veiled or screened place into which priests only should be admitted. The ancient churches throughout Italy being so totally opposed in plan to the temple model, prevented this doctrine of Rome from ever being properly accommodated at Rome; but in countries of more recent converts, as in France, Germany, and England, where no architectural precedents existed to fetter the imaginations of the architects, they very naturally made the new structures suitable for the prevailing doctrines, and thus the old primitive model was gradually changed to the Mediæval one, and the great cathedrals and churches in the last-named countries became half temples in their plans. A collection of the plans of churches from the eleventh to the fourteenth century, shows, by the gradual lengthening of their chancels, and the setting up of screens in imitation of the veil, the progress made by the new doctrine of transubstantiation.

In our earliest churches, containing screens, they were additions; in the later ones parts of the construction.

The Holy of Holies, in the Jewish temple, was at the west end; there is but one church at Rome that stands east and west, and in that the entrance is at the east end, the chancel at the west. The orientation of churches is thus of Mediæval origin.

In the Constantine churches at Rome, her fully "developed doctrines," as Father Newman terms them, led to the boxing out the old chancels with their simple stone seats, and the construction in front of them of a modern screened affair in imitation of the "Holy of Holies." The walls of these old churches were also cut through in the fifteenth century for the insertion of side chapels to saints.

The author of a little work on our churches—Cardinal Wiseman, I believe—puts into the mouth of the imaginary disputants, a Catholic and a Protestant, a taunt from the former, that the English Church has got buildings which "she cannot use as their designers intended." The charge is unquestionably true; and the Romanists at Rome are in precisely the same predicament: the primitive model is only suitable for Protestants, and the Mediæval one is inimitably adapted for Papists.

From the establishment of Christianity to the present day, the Roman style of architecture, or its modern modifications, was the one adopted for church building, save for the three or four centuries during which the Gothic style prevailed in this country, France, and Germany. If, then, any "style" could claim the title of "Christian," it would be the Roman; but style arose always and everywhere from constructive peculiarities: it is, in fact, simply construction ornamented—the mere tongue of architecture, which speaks alike for all creeds. Creeds originate plans, but never styles.

A consideration of these facts, and I challenge contradiction to them, will, I trust, induce Mr. Hope to modify his views, and prevent him in future from urging Churchmen to adopt a model for their structures which owes all its peculiarities to that doctrine which the Church of England so emphatically condemns as "idolatrous and blasphemous."

John Elliott.

P.S.—It is not the first time I have addressed you on this subject.

* Had it not an allusive connexion with the heathen temple service, however, as its model? Was not the judge, for example, in the *place* of "the god," behind the vail?—Ed.

COMPENSATION TO TENANTS AT WILL.

London, Chatham, and Dover Railway v. *John Pheasant.*—In this case, heard at Guildhall Police Court, Mr. Pheasant, a tailor, in business in Water-lane, claimed 175*l.* compensation. Mr. White appeared for the company, and Mr. Eadey for the claimant.

The claimant stated that his rent was 36*l.* a year, rates and taxes 16*l.*, and repairs about 10*l.*; that when he entered into possession of the premises twelve years ago he paid a premium of 60*l.*, and that he paid two journeymen 1*l.* each per week all the year round. He kept no books, but produced a set which he had made up from invoices and the measure-book for the purposes of this claim. He estimated the wages for 1862 at 104*l.*; stock purchased, 116*l.*; rent and taxes, 52*l.*; and repairs and sundries, 25*l.*; making a total of 297*l.* His gross takings during that year were 442*l.*, including about 33*l.* which he received from lodgers, which, after deducting 297*l.*, left a net profit of 145*l.*, to which was to be added 10*l.* for removal, and 20*l.* as a proportion of the premium paid by the claimant twelve years ago, making up the claim of 175*l.* The claimant said he had succeeded in getting another house in Warwick-lane at the advanced rental of 70*l.*, which, with rates and taxes, would make a serious difference to him, as he was standing at only 18*l.* or 20*l.* a year in Water lane.

Mr. White said the books produced were most unsatisfactory, as they were prepared for the occasion. The claimant had got another house and would take his business with him, so that he would not materially suffer by the removal. A sum of 50*l.* would be ample compensation.

Alderman Hale said he thought the claimant was entitled to compensation for the increased rent he would have to pay, as the neighbourhood he had removed to

was not by any means an improvement. Under all the circumstances he awarded 100*l.* compensation, and 10*l.* for expenses of removal, without law costs, possession to be given in fourteen days.

WALPOLE'S ANECDOTES OF PAINTING.

SIR,—Allow me to say a few words with reference to the very terrible sentence passed by Mr. Peter Cunningham on Dallaway's and my reprints of "Walpole's Anecdotes of Painting, &c.," namely, that "the text of both reprints is faulty beyond parallel; that neither reprint *represents the text of Walpole*; in short, that the two reprints made since Walpole's death of Walpole's great work are *shamefully deficient in whole pages* of valuable Walpolean matter."

The *text* of both reprints is the same: mine is professedly a reprint of Dallaway's, and the text of both is from that of Dodsley, 1782, the third and last edition *published* by Walpole himself, and which Dallaway seems to have preferred to the "Old Berry and Elder Berry" edition so highly appreciated by Mr. Cunningham, but which is a posthumous work.

Now, as the omissions of these "shameful reprints," deplored by Mr. Cunningham, are not to be found in the last edition published by the author himself, I think the literary public will admit some extenuating circumstances.

It was probably wrong not to have incorporated the omitted "Old and Elder Berry" matter, in the reprints of the last author's edition, and I can only say that if any purchaser of my reprint feels his loss, I am very sorry for the omission; but, at the same time, I venture to suggest that the several hundred notes added by Dallaway and myself, may be looked upon as some compensation, however inadequate, of the few omitted paragraphs; and I trust that those who have so far honoured the book, will not grudge the money they have laid out on Russia or Morocco backs. R. N. WORNUM.

GOVERNMENT NEEDED.

SIR,—As a working man, I tender my sincere thanks for your *earnest* and unceasing endeavours in bringing the subject of working men's homes before the public, and, I hope, the Government too. If things remain as they are, the workers of this country will shortly be annihilated by the bad food, bad water, and bad dwellings which fall to them as the conditions of their existence. It is not in London only, or in one town more than another. There is not a town or village in England, *not one*, where these destructive agencies are not in active operation, and receiving daily accessions of strength. All this arises from the neglect of Government in not interfering to check the avarice and extortion of house lords. Government well knows that other conditions are necessary to insure proper health to the working bees, their wives and families: let it do its duty, and prevent the erection of dwellings that do not afford a sufficient number of cubic feet of air for healthy respiration: let it also prohibit such dens as are already erected and do not contain these requisites, from being occupied: and also cause entrances, lanes, or streets to be of sufficient width to contain an ample quantity of atmospheric air for the supply of such dwellings. Unless something of this be done, and speedily too, the agencies already referred to will produce results that no thinking man will be surprised at.

Government can do this: it is its legitimate business. It has taxed the country for means to build royal palaces, while I and millions of others, industrious, and having large families, have not a decent pig-stye to shelter us from the inclemencies of the weather.

Again receive my hearty thanks for your earnest endeavours on our behalf. OBSERVER.

Exeter.

Miscellanea.

THE HAYMARKET THEATRE. — Mr. Charles Mathews has returned from France with fresh vivacity and youthfulness of aspect, and in "Cool as Cucumber," and his original part of the *Chorus* in Planché's classical extravaganza, "The Golden Fleece," exhibits both with good effect. Mrs. Charles Mathews, as *Medea*, acted and sang with remarkable force; and Miss Louise Keeley's great song in the second part was enthusiastically encored, and deserved to be so: it was exquisitely sung.

SAINT MARTIN'S-IN-THE-FIELDS LIBRARY AND READING-ROOMS.—The first lecture of the season was given on Tuesday, the 27th, by the Rev. W. G. Humphry, B.D., vicar, on "Paris in 1863." The reverend gentleman gave a lively picture of the manners and customs of the Parisians, showing the points of variance between the French and ourselves, and recommending a visit to Paris as a means of improvement for all classes.

BAVARIA.—A communication from Kelheim (Bavaria), in the *Augsburg Gazette*, informs us that the Grand Hall of Deliverance, the building which the King has had erected in honour of the warriors who fought for the liberty of the country, has just been inaugurated by King Louis. At the moment of the inauguration King Louis pronounced the following words:—"Welcome, brave warriors of the struggle of deliverance: salutation to all of you. It is the most magnificent epoch in the history of Germany, and we must hold to it firmly. I can only repeat what I have already written for the inscription in the Hall of Deliverance:—'Let Germans never forget what it was that rendered the struggle necessary, and what made it victorious.'"

THE NEW PRESIDENT OF THE SOCIETY OF ARTS.—The Council of the Society have elected the Prince of Wales as their president. His Royal Highness, while consenting to be elected, expressed some diffidence as to his suitability for such a "situation;" but deferred to the wishes of the Council, and of her Majesty, who naturally desired her son to occupy the position so long filled by the Prince Consort.

POST-OFFICE SAVINGS BANKS.—In two years, from 16th September, 1861, to 15th September, 1863, the Post-office banks have received 3,736,885*l.* in 1,208,938 separate deposits, and they have repaid 1,088,544*l.* in 226,215 separate sums. They have opened accounts for 324,355 depositors: on the 15th September, 1863, the accounts of 266,857 of these depositors remained open in the books of the Post-office, and the total sum due to those depositors was on that day 2,618,340*l.* Throughout the whole kingdom the old banks lost 55,000 and the Post-office banks gained 160,000 depositors.

OPENING OF A COTTAGE HOSPITAL AT WALSALL.—The committee of this institution have fitted up buildings in Bridge-street ready for the reception of patients, and voluntary and qualified lady nurses are located on the premises. The houses, however, are not of the humble unpretending character which the word "cottage" would seem to imply, but, on the contrary, are of large size and superior construction, and were the residences of persons moving in the better walks of life. The hospital buildings consist of two of such houses, a communication having been made between them. One of these is, for the present, mainly set apart for the accommodation of the lady attendants, servants, &c., and the other is devoted to hospital purposes.

POISON FROM LEAD PIPES AND CISTERNS.—A London correspondent sends us a communication from a "large contractor in the north," who writes him to the effect that he believes it must be the fact, as stated in the *Builder*, that water is liable to be so poisoned, especially in new houses; because he has "observed a good many deaths and a deal of trouble in newly-formed streets, especially where there are large blocks of tradesmen's houses," and he wishes to obtain more information on a subject so important to all connected with the building trades, as well as to the public. He does not seem to be aware that the *Builder*, which first brought this subject under public and professional notice, has repeatedly treated of it. He will also find information as to it in Professor Christison's treatise on "Poisons," published at Edinburgh, and in other chemical works. Chemists, however, now differ as to the circumstances under which the poison is most apt to be generated.

OPENING OF THE NEW TOWN HALL, GRIMSBY.—This event took place on the 15th of October. The building stands in a good position, on land the property of the corporation, in close proximity to the River Head, and fronting towards the main street. The style is Modern Italian, carried out in stone and white brick. The entire front consists of a centre, with pavilion wings, formed by projections, with Corinthian pilasters upon a rusticated basement. In the centre of the front is an open portico of coupled rusticated Ionic columns, forming a covered entrance. The centre main floor is composed of seven recessed arches, in which are circular-headed windows, surmounted by a modillion cornice and open balustrade. The ground-floor comprises entrance, vestibule, and corridors, with staircases to the public room, or town-hall; offices for town clerk, magistrates' clerk, and surveyor; council-chamber and sessions-house, with requisite retiring and waiting rooms attached; police-offices, and cells for prisoners, with residence for superintendent of police; engine-house, store-room, &c. In the centre of this group of buildings an open court is formed, adapted for the exercise of the police; and round this a covered corridor gives access to the various departments. The large hall is situate on the first-floor, and is 80 feet long by 40 feet wide, and 30 feet high; with retiring-rooms attached, with staircases at each end of the building, over which a gallery and orchestra are formed, making the hall a total length of 112 feet. The sides of the hall are divided by Corinthian pilasters, surmounted by a modillion cornice, over which rises a deep core, with ribs and panels. The architects were Messrs. Bellamy, Hardy, & Giles, of Lincoln; and the contractor, Mr. J. Brown, of Grimsby. The heating and ventilating apparatus were provided by Messrs. Frisby & Son, of Loughborough; and Mr. Maughan, the borough surveyor, acted as clerk of the works.

ART IN THE CHURCH.—The decoration of the vacant spaces above the altar of Christ Church, Marylebone, have been entrusted to Mr. W. Cave Thomas. The large lunette, about 25 feet by 12 feet, is to be filled with a picture of the angels appearing to the shepherds.

THE HOTEL MOVEMENT.—The prospectus of the Constantinople and Alexandria Hotels Company has been issued, inviting subscriptions to a first capital of 100,000*l.* in 5,000 shares of 20*l.* each, for the purpose of supplying efficient hotel accommodation at these two points. The architects are Messrs. T. Smith & Son.

METROPOLITAN BOARD OF WORKS.—At the usual meeting on the 23rd inst., the Board was for some time in committee considering the report of their solicitor as to the sufficiency of the sureties tendered by Messrs. Furness for the performance of the works of the portion of the northern embankment of the Thames between Waterloo and Westminster bridges. The report being entirely satisfactory, the tender of Messrs. Furness (520,000*l.*) was accepted. Mr. R. Taylor called the attention of the Board to the late accident in Larkhall-lane, by the falling out of the fronts of two houses in the course of erection there, by which several persons were injured, and suggested an investigation. The subject was referred to the Building Act Committee.

PORTRAITS OF THE PRINCE AND PRINCESS OF WALES. — Mr. Jensen has completed fine portraits, life size, of the Prince and the Princess of Wales. Being himself a Holsteiner, he has painted his illustrious countrywoman *con amore*, and produced an admirable picture. It represents the Princess in a room in Marlborough House, and is made a sort of record picture, showing, with great skill, the Dagmar necklace, the opal and brilliants bracelet given by the Queen, the Brussels lace dress, which all know, and so on. The Prince is represented in the robes and costly chain of the new order, the Star of India. As a likeness, it is not so striking as that of the Princess, but it is an equally good if not better picture.

PROPOSED LOCAL EXHIBITION BY THE SCHOOL OF ART, HALIFAX.—We are glad to learn that the committee of this School of Art purpose holding a *conversazione* and art exhibition early in November. This is a step in a right direction, as not only will it bring the object and work of the school before those interested in its progress, but will also give its students and the public an opportunity of seeing specimens of the modern British school of painting, as we learn that several gentlemen in the town and neighbourhood have kindly consented to exhibit fine specimens from their collections. It is nearly thirty years since an exhibition of paintings was held in this town. Much of the future fortune of the town depends on the position it will be able to occupy and defend as a vast factory for the production of works in which art and industry shall be happily combined.

WARREN'S "IMPREGNABLE AND UNSINKABLE FLOATING CASEMATE BATTERY," &c.—Mr. William W. Warren, of Milton-next-Gravesend,—at one time a pupil of Messrs. W. Cubitt, of Gray's-inn-road, we believe,—proposes a system of construction for an "impregnable and unsinkable floating casemated battery, submarine gun and armour plating adapted for stationary batteries, and for convoying troop-ships, &c." In an abridged but still a lengthened description, he says:—"I prefer constructing the centre portion of the vessel of rolled wrought-iron double-flanged vertical ribs, from 12 inches to 18 inches wide, and from 2 inches to 4 inches thick, firmly riveted and bolted together, or of angle or T iron,—solidity and stiffness being the great object,—on which are placed the various layers of malleable metals, taking care to stop all chemical or galvanic action, by means of bituminous composition, mixed with hair; and were it not for the cost I would prefer using the finest copper-plating only over the iron, so as to act on the principle of a gradual tenacity of resistance, thereby easing and stopping the momentum, and distributing the shock, and thus prepare the iron-plating to finally resist, without splitting or destroying the plate; or the roof-deck and sides of centre position of battery can be protected with oak, or other wood, compressed in short lengths, and confined, the cross-grain of wood being opposed to the action of fire." Mr. Warren's invention has been presented to the Admiralty, and he has permission to erect a target at Shoeburyness on his compressed wood cross-grain principle; but the cost, which is 5,000*l.*, prevents him.

"Ventilation through Windows."—The paragraph in page 763 of the *Builder* mentions a system of ventilation which Mr. Chantrell, the architect, used some twenty years ago, and which, upon his recommendation, I have since adopted, and believe to be efficacious.—J. W. H.

Baths and Wash-houses, Hertford.—At a meeting held in the Shirehall, Hertford, it was agreed that baths and wash-houses should be established in Hertford. The leading inhabitants of the town were present, and letters were read from those unable to attend, approving of the project. Mr. J. F. Fairbank, of Parliament-street, Westminster, C.E., attended on the part of the promoters, and a committee was formed to further the object.

The new Stepney Meeting-house.—This large building has been opened for public worship. It has been erected, at an expense of 10,000*l.*, for the congregation of the old Stepney Meeting-house, recently demolished. The new structure has been raised on a spot cleared for the purpose, close to and on the eastern side of the old chapel. The new edifice is in the Gothic style, with three towers. Those at the north-east and south angles are about 70 feet in height. The tower and spire at the south-east angle of the building is 150 feet in height, and the metal vane surmounting the whole 20 feet more. The interior is very plain, and fitted up with seats on the ground-floor and in the galleries for 1,300 persons. The architects were Messrs. Searle, Son, & Yelf. The total expenses of the building, the site, fittings, railings, and tower, will exceed 11,000*l.*, of which 9,200*l.* have already been collected. The family of Mr. Scrutton, shipowner, sail-maker, and ship-builder in the East India-road, have contributed 3,000*l.*

Accidents.—Five men have been injured at Eastbourne while employed as workmen on some houses in course of erection on Cornfield Green. Owing, it is supposed, to the negligent way in which the scaffolding-poles were fastened, the cords slipped, and the poles and planks came down with the men who were at work on them. Two of them are not expected to live.——At Moffatt, in Scotland, a well-sinker, from Strathaven, while engaged in constructing a pump-well for the convenience of a house in process of erection in Havelock-terrace, nearly lost his life by the falling in of the stonework built round the mouth of the bore. The well had been sunk 21 feet, and a portion of it had been built round the top with stones. The digging below loosened the masonry, and the whole tumbled in upon the workman. He was got out, however, little the worse for his temporary entombment.——The *Buffalo Courier* of September 28, states that the steam boiler in a large building known as "Swartz Iron Works" had exploded, making nearly one-half of the structure a shapeless mass of ruins, in which at least twenty workmen were buried alive. Two were taken out dead, and four or five others fatally injured.

Liverpool Architectural Society.—At the second meeting of the session, Mr. W. H. Weightman, president, in the chair; Mr. Kilpin expressed his gratification at the steps which are being taken for the preservation of the sculpture in the pediment of St. George's Hall, which, he said, was designed by the late Professor Cockerell, and executed at a cost of upwards of 4,000*l.* So unfavourable to the material of the sculpture (Caen stone) had been the climate of Liverpool, that the whole of the surface was more or less corroded, and in some places the corrosion had sunk fully half an inch deep, rendering the most active and prompt measures necessary to preserve the whole of the sculpture from decay. The borough surveyor had directed that the corroded surface should be carefully removed. This had been done without any very material deterioration of the features or forms of the figures (?), and the new surface was to be carefully coated with silica, according to Mr. Ransome's patent. Most sincerely did he hope, and he was very much inclined to believe, that it would have the desired effect.—Mr. Frank Howard thought it would be a very great blessing for Mr. Cockerell's reputation if the sculpture in question were to rot away altogether.—The society then proceeded to discuss the scale of architects' charges recommended by the Architectural Alliance.—At the previous meeting, the following resolution was unanimously adopted:—"That the society begs to record its thanks for the very great honour which Mr. Huggins has conferred upon the society, and the compliment he has paid in dedicating to it his valuable work, 'The Course and Current of Architecture,' and its accompanying chart."

Builders' Benevolent Institution.—The dinner took place on Thursday evening, as announced, but we must defer particulars till our next.

Railway Returns.—The traffic receipts of railways in the United Kingdom amounted, for the week ending the 17th of October, on 11,028 miles, to 608,620*l.*, and for the corresponding week of last year, on 10,578 miles, to 579,140*l.*, showing an increase of 450 miles, and of 29,480*l.* in the receipts. The total receipts of the week show a decrease of 10,000*l.* as compared with those of the preceding week, ending the 10th inst.

The late Mr. James Murray, Architect.—Mr. James Murray, of Coventry, died there, on the 24th inst., at the early age of thirty-two. He was an architect of much ability; and considering the shortness of his career, had executed a large number of buildings, churches, schools, and town-halls, some in partnership with other architects, but the majority on his own account. Not long ago he published the first part of an intended collection of his works.

Box.—On the 20th inst., the men employed by Messrs. Pictor & Sons at their Bath Stone-works, Box and Corsham, to the number of nearly 200, were invited to a dinner on the occasion of the coming of age of Mr. C. J. Pictor, and his accession to the firm. A large tent was erected on the lawn in front of Mr. Robert Pictor's house at Boxfield-farm, in which the men sat down to dine. Mr. Wm. Lewis, of Bath, took the chair.

Conservative Land Society.—At the forty-fourth quarterly general meeting of the shareholders, held on the 20th inst., Viscount Ranelagh in the chair, the report stated that the receipts for the quarter were 23,496*l.* 8s. 4d.; and for the year ending 30th September, 1863, 75,754*l.* 5s. 5d.: total cash receipts since the formation of the society, 701,146*l.* 18s. 7d. The increase in the year's receipts over those of last year was 11,950*l.* The total sale of land was 330,370*l.* 8s. 5d.

Telegraphic.—The Atlantic Telegraph Company have now provided the means for purchasing a new cable, and the attempt will be made to restore communication with America during the summer of 1864. On the present occasion the board have committed their scientific affairs, and the judgment of the tenders sent in reply to their advertisement, to a scientific committee. The cable will be made up of a conductor having seven wires laid spirally into a strand. The insulator will, we regret to observe, be still of gutta percha. The contractors, as was anticipated, and notwithstanding the directors' protestations on the subject, are Messrs. Glass, Elliot, & Co., who have undertaken the entire work of manufacturing and laying the cable, and are to hand over the communication to the directors in perfect order during the summer or autumn of 1864; their profit of 20 per cent. being payable in twelve monthly instalments (to cease if the cable is imperfect), commencing immediately the cable is in efficient working order.——The telegraph has been completed to Sandringham, the Norfolk residence of the Prince of Wales. The Prince has now direct and private communication with Buckingham Palace, and through that place with Osborne and Balmoral.

Disease in the London Dairies.—A lecture has been delivered at the Marylebone Institute, by Professor Gamgee, of the new Veterinary College, Edinburgh, upon disease in the London dairies and its prevention. The lecturer said that a disease had since 1842 prevailed among the cattle in this country, carrying off a large per-centage per annum—a pulmonary disease, which was as fatal to cattle in the fields as in town dairies. He thought the metropolitan cowhouses could compare favourably with those in the country: in fact, they were models of cleanliness. Still it was a fact that town cows were slaughtered within six months of their entrance on town life; and this was a necessary evil, for the London dairyman must either lose his animals by disease or sell them to the butcher. The disease among the cows led to the sale of diseased milk, and the consumption of such milk caused a similar disease in the human beings consuming it. Every animal showing the least sign of the lung disease ought to be at once taken away and publicly sold. The sale of diseased animals might without much harm be permitted in the early stages, and in association with preventive measures. He had collected a number of facts bearing upon the question of inoculation of animals for this lung disease. From these it appeared that of 384 animals not inoculated, 135 died; of 352 partially inoculated, 39 died; while of 329 inoculated animals only 20 had died.

Fever in Carnarvonshire.—At Festiniog and in the neighbourhood a description of low fever is said to have been so rife amongst the labouring classes as to have necessitated an official inquiry into the cause. The fever is generally supposed to have been produced by the night and day labourers sleeping in the same beds, thus preventing the beds and bedclothes from being exposed to the air. It is questionable, however, whether they would have been exposed to the air under any circumstances.

A Theatre in Windsor Castle.—More than two years ago there was a desire on the part of her Majesty, from the great inconvenience attendant upon dramatic entertainments given at Windsor Castle, to build a small theatre contiguous to that royal residence. There is every probability that this intention will now be carried out, and, with the usual celerity with which these matters are now managed, four months will complete the building. All the drawings of the internal arrangements were completed at the time.—*Court Journal.*

Monumental.—A meeting of the committee on the nature of the Hereford memorial of the late Sir George Cornewall Lewis have decided that the most appropriate testimonial will be a statue in bronze of the right hon. gentleman, within the railing in front of the Shirehall; and that Earl Somers, Col. Clifford, M.P., and other gentlemen named, be requested to act as a committee to make arrangements with Baron Marochetti, who states that he will erect a bronze statue for 1,000*l.*, and visit Hereford shortly to inspect the site and prepare a sketch of the statue.

Statues of Allan Ramsay and Professor Wilson.—Workmen have been excavating for the foundation of the statue of Allan Ramsay, which is to be erected at the north-east corner of West Princes'-street Gardens at Edinburgh. As it is intended that the statue, together with that of Professor Wilson, which is to occupy the north-west corner of the East Gardens, should form a group, with the Royal Institution as a centre, the site has been fixed in a line with that building; but, in consequence of the line falling some distance south of the upper terrace walk of the garden, the statue will have its foundation in the centre of the slope between the first and second walks—an arrangement which necessitates excavation to a considerable depth and masonry of the most substantial kind. The foundation will be laid 44 feet under the level of Princes'-street, and from this depth four walls of great strength will be carried up to the street level, where they will terminate in a platform surrounded by a balustrade of a quaint Scottish character, with corbelled turrets at the angles. On the centre of this platform the pedestal will be placed, leaving a space of about 3 feet wide all round. On the north side the platform will be connected with the garden walk by a light round-arched stone bridge. The pedestal will have light shafts at the angles, and three of its sides will be occupied by bas-reliefs portraits. The pedestal has been designed by Mr. David Bryce, R.S.A., and Mr. John Steell, R.S.A., is now engaged upon the medallions.

Benjamin Banks, the Stringed Musical Instrument Maker.—During the recent restoration and levelling of the now disused churchyard of Saint Thomas's parish, the grave-stone of Benjamin Banks, of Salisbury, the celebrated manufacturer of stringed musical instruments, who lived during the latter half of the last century, came to light. It appears that he died in 1795, but the inscription on the stone was so much worn and defaced, that within the last few days, according to the *Salisbury Journal*, a subscription has been raised (mainly through the exertions of Mr. C. J. Read), and the original inscription restored, with the following addition, "Restored 1863, in memory of the most eminent English Maker of Stringed Musical Instruments." It may be interesting to know that the maker in question was in the habit of marking his instruments, by means of printed tickets, pasted in the interior, which bear, in addition to his name, the words, "*Fecit, Salisbury*," and the year of their completion, the latter being generally supplemented in manuscript, whilst his name is usually stamped in two or more places, on the inner framework, and now and then on the outside also. His instruments have now become scarce and valuable, and are highly prized amongst professional men and amateurs; for, whilst Duke's violins are, it is stated, considered finer than those of "old" Banks, it is generally admitted that in the construction of tenors and violoncellos he has never been surpassed, by either Barac Norman, or Foster, for shape, tone, or appearance.

LANDLORD AND TENANT.—A question was ised at the Sheriff's Court, Red Lion-square, in e case "Sampson *v.* Marsland," respecting the ability of a tenant to repairs. The tenancy was r three years, and after the expiration certain pairs were done by the plaintiff, amounting to 3*l.* 10*s.* 10*d.*, as executor, and before the Court Chancery could allow them Mr. Dillon Webb, is attorney, was instructed to bring the action. he defence was that the house had not been deorated for seventeen years before it was taken, hd that the defendant was only liable for the lass broken, to 2*l.* 10*s.*, which he had paid into ourt. Mr. Metcalfe, the barrister for the plainff, submitted that his client had done the repairs, and that the defendant was liable. Mr. eadsden, for the defendant, insisted that he was nly liable for the damage to the glass. Mr. Inder-Sheriff Burchell held otherwise, and said a enant was liable if his agreement was to decorate ne premises, although there had been no decoration for twenty years. It was important that enants should know their liabilities. The jury, ecting on the dictum of the court, gave a verdict or the full amount, less the sum in court.

TENDERS.

For alterations and additions to the residence of Mr. Edward Budd, The Grange, near East Grinstead, Surrey. Mr. Alfred Smith, architect. Quantities supplied: -

Noakes	£3,686 15 1
Patman & Fotheringham	3,673 0 0
Elliot	3,521 0 0
Woodward	3,505 0 0
Colls & Co.	3,482 0 0
James & Ashton	3,322 0 0

For new Ragged Schools at Poplar. Mr. Jno. W. Morris, architect :—

Ward	£989 0 0
Watts	973 0 0
Sheffield	969 0 0
Salt	957 0 0
Hack	927 0 0
Atherton	915 0 0

For new stables, for the Woolwich Local Board of Health :—

Hiscock	£450 0 0
Wardell	399 0 0
Rebbel	369 0 0
Mills	362 11 0
Mesly	360 0 0
Bradv	359 0 0
Vaughan	340 0 0
Williams	319 0 0
Thompson (accepted)	298 10 0

For pulling down and rebuilding wall for the widening of Thomas-street, for the Woolwich Local Board of Health :—

Hiscock	£138 0 0
Wardell	129 0 0
Thompson	110 0 0
Vaughan	110 0 0
Mills	102 0 0
Woodford	98 15 0
Lonergan	95 0 0
Williams (accepted)	90 0 0

For building two houses in Temple Mill-lane, Stratford New Town, for Mr. W. H. Robinson. Mr. John M. Dean, architect :—

Jay	£795 0 0
Andrews	775 0 0
Wilson	770 0 0
Wood & Son	753 0 0
Davey (accepted)	550 0 0

For two small houses at Forest Gate, for Mr. E. Sandham. Messrs. Thos. & Wm. Stone, architects :—

Wilson	£395 0 0
Dyer	393 0 0
Jay (accepted)	373 0 0

For three houses in Chancery-lane. Mr. John Blyth, architect. Quantities supplied by Mr. H. S. Snell :—

Cannon (accepted)	£3,429 0 0

For County Police Station, at Hungerford, Berks. Mr. Joseph Morris, architect :—

Martin & Hoskings (accepted)	£952 0 0

For villa, at New Barnet, Herts. Mr. R. Plumb, architect :—

Belcher	£665 0 0
Miller	590 0 0
Page	517 0 0
Bray	510 0 0
Ginger (accepted)	497 15 0

TO CORRESPONDENTS.

"Going Along," being notes of a tour in Germany and Italy, will be continued in our next.

E. H.—A. S.—C. W. R. C.—W. G.—T. L. W. (no).—E. W. A.—Building Surveyor (Somerset House).—P.—W. H.—T. B.—J. E.—H. de M.—J. W. K.—F. L.—Mr. P.—G. S.—E. R.—C. & Sons.—E. R.—W. H.—C. R.—Cautious (next week).—E. C. O. (ditto).

We are compelled to decline pointing out books and giving addresses.

All statements of facts, lists of tenders, &c., must be accompanied by the name and address of the sender; not necessarily for publication.

Advertisements cannot be received for the current week's issue later than FIVE o'clock, p.m., *on* THursday.

NOTE.—*The responsibility of signed articles, and papers read at public meetings, rests, of course, with the authors.*

BENSON'S WATCHES, adapted for every class, climate, and country, wholesale and retail. Chronometer, duplex, lever, horizontal, vertical, repeating, centre seconds, keyless, astronomical, reversible, and chronograph watches, from 200 guineas to 3 guineas each. An Illustrated Pamphlet and Price List of every description of watch post free for two stamps.—J. W. BENSON, Manufactory, 33 and 34, Ludgate-hill; Branch Establishments, 46, 47, and 63, Cornhill.—[Advert.]

ADVERTISEMENTS.

The Publisher cannot be responsible for ORIGINAL TESTIMONIALS *left at the Office in reply to advertisements, and strongly recommends that* COPIES ONLY *should be sent.*

Early in December, price One Shilling.
THE BUILDERS' and MECHANICS' ALMANACK,
DIARY, and TRADE COMPANION,
For 1864.
Containing Illustrations and Articles on subjects of interest to Architects, Builders, Mechanics, Engineers, Inventors, &c. &c. and a Portrait of Alderman James C. Lawrence, President of the Builders' Benevolent Institution.
London: B. BLAKE, 421, Strand.

PRACTICAL MECHANICS' JOURNAL for NOVEMBER. Part 188. Price 1*s.* With Plate Engraving of Mr. Alex. Samuelson's Oil Mill Machinery, and Thirty Woodcuts.
Original Articles on The Northern Collieries.
Curtis's Screw Propeller.
Gun Cotton.
Ice-making Machines.
Plane Water Lines.
RECENT PATENTS:—Johnson, Hand Stamp; Kinder, Coating Lead with Tin; Cowley, Brick Machine; Johnson, Chlorine Bleaching Powder, Carbonate of Soda, Soda Ash and Sulphate of Iron; Blake, Labels for Luggage; Yates, Armour Plates; Littlebov, Ploughs and Ploughing; Johnson, Buoys; the Mechanic's Library.
Correspondence on American Ordnance Shells, Paddles heels, Propelling Carriages and Vessels, H. M. Steam Frigate "Arethusa."
Scientific Societies, Marine Memoranda, Monthly Notes, Lists of Patents and Designs, &c. &c.
London: LONGMANS, Paternoster-row; Editor's Offices (Offices for Patents), 47, Lincoln's-Inn fields.

8vo. price 10*s.* 6*d.* cloth.
YOOL on WASTE, NUISANCE, and TRESPASS, with reference to Remedies in Equity, Treating of the Laws of Timber, Mines, Lights, Water, Support, the Construction of Public Works, &c.
By GEORGE V. YOOL, M.A. of Lincoln's Inn, Barrister-at-Law, Late Fellow of Trinity College, Cambridge.
WM. MAXWELL, No 32, Bell-yard, Lincoln's-inn.

Now ready, SECOND SERIES of
RAILWAY CONSTRUCTION; with a PRACTICAL TREATISE on RAILWAYS in the EAST.
By W. D. HASKOLL, C.E.
Ninety one Plates of executed Works; Scale in French and English, 2 vols. imperial 8vo. 3*l.* 3*s.*; or the First and Second Series together, 4 vols. 3*l.* 3*s.*
ATCHLEY & CO. 106, Great Russell-street, London, W.C.

In the Press, a New Work, ready January, 1864,
MILITARY SURVEYING, including the PRINCIPLES of TOPOGRAPHICAL DRAWING. &c. Illustrated with Thirty-eight Plates and One Hundred and Sixty Woodcuts.
By CAPTAIN ZENDY, F.G.S. F.L.S. &c.
ATCHLEY & CO. 106, Great Russell-street, London, W.C.

NEW EDITION OF SALMON ON CONIC SECTIONS.
Now ready, in 8vo. price 12*s.* cloth,
A TREATISE on CONIC SECTIONS, containing an Account of some of the most important Modern Algebraic and Geometric Methods
By GEORGE SALMON, D.D. Fellow and Tutor of Trinity College, Dublin.
Fourth Edition, thoroughly revised and improved.
London: LONGMAN, GREEN, & CO. Paternoster-row.

THE ART-JOURNAL for NOVEMBER (price 2*s.* 6*d.*) contains the concluding portion of the Illustrated Catalogue of the Exhibition. Also line engravings from H. Warren's "Joseph's Coat brought to Jacob," by S. Smith; J. M. W. Turner's "Fishing Boats," by J. Cousen; and T. Allom's "Thyatira," by A. Willmore. The literary contributions include—"Bristol China: a History of the Pottery and Porcelain Works at Bristol," by Llewellynn Jewitt; "Benjamin West," illustrated with examples from his works, by James Dafforne; "Exposition des Beaux-Arts, appliqués à l'Industrie;" "A Substitute for Wood Engraving, Schulze's Process," illustrated; "History of Caricature and of Grotesque in Art," by Thomas Wright, illustrated; "A Descriptive Account of Thyatira," by J. C. M. Bellew; "Lord Stanley on Schools of Art;" "Exhibition at the Liverpool Institution of Fine Arts," &c. &c.
London: JAMES S. VIRTUE, 26, Ivy-lane.

THE QUARTERLY REVIEW, No. CCXXVIII. is published THIS DAY.
CONTENTS:—
I. PROGRESS OF ENGINEERING SCIENCE.
II. THOMAS HOOD AND HIS LIFE AND WRITINGS.
III. CO-OPERATIVE SOCIETIES.

JOHN MURRAY, Albemarle-street.

DR PERCY'S WORK ON METALLURGY.
Now ready, with numerous Illustrations, carefully drawn to Scale, 8vo. 21*s.*
METALLURGY: The Art of Extracting Metals from their Ores, and adapting them to various Purposes of Manufacture.
By JOHN PERCY, M.D. F.R.S. Lecturer on Metallurgy at the Government School of Mines
First Division.—Fuel, Fire-clays, &c.; Copper, Zinc, and Brass.
Also, just ready, by the same Author,
IRON and STEEL. Forming the Second Division of the above Work, illustrated with very numerous Engravings on Wood, executed to Scale from Original Drawings, with several large Lithographs.
JOHN MURRAY, Albemarle-street

TO ARCHITECTS
MR. CHARLES WARREN, Architectural Colourist,
No. 9, Portland-gardens, Notting-hill, London, W.

MR. ORMES would be happy to furnish ARCHITECTS with BILLS of QUANTITIES for their Designs. Address, 69, LEADENHALL STREET, E.C.

PARTNERSHIP.—WANTED, by a Young Gentleman, a SITUATION in a Builder's Office, with a view to a Partnership.—Address, F. W. 4, Elmore-street, Islington, N.

AGENTS WANTED.—The CALEDONIAN INSURANCE COMPANY (Established 1805 by Royal Charter and special Act of Parliament) is prepared to APPOINT additional AGENTS for either the Fire or Life Departments. Commission liberal.—Applications to be addressed to JAMES MUIR, Esq. Resident Secretary, Caledonian Insurance Office, 39, Lothbury, E.C.

CALCUTTA ROADS.—WANTED, a Practical ROAD MAKER, to take the superintendence of the making and repair of the roads, paths, and streets, Calcutta. A thorough knowledge of the laying, repair, and general management of the various descriptions of paved and macadam roads is required. A knowledge of brick making and burning is also desirable. None need apply who cannot furnish unexceptionable testimonials as to character and ability. The engagement is to be for five years, under an agreement received from Calcutta, copies of which can be obtained on application. Salary, 480*l.* per annum, to be increased to 600*l.* after twelve months' satisfactory service, with allowance for travelling expenses.—Application to be in writing, accompanied by copies of testimonials, to Messrs. W. THACKER & CO. No. 87, Newgate-street, London, on or before the 10th NOVEMBER next.

CABINETMAKER WANTED, accustomed to general country work. Wages 30*s.*—Apply, by letter, stating age and experience, to Dr. ROBERTSON, Sussex Lunatic Asylum, Hayward's Heath.

GOOD STAINED GLASS GLAZIERS WANTED, apply to WARD & HUGHES, 67, Frith-street, Soho-square, London, W.

TO WRITERS, &c.
WANTED, an experienced WRITER, on Glass, in Burnished Gold, &c.—Apply at W. BELL'S Glass Works, 43, High-street, Camden Town.

TO CARPENTERS.
WANTED, a Middle-aged Single MAN, for a large Establishment. His character must bear the strictest inquiry.—Apply, by letter, to W. F. care of Mr. Hodges, 17, Princes-street, Westminster.

WANTED, in a Builder's Office, a confidential PRINCIPAL CLERK. Salary, 100*l.* per annum.—Apply to FASSNIDGE & SON, Builders and Contractors, Uxbridge, Middlesex. Situation permanent to a suitable person.

TO MODELLERS.
WANTED, a Man to MODEL and MAKE MOULDS for Ornamental Terra Cotta. One who can fill up his time in modelling will be preferred.—Address, R. H. D. Office of "The Builder."

WANTED, PLASTERERS, CARPENTERS, JOINERS, and ONE STAIRCASE HAND.—Apply to W. BACKHURST, Builder, Eastbourne.

TO MARBLE MASONS.
WANTED, for a constancy, a sober and energetic MAN as above, who can cut letters.—Address, H. Office of "The Builder."

WANTED, for Three or Four Weeks, an experienced LAND SURVEYOR.—Apply by letter to W.M. HAYWOOD, Engineer's Office, Guildhall.

WANTED, as BOOKKEEPER, an active Young Man, who thoroughly understands the retail Timber and Saw-mill business.—Address, S. J. M. Post office, Gloucester.

WANTED, by a LONDON BUILDER, a thoroughly experienced ARCHITECTURAL DRAUGHTSMAN.—Address, stating particulars, age, where last engaged, and salary required, to X. M. N. Office of "The Builder."

WANTED, in a Builder and Contractor's Yard, a STOREKEEPER. Must have a knowledge of Ironmongery, and be able to measure timber, &c.—Apply to H. S. Office of "The Builder," stating age, where last engaged, and wages required. Must have an unexceptionable character.

WANTED, a Good PLUMBER, or Threebranch Hand, one that thoroughly understands closet and pump work. Good reference required.—Apply to Mr. CHAS. MILLS, Plumber and Decorator, 93, All Saints, Colchester

TO CLERKS.
WANTED, a good and expeditious WRITER, to make fair copies.—Apply, by letter only, stating age and previous employment, to WILLIAM CUBITT & CO. Gray's-inn-road.

TO BUILDERS, &c.
WANTED, by a Young Man, who has been at the trade four years, a SITUATION as IMPROVER in a Builder's Shop. Aged 22. Wages not so much an object as improvement.—Address, U. L. L. Office of "The Builder."

TO ARCHITECTS, &c.
WANTED, by the Advertiser, aged 23, a RE-ENGAGEMENT in an Architect's Office. Is a neat and expeditious draughtsman, and well acquainted with the usual routine of an office. Good references.—Address, B. A. care of Messrs. Buck & Wootton, 33, Mount street, Lambeth, S

TO MASTER PLUMBERS
WANTED, to APPRENTICE a YOUTH, aged 15 (who will leave school at Christmas), to the above trade, where he would have an opportunity of thoroughly learning his business. In door preferred, and premium given.—Address, F. J. ALSTON, 6, Queen street, Pitfield-street, N.

TO SURVEYORS, BUILDERS, AND OTHERS.
WANTED, by a Young Man, aged 23, a SITUATION as CLERK and BOOKKEEPER. Has a knowledge of land and building surveying, &c. Could assist at quantities, and understands the routine of the above offices. Good references.—Address, X. Y. Post office, Aylesbury.

WANTED, by a Young Man, a SITUATION as PLUMBER, PAINTER, and GLAZIER. Town or country.—Address, G. H. 6, Honour-street, Marylebone.

WANTED, by a Young Man, aged 22, a SITUATION as PAINTER, GLAZIER, and PAPERHANGER, or as Plumber's Improver. Can make himself generally useful. Can do a little plumbing. BURHAM BRICK, LIME, and CEMENT COMPANY, BURHAM WHARF, BELVIDERE-ROAD, LAMBETH.—The public are informed that the Company have taken the above Premises, and have ON SALE, GAULT BRICKS, TILES, POTTERY, DRAIN-PIPES, GREY STONE LIME, PORTLAND and other CEMENTS, and BUILDING MATERIALS of all descriptions. Architects and Builders are respectfully informed that goods of any pattern or description can be manufactured at the Company's Works, erected on the banks of the Medway by the late Thomas Cubitt. They would also call the attention of the public to the very superior quality of their Portland Cement.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr ROBERT WHITE, and which may be seen in operation at the Reigate fields of

J. B. WHITE & BROTHERS, Erith, Kent.

The advantages of the plan are two fold.

1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 35 to about 10 per cent of the total make, which in itself represents a large permanent saving.

2nd. The bricks are so much improved in colour and roundness as to give them a considerable additional value in the market over common stocks.

Licenses for use of the Patent granted to Brickmakers, on application to the Patentees, 17, Millbank-street, Westminster.

BRICKS.

For Estimates and Prices, &c. &c. apply to JOHN PILKINGTON, 15, Fish street-hill, London, E.C.
Country Builders supplied with Asphalte in Bulk for covering Footings, Barn Floors, &c. with instructions to lay it down.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter from Sir RAYMOND ARVIS, Bart VENTNOR, ISLE of WIGHT:—"2nd Castle Villa, 7 March 10th, 1862. In reply to your letter received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state with much satisfaction, it answers perfectly. Many builders and other persons have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."
N.B. From this testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD, CITY-ROAD, LONDON.

OCTAVIUS N. SIMPSON, STAMFORD;

and see Specimens at the Office of

Messrs. PINDER SIMPSON & SONS, 29, Savile-row, London, and at the Museum of Practical Geology, Jermyn-street, W.

This stone (which is a perfect colite), is raised in blocks of any workable size, and is about four feet thick in the bed. It will stand the WEATHER, is much used for water-works, and for the building or restoration of churches. When used as ashlar work it is not necessary to place it bed-ways. It may be worked with a tooth-saw, and is brought at a cheaper rate than any stone in the kingdom.

SLATES.—JONES & CO. have a STOCK

of SLATES of different sorts, from the best quarries in Wales. SLABS and CISTERNS delivered at any station in quantities of not less than five tons, from their depôts, Bangor, Garston, Saltney, Chester, and Gloucester.

Prices forwarded and estimates given on application.

BARTLETT, BROTHERS, & CO.

DEVONSHIRE WHARF, CAMDEN TOWN, N.W.

PATENT INDURATING SOLUTIONS,

For the Preservation of Stone, Cement, &c.;

PATENT SILICEOUS PAINT, FOR COATING BRICKS, CEMENT, &c.

FIRE-PROOF VARNISH,

For Internal Wood Work, Roofs, and Church Work generally. This Varnish renders Wood Uninflammable, and Preserves it from Decay.

THE FLUO-SILICIC STONE-PRESERVING COMPANY, LIMITED.

39, CHARING CROSS, S.W. & 12, COPTHALL COURT, THROGMORTON STREET, E.C.

PATENT FLUO-SILICIC INDURATIONS for the PRESERVATION of STONE, CEMENT, and other like materials. The Company apply to the surface of Stone, Cement, &c. a solution of Fluo-Silicic Acid, and Silicate of Potash. These are the only patents which embrace the use of that most valuable agent, Fluo-Silicic Acid. Bath, Caen, and other soft stones, when treated by the Company's solution, become extremely hard. The great expense of high ornament to buildings in hard stone has been an obstruction to Art; but since the Fluo-Silicic process can be applied as readily to soft stone after it is carved, that obstruction exists no longer. The Fluo Silicic at once permanently arrests the decay of all stone.—For further information apply to the Manager of the Company, Mr. DUDLEY, Architect, as above.

J. GURMAN,

Inventor and Patentee of a New SASH POCKET and Fittings,

For Weight and Balance Sashes, for Cleaning, Repairing, or Painting Windows.

They can be taken out in a minute, and replaced in same time. Old Windows can be altered.

ANY person allowed to work the Patent, on purchasing the Patent Pocket and other Fittings of the PATENTEE, 4, ONSLOW ROAD, Southampton; or of Mr. G. BRADBURY, 11, GARLICK HILL, Cannon-street, London, where Windows may be seen, and information obtained.

Also of the following Agents:

LIVERPOOL—Mr. T. C. OWEN, PRINCE'S BUILDINGS, NORTH JOHN STREET.
BRISTOL—Messrs CHILCOTT & GARDINER, IRONMONGERS, JOHN STREET.
NEWCASTLE-ON-TYNE—Mr. T. DUNN, IRONMONGER, GRAY STREET.
EDINBURGH—Messrs. BELL & SON, IRONMONGERS, FREDERICK STREET.
BRIGHTON—Messrs. LANGWORTHY & REED, IRONMONGERS.

Windows may also be seen at the Kensington Museum, London.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person. 5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.
CROGGON and CO.'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c. and
DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c. preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to

CROGGON and CO. 2, DOWGATE-HILL, London; and 2, GOREE PIAZZA, Liverpool.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent White lead under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,

Catalogues had at Mr. VIGERS'S Office, 3, Frederick's-place, Old Jewry; and of PULLEN, HORNE, & EVERSFIELD, 80, Fore-street, E.C. and 40, Parliament-street, S.W.

The New Metropolitan Meat and Poultry Market.—Second Clearance Sale.—Building Materials of various Houses and Premises in and near Smithfield.

PULLEN, HORNE, & EVERSFIELD respectfully announce that they are instructed by the Markets Improvement Committee of the Corporation of the City of London to SELL by AUCTION, on the PREMISES, on TUESDAY, NOVEMBER 10th, and following day, at TWELVE, in lots, all the valuable BUILDING MATERIALS, FIXTURES, and FITTINGS-UP of the RAM INN, and several dwelling-houses, shops, warehouses, and premises, situate on the north side of Smithfield, Smithfield bars, and Charter House-lane; comprising excellent stock bricks, oak and fir timber in roofs and floors, plain and pan tiles and slates, glazed sashes, doors, chimney-pieces, and interior fittings; flooring boards, folding gates, iron fronts, some fine old oak panelling, lead and copper flats, gutters and pipes, stone paving, cisterns, stoves, nests of drawers, counters, shelves, and other useful house and trade fixtures. May be viewed on Saturday and Monday previous. Catalogues had at the Architect's Office, Guildhall; and of PULLEN, HORNE, & EVERSFIELD, Fore-street, E.C. and 40, Parliament-street, S.W.

WEST TISTED, five miles from Alton, Hants.—To TIMBER MERCHANTS, RAILWAY CONTRACTORS, and OTHERS.—SALE of splendid LARCH and BEECH TIMBER, UNDERWOOD, and BAVINS.

MR. ELFORD has been honoured with instructions from Sir Alfred J. Doughty Tichb rne, Bart to SELL by AUCTION, at the NEW INN, West Tisted, on THURSDAY, the 12th, and FRIDAY, the 13th, of NOVEMBER, 1863, 4,500 fine LARCH TREES, of forty years' growth, in Colemoor Wood; 1,500 BEECH TREES, standing on New Copse, the Hangers, and the Warren; 32 acres of UNDERWOOD, and 20,000 LARCH BAVINS. The Larch will be all felled, and sold in lots of 50 in each lot, on Thursday, the 12th; the second Day's Sale will commence with the fine Beech Trees, standing on New Copse, near Colmore Wood, in lots of 50 each, with all the top and lop, continuing with 400 very fine trees in the Hangers, two and a half miles from Liss station, and 800 Beeches of similar size, in the Warren, adjoining the Hangers; two acres of Underwood in New Coppice, 15 acres in the Hangers, 5 acres in the Warren, and 20,000 Larch Bavins in Colemoore Wood, which, for the convenience of purchasers, will be sold in lots of 500 each. The Auctioneer can with the greatest confidence recommend this Timber, the larch from its great size and length, and the beech, which from the kind growth is well adapted for machinery and work of a superior class. To view, apply by letter to Mr. BURDUS, the Agent, at Selborne Cottage, Alresford, stating time and where to meet, who will send the proper party to show the different lots; or to the Deputy Agent, Mr. TREBLE, at the New Inn, West Tisted. Descriptive catalogues, with full particulars, will be ready a fortnight prior to the Sale, and will be sent by post on application to the Auctioneer, Basingstoke. Lunch will be provided at Twelve, and the Sale will commence each day at ONE punctually.

TO TIMBER MERCHANTS, CONTRACTORS, BUILDERS, CARPENTERS, JOINERS, and OTHERS.—VICTORIA WHARF and SAW MILLS, Victoria-road, on the Surrey Canal, nearly opposite the Victualling-yard, Deptford, and near the Deptford Station on the Greenwich Railway.

MR. PEAKE is favoured with instructions to SELL by AUCTION, on the PREMISES, as above, on TUESDAY, NOVEMBER 10th, 1863, and following day, at TWELVE for ONE o'clock each day precisely, the important STOCK-IN TRADE of some SEASONED GOODS, comprising 3,200 yellow deals, 1,500 white ditto, 2,000 yellow battens, 500 white ditto, 800 dry pine plank, 567 square of 3-inch yellow batten flooring, 300 square 2 inch ditto, 450 square 1½ inch ditto, 180 square of 4-inch white ditto, 80 loads of Swede timber, long lengths, 10 loads Baltic ditto, and 7 loads of American ash ditto. May be viewed the day preceding and morning of Sale. Catalogues obtained at the Wharf; at the Europa Tavern, Rotherhithe; and at Mr. PEAKE'S Office, 44, Tooley-street, Southwark.—Approved bills at four months will be taken for sums of 50*l.* and upwards.

ON MONDAY, NOVEMBER 2nd, at TWELVE for ONE.
CAMDEN TOWN, N.W.

MESSRS. LEREW & LEREW will SELL by AUCTION, at the YARD, Camden-terrace, a quantity of useful STOCK; viz. planks, deals and battens, dry cut stuff, prepared flooring, quartering, slating, battens, 2,500 feet of mahogany, 3,000 feet of wide pitch pine, 1,000 feet of 3-inch yellow deals, tenoning machine, ladders, &c. sundry pieces, ranges, stoves, old materials, &c.—Auction Offices, Cardington-street, Hampstead-road.

AUCTION SALE of CONTRACTORS' HORSES, at Margate, fresh from work on the Kent Coast Railway.—Messrs. Peto & Betts having completed the construction of the line, have instructed

MR. SHRUBSOLE to SELL by PUBLIC AUCTION, at the STABLES, Garlinge, near Margate, on THURSDAY, NOVEMBER 12th, 1863, at ONE o'clock precisely, SEVENTEEN fine young powerful HORSES, with weight at 11 mettle about them, and fit for works of a heavy character. The horses may be seen on the Works any time prior to the day of Sale; and at the Stables nights and mornings and on the Day of Sale. Descriptive catalogues of the horses may be obtained of THOMAS WHITE, Esq., Contractors' Office, Kent Coast Railway, Margate; or of Mr. STEPHEN SHRUBSOLE, Auctioneer and Valuer, Canterbury.

CHARING CROSS RAILWAY, CITY TERMINUS.—To BUILDERS, CONTRACTORS, PAVIORS, and OTHERS.

MESSRS. WILLIS & HARROW are favoured with instructions from the Contractor to SELL by AUCTION, in the Premises, on TUESDAY and WEDNESDAY, 10th and 11th NOVEMBER 1863, at ONE o'clock punctually, the Valuable and Useful BUILDING MATERIALS of Eight Houses in Hand court, two Dwelling houses and a Warehouse in Chequer-yard, three Dwelling houses in Dorgate hill, and four lofty Warehouses in Upper Thames-street, the whole of the property lying on the north side thereof), comprising, about 2,000,000 sound stock bricks, 30 tons of lead, in pipes and cisterns, plain pantiles and slates on roofs, excellent flooring boards, stout timber and joists, iron cramps, pile, sashes and frames, a number of loophole and other doors, pebble and other pitching, and a great variety of superior fixtures and fittings up.—May be viewed the day prior and morning of Sale, and Catalogues had at the Contractor's Office, Worcester-street, Southwark; on the Premises; and of Messrs. WILLIS & HARROW, 3, Newman's-court, Cornhill, E.C. and West Molesey, Kingston, Surrey.

HOLLOWAY.—Important Sale of Plumber's, Decorator's, and Gas fitter's Stock.

MR. THOMAS KING is instructed by Messrs. Cox & Cutler, who are dissolving Partnership, to SELL by AUCTION, at the PREMISES, No. 4, Lorraine terrace, Holloway road, THIS DAY (TUESDAY), NOVEMBER 3rd, 1863, and following day, without the least reserve, and the modern STOCK in TRADE, comprising panelled brasswork of every description, sheet lead, lead pipes, &c.; iron pieces of paperhangings, steel feet of plate, and a quantity of ornamental glass, varnishes, diamonds, brushes and tools, gas fittings, including 18 chandeliers; brackets and pendants, iron tanks, galvanized and other tubing, shop fixtures, builder's plant and stores, including ladders, scaffold boards, workmen's bench, range, register and other stoves, and a large number of useful articles. On view MONDAY preceding the Sale. Catalogues may be had on the Premises, and of Mr. THOMAS KING, Auctioneer and Surveyor, No. 1, Railway-place, Holloway road, N.

CLIVE VALE FARM, HASTINGS.—Eligible Freehold Building Land.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the HAVELOCK HOTEL, Hastings, on TUESDAY, NOVEMBER 10th, at FIVE for SIX o'clock in the evening, in fifty lots, the first portion of this most desirable PROPERTY, free of tithe, and land tax redeemed, situate near to Ore Church, with frontages to road leading from Hastings to Fairlight, and on the new roads called Alfred-road and Canute-road. The roads are for sed, and drainage will be provided by the vendors, so as to enable purchasers to commence building operations immediately. The situation is one of the most beautiful in the neighbourhood, within a mile of the town of Hastings, and commanding extensive views of the sea and surrounding country. The corner lot, with frontages to the road from Hastings to Fairlight and the Alfred road, is most eligible for the erection of a tavern, and is the only lot on this portion of the estate set apart for that purpose. Nine-tenths of the purchase-money may remain on mortgage or contract at 5 per cent to be paid in nine years by half-yearly instalments, but the whole or any part of the balance may be paid off at any time without notice.—Particulars, plans, and conditions of sale may be obtained ten days before the sale at the principal Hotels at Hastings; of Mr. E. J. BANE, Prospect-place, St. Michael's, Hastings; of Messrs. RUSSELL & DAVIES, 50, Coleman-street; and of the Auctioneer, 24, Moorgate-street, London, E.C.; of the Foreman on the Estate; and at the Place of Sale.

UNREDEEMED SALE.—ROMFORD, ESSEX.—To CARPENTERS, WHEELWRIGHTS, UPHOLSTERERS, and OTHERS.

MR. ALFRED SAVILL is instructed by the Executors of the late Mr. Stephen Collier, to SELL by AUCTION, on the PREMISES, near the Romford Union, on TUESDAY, NOVEMBER 10th, 1863, at TEN for ELEVEN o'clock, a large quantity of TIMBER; comprising oak, elm, and ash; quantity of dry planking, 700 good dry yellow deals and battens, stock of dry inch prepared floor battens, a quantity of seasoned laths, cattle and boards of various thicknesses, ditto capital wide pine ditto, 1,000 good dry spokes, 700 ash felloes, 2,000 feet of dry inch elm boarding, and a quantity of useful sawing, cutting, and other stuff. May be obtained at the Swan, Stratford; and at the Auctioneer's Offices, Chigwell and Romford.

AUCTION ROOMS, 13, HIGH HOLBORN.—TO BUILDERS, IRONMONGERS, &c.

MR. W. HOLLINGSWORTH will SELL by AUCTION, on MONDAY next, NOVEMBER 2nd, at TWELVE for ONE, the STOCK of a BUILDER'S IRONMONGER; expensive marble chimney pieces, useful spring cart, stoves, ranges, brass goods, and various effects. On view and catalogues ready. 13, High Holborn.

TO TIMBER DEALERS, BUILDERS, MASONS, AND OTHERS.—Extensive Sale of New Deals, Builders' Stock, and other Effects, Chelsea, on THURSDAY and FRIDAY, NOVEMBER 5th and 6th, at ONE o'clock each day.

F. HALL & SON will SELL by AUCTION, on the PREMISES, Milner-street, Chelsea, opposite Stanley-street, and near the Australian Tavern (where it is intended to let 5 or 10 periodical sales) as above, about 1,000 prime yellow deals, planks and battens (cut and uncut), 300 squares of flooring, 10,000 feet of quartering, drain pipes, stone in blocks and landings, stone paving, &c., and 6 panel doors, blocks and falls, large quantity of useful old materials removed from various contracts, chimney pieces, stained glass with vine, wrought-iron 15-in Cocker ball, suitable for greenhouse, 4-inch wheel, coal waggon, stoves, fine tallboys, half a ton of white lead, a useful brown mare and harness, old iron, firewood, and other effects.—May be viewed two days previous, and Catalogues had on the Premises; and per post of the Auctioneers, Kennington, S.

BROMFLEET, containing valuable beds of Red and White Clay for Bricks.—TO BE SOLD by AUCTION, by

MR. ROBERT BROWN, at BOWMAN'S HOTEL, Howden, on FRIDAY, the 13th day of NOVEMBER, 1863, at THREE o'clock in the Afternoon, subject to such conditions as shall be then produced, all that Moiety of the MANOR of BROMFLEET, containing about 1,200 acres; also all that well-built FARM-HOUSE, with convenient and suitable out-buildings; also all those several Closes and Parcels of Land, nearly opposite Station 178 miles 2 roods 38 perches, or thereabouts, 141 acres, 0 roods, 32 perches of which are rich pasture and meadow land, and 37 acres 2 roods 6 perches are arable, and which will be sold in lots. Part of the Estate adjoins the river Humber and the Market Weighton Canal. The Hull and Selby Railway runs through Broomfleet, and a market train stops there. The Staddlethorpe station is within three miles. Broomfleet adjoins Wallingfen, and there are valuable beds of clay in some of the lots, which adjoin the Market Weighton Canal and are between Wallingfen and the outlet into the Humber. Plans have been made in these lots. On boring in one lot to the depth of 26 feet 6 inches, the clay was found to be 17 feet 6 inches in thickness, and of a superior quality for red bricks; and 8 feet 6 inches in thickness, and of a superior quality, for white bricks. On boring in another lot to the depth of 28 feet 6 inches, the clay was found to be 24 feet in thickness, and of a superior quality for red bricks.—Mr. MARMADUKE SCUTT, one of the tenants, will show the Estate; and further particulars may be had on applying to SAMUEL VESSEY, Esq., Manor House, Halton, near Spilsby; Mr. ROBERT BROWN, of Howden, the Auctioneer; or at the Offices of Messrs. ENGLAND, SAXELBYE, & ROBERTS, Solicitors, Quay-street Chambers, Hull.

SALE by TENDER.—In consequence of the Directors of the Port of Portsmouth Floating Bridge Company having entered into a contract for the construction of a larger bridge, the original IRON FLOATING BRIDGE, with her Engines and Machinery, as she now lies at her moorings at Gosport, will be SOLD by TENDER. Tenders to be made in writing, addressed to the Clerk of the Company (of whom further particulars may be had on application), at his office, 26, Clarence-square, Gosport, and endorsed, "Tender for Purchase of Bridge," on or before the 11th NOVEMBER, 1863. The Directors do not bind themselves to accept the highest or any Tender.—By order of the Directors,
WILLIAM F. BURRELL, Clerk to the Company.

Portsmouth, 15th October, 1863.

FARNBOROUGH and ALDERSHOTT FREEHOLD and GROUND-RENT SOCIETY (Limited).—To BUILDERS and OTHERS.—Land on this Society's Estate at Farnborough, TO BE LET on building leases, or TO BE SOLD, upon advantageous terms.—Particulars may be had of the Architect, Mr. H. CURREY, 4, Lancaster-place, Strand, W.C.; or at the Offices of the Society, 18, New Bridge-street, Blackfriars.
EDWARD CHATFIELD, Managing Director.

KEYNSHAM BLUE LIAS LIME and CEMENT WORKS, SOMERSET.—TO BE SOLD by PRIVATE CONTRACT, by order of the Liquidator, the newly-formed FREEHOLD WORKS, occupying a site of 7a. 2r. 26p. or thereabouts. The existing kilns and ovens are capable of producing 70 to 80 tons of lime and 150 tons of cement weekly, both products having been approved by large contractors and eminent architects, the cement being used in many of the Government fortifications now in progress. The buildings are very substantial and the machinery of the best description, driven principally by water power, but with steam power as auxiliary. Coals are supplied to the works at a very low price, and the Great Western Railway Station is within a short distance.—For further particulars apply to Messrs. N. LINDO & SONS, Solicitors, 47a, Moorgate-street; of F. MAYNARD, Esq. Liquidator, 19, Bread street, Cheapside; and of Messrs. FULLER & HORSEY, 13, Billiter-street, London.

FREEHOLD MILLS, with good water power, Keynsham, Somerset, well adapted for corn mills, oil mills, or paper mills, TO BE SOLD. Apply to Messrs. FULLER & HORSEY, Billiter-street, London, E.C.

ELIGIBLE FREEHOLD BUILDING LAND, in KENT, within one mile of two stations on the North Kent Railway, and thirty minutes' ride thence to London Bridge and Charing-cross.—TO BE LET or SOLD, in large or small plots, from TEN to TWENTY ACRES of MEADOW LAND, on the high London road to Erith, admirably adapted for gentlemen's residences and villas, delightfully situated, with fine views of the country and River Thames, near a church, gravelly soil, good water and gas laid down. Ground rent moderate.—Apply to Mr. DAVENPORT, Land and Estate Agent, 35, Bucklersbury, City, E.C.

BATTERSEA.—Between Clapham and Battersea Park.—To BUILDERS and OTHERS.—LONG HEDGE FARM ESTATE TO BE LET on BUILDING LEASES direct from the Freeholders, at moderate ground rents. This property lies on either side of the Queen's-road extension, Battersea to Clapham, and immediately adjoining the Works of the London, Dover, and Chatham Railway Company, and the Wandsworth road and Station, where houses are in great demand. Roads and Sewers now forming. The Low-level Sewer in course of construction will effectually drain the whole of this district.—For plans and further particulars apply to Messrs. COVERDALE, LEE, COLLYER-BRISTOW, & WEIGHELL, Solicitors, 4, Bedford-row, W.C.; to Mr. CHARLES LEE, 20, Golden-square; or to Mr. R. J. WITHERS, 51, Doughty-street, W.C.

GROUND in BASINGHALL-STREET, now occupied by Houses and Warehouses, known as Nos. 20 and 21, Basinghall-street, TO BE LET by TENDER, for Building purposes. A plan of the ground and form of Tender may be obtained at the Offices of EDWARD DAWSON, Esq., No. 74, Lawrence Pountney-hill, Cannon-street; or of Messrs. HOLLINGSWORTH, TYERMAN, & GREEN, No. 24, Gresham-street, London; where Tenders, under seal, are to be delivered on or before the 1st DECEMBER next. The Owner does not bind himself to accept the highest or any Tender.

BUILDING LAND, Ealing.—TO BE LET, in plots, direct from the freeholder, for Villas.—This estate is within 100 yards of a station, at which more than fifty trains stop daily, and abutting on the high road. Its most important feature is, that on the completion of the Finsbury Extension of the Metropolitan Railway, this site will be actually within half an hour of the Bank of England. The subsoil is gravel, and the roads and sewers are made.—Particulars of Messrs. GRAY & BERRY, 108, Edgware-road; or Mr. JONES, Architect, Ealing, W.

ON the High Road between Staines and Feltham.—TO BE LET, with immediate possession, a first-class BRICKFIELD, which for the last five years has been most successfully worked by Mrs. Burchett & Son. The field contains a great quantity of unexhausted brick earth of first quality. Bricks are in great request in the neighbourhood, and it offers a first-rate opportunity to a man of business. The field abuts to the Staines and Wokingham Railway, to which there is no doubt a siding could be obtained. For further particulars, apply to Messrs. S. HEDGE & CO. Timber Merchants, Staines.

TO BE LET, by the Fishmongers' Company of London, on a Building Lease for Eighty Years, valuable BUILDING LAND, Newington, Surrey, within three minutes' walk of the Elephant and Castle. About Three-quarters of an Acre of Ground, situate on the east side of the Walworth road, having a frontage of 105 feet in Crown-row, and a frontage of 193 feet 6 inches in Prospect-row, with Eighteen Cottages in the rear of Williams-place. This property is well adapted for shops and business purposes, requiring space and ready access to the principal thoroughfares of the metropolis. TO BE LET by TENDER, in one or more lots, to suit the views of different parties wanting the ground. Apply to Mr. W. B. TOWSE, the Company's Clerk, Fishmongers' Hall, London Bridge; or to Mr. RICHARD SUTER, the Company's Surveyor, 28, Finsbury-place, E.C. where plans and particulars may be seen. The Tenders are to be sent in by TUESDAY, NOVEMBER 24th next, at NOON precisely.
Fishmongers' Hall, October 20, 1863.

TO BE LET, a GOOD DWELLING HOUSE, with Yard and large extensive Premises, suitable for a Timber-yard, Builders, Manufacturer, or others with workshops.—Inquire at the Duke of Clarence, Vauxhall-street, Upper Kennington-lane, Lambeth.

WATFORD, HERTS.—TO BE LET, on BUILDING LEASES, several PLOTS of FREEHOLD LAND, in the neighbourhood of the above town, in close proximity to the Station, and at the new road recently made.—For plans and particulars apply to Mr EDWARD H. BURNELL, Surveyor, 32, Bedford-row, London, W.C.

EXTENSIVE MANUFACTURING PREMISES, with STEAM POWER.—TO BE LET, one of the finest BUSINESS PREMISES in the City; containing large yard, with drying shed, piling stage, extensive Workshops, fitted up with useful saws, planing machines and tenoning machines for making doors, &c.; three vertical saw frames for cutting deal planks, &c. 26 inches deep; two powerful steam engines, with hot water tank; a well of good water, and joiners' benches, together with every convenience for a large trade: public and private offices, fitted with fire-proof safes, &c. For further particulars apply at the City Timber Yard, 20, Long-lane, City.

WANTED, FREEHOLD BUILDING LAND, within five miles of London or Westminster Bridge, in plots of from 1 to 30 acres.—Address, with particulars, to W. E. K. Office of "The Builder."

TO ENGINEERS, HOT-WATER APPARATUS MANUFACTURERS, IRONMONGERS, &c.—TO BE DISPOSED OF, by PRIVATE CONTRACT, in consequence of the death of the proprietor, the LEASE and GOODWILL, together with the STOCK, PLANT, &c. of a business established upwards of forty years, having a connexion with Government and several public establishments. As the capital required is small, it presents an eligible opportunity to any one desirous of entering into this branch of trade. Apply to Mr. A. S. EDMUNDS, Solicitor, 11, St. Bride's-avenue, Fleet-street.

NEAR PORTMAN SQUARE.—To Builders, House Decorators, and Others.—TO BE DISPOSED OF, an old established BUSINESS, together with the Lease of very eligible Premises, held at a low rent, and well situated in one of the best streets of the above locality.—For further particulars apply to Mr. ALDERTON, House Agent, 47, Park street, Grosvenor square, W.

TO STONE and MARBLE MASONS.—TO BE DISPOSED OF (in consequence of the death of the late proprietor), the old-established BUSINESS of a STONE and MARBLE MASON, carried on in Carr-street, Ipswich. Beside the yard, workshop, and machinery, there is a commodious dwelling-house, with convenient counting-house, and two extensive chapel residences, all in good repair. The premises may be held on lease, with immediate possession, at a moderate rent, or advantageously purchased. For particulars, apply to Mr. FARROW, Builder, Bury St. Edmond's; or to Mr. GEO. FARROW, Builder, Cement Works, Ipswich.

TO BUILDERS and OTHERS.—TO BE SOLD, a lucrative and respectable BUILDING BUSINESS, situate in a most thriving town in the county of Somerset. The above business has extensive connexions. The sole reason of the proprietor relinquishing it is the fact of his numerous other engagements preventing his personal superintendence of the branch. The stock and plant, which is light, to be taken off at a valuation in the usual way. With the business may be rented or purchased, if required, a capital and commodious dwelling house, with every convenience, workshops, storerooms, yards, offices, &c necessary for carrying on a first-class business. For further particulars apply to Mr. WM. CRUSE, House and Estate Agent, Glastonbury, Somerset.

TO SEWER-BUILDERS, BARROW-MAKERS, PACKING-CASE MAKERS, &c. &c.—30,000 to 40,000 feet super. 1-inch and 1½-inch ELM BOARD, suitable for the above trades, TO BE SOLD cheap.—Can be seen at GEO. WOOD'S Timber Yard, Farnham, Surrey, about 41 miles from Esher Station, in the South Western Railway.

London: Printed by CHARLES WYMAN, Printer, at the Printing-office of Cox & Wyman, Nos. 74 and 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," No. 1, York-street, in the Parish of St. Paul, Covent-garden, both in the County of Middlesex.—Saturday, October 31, 1863.

NOTICE.

BROWN & GREEN'S KITCHEN RANGE

WAREHOUSE is now REMOVED to the NEW PREMISES, 72–74, Bishopsgate-street Within, a few doors from the late Address, at No. 81. There may be seen commodious fixtures for a still larger stock of their Patent Prize Medal Ranges and Stoves, Register Grates, and Cooking Utensils, to meet the great public demand; and also for the consequent extensive execution, by the manufacturers themselves, of all descriptions of hot water, bath, laundry, and steam work.

72–74, Bishopsgate street Within, November, 1863.

BILLING'S PATENTS.—

CHIMNEY TERMINALS, THROAT VALVES.

NOTICE TO ARCHITECTS The Proprietors of the late Mr Billing's Patents have secured the services of Mr. H. H. COLLINS, M.I.B.A., of No. 10, Pounds, E.C. as the Consulting Architect, to whom they refer for information as to their scientific application of the same—Estimates and the reduced prices may be obtained from the Manager, Mr. TYLER, 12, Abingdon street, Westminster, S.W.

CONTRACTS.

BOSHAM MUDLAND, SUSSEX.—RECLAMATION of MUDLAND.—ERECTION of SEA WALL To CONTRACTORS and Others.—Notice is hereby given, that it is intended to RECLAIM from the SEA all that tract of MUDLAND, known as BOSHAM CREEK, situate at Bosham, Sussex, and also to restore the Sea Wall or Embankment there situate The Works are to be performed in accordance with certain drawings and specifications which may be seen at my Office in and after the 10th NOVEMBER next, and under the direction of JAMES BRUNLEES, Esq of 5 Victoria street, Westminster, Civil Engineer Tenders to be sent to me on or before the 10th day of DECEMBER next.

R. G. RAPER, Chichester, Steward of the Manor and Hundred of Bosham, Sussex.

TO BUILDERS. — Persons desirous of CONTRACTING for the REPAIR and RE-FITTING of the PARISH CHURCH of TENTERDEN, in the County of Kent, are informed that the plans and specification may be seen on and after NOVEMBER 9th, by application to the Vicar at Tenterden, or the Architect, in London. Tenders to be delivered at the Office of the Architect, EWAN CHRISTIAN, 8a, Whitehall-place, London, S.W. on or before DECEMBER 8th, 1863. The Committee do not bind themselves to accept the lowest Tender, and good and sufficient security will be required for the due performance of the works.

CONTRACTS.

WAR DEPARTMENT CONTRACT.
NOTICE TO BUILDERS.

TENDERS are required for IMPROVING the DRAINAGE of the POWDER MAGAZINE ESTABLISHMENT at Marchwood, in the County of Hants.

Parties desiring to Tender for the execution of these works must leave their names at the Royal Engineer Office, Gosport, on or before the 9th NOVEMBER, 1863, and pay the sum of 10s. 6d. for the bills of quantities, which will be forwarded to each party as soon as prepared.

The Secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, Portsmouth, 27th October, 1863.

WAR DEPARTMENT CONTRACT.
NOTICE to BUILDERS.

TENDERS are required for the CONSTRUCTION of a SEA WALL, PLATFORM, and BUILDINGS, for a double line of Magazine Railway, at Paddy's Hard, in the County of Hants.

Parties desiring to Tender for the execution of these Works must leave their names at the Royal Engineer Office, Gosport, on or before the 9th NOVEMBER, 1863, and pay the sum of 10s. 6d. for the bills of quantities, which will be forwarded to each party as soon as prepared.

The Secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, Portsmouth, 27th October, 1863.

WEST HAM LOCAL BOARD of HEALTH.—To BUILDERS.—Notice is hereby given, that the Board of Health for the District of West Ham, in the County of Essex, are prepared to receive TENDERS for the ERECTION of TWO COTTAGES, on their land at Canning Town, joining the new Sewage Outfall Works.—Conditions of Contract, forms of Tender, and any other information, may be obtained at the Office of the Local Surveyor, at Rokeby House, in Stratford. Tenders are to be delivered at the said Office, at Rokeby House, not later than MONDAY, the 9th NOVEMBER, and each of them must contain a ten pound Bank of England note, endorsed by the party Tendering, to be returned in the event either of the Tenders not being accepted, or on the completion of the contract or bond. By order of the Board,

CHARLES WILSON, Clerk.

Rokeby House, Stratford, E. October 21, 1863.

METROPOLITAN BOARD of WORKS.
THAMES EMBANKMENT, MIDDLESEX SIDE.—To BUILDERS, CONTRACTORS, and OTHERS.—The Metropolitan Board of Works, hereby give notice that they will meet at the Office of the Board, spring-gardens, S.W. on FRIDAY, the 27th day of NOVEMBER next, at TWELVE o'clock at noon precisely, and will then be prepared to open TENDERS by parties who may be willing to CONTRACT for the CONSTRUCTION, COMPLETING, and MAINTAINING in REPAIR for Twelve calendar months, the following WORKS, that is to say:—A certain intended Embankment Wall, 1,370 feet in length, or thereabouts, with certain Landing-places, Steps about pier, sewers, subway, Storm outlets, and other works in connexion therewith, situate in and adjacent to the foreshore of the River Thames, on the Middlesex side, between Waterloo Bridge and the Eastern end of the Temple-gardens. Parties desiring to submit Tenders may, on and after WEDNESDAY, the 14th inst. upon payment of 10l. 10s. obtain plans, sections, specifications, form of Tender, and other particulars on application to Mr. J. W. BAZALGETTE, Engineer of the Board, at the Office, Spring gardens, between the hours of NINE a.m. and FOUR p.m. or on Saturdays between the hours of NINE a.m. and TWO p.m. until THURSDAY, the 26th day of NOVEMBER next. The Tenders are to be addressed to the Clerk of the Board, and must be delivered at this Office before FOUR o'clock on the last-mentioned day, and no Tender will be received after that hour. The parties Tendering must be in attendance at the Board at TWELVE o'clock on the day appointed for opening Tenders. The Board do not bind themselves to accept the lowest or any Tender, and the party whose Tender shall be accepted will be required to provide two or more approved sureties for the due and satisfactory performance of the works

JOHN POLLARD, Clerk of the Board.

Spring-gardens, S.W. October 3, 1863.

SURVEY and VALUATION of the PARISH of RICKMANSWORTH, HERTS, for the purpose of PAROCHIAL ASSESSMENTS. The Board of Guardians of the Watford Union are desirous to receive TENDERS for a SURVEY and VALUATION (without making a Plan) of the HOUSES, MESSUAGES, LANDS, and other HEREDITAMENTS, liable to Poor Rates, in the said Parish of Rickmansworth, to be carefully and accurately made and fairly written in a paper book, with the several values and particulars of the several houses, buildings, and appurtenances, and each field, close, and parcel of land, and of such other hereditaments as aforesaid, distinguished and set forth therein, according to and as indicated in the form of a schedule to be had of me, such survey and valuation to be completed, and such book to be perfected and finally and securely bound and delivered, with proper indexes, to me on or before the 2nd of FEBRUARY, 1864, at the rate of Ten Pounds per Hundred "Rateable Value" (or Survey and Valuation of Rateable Value) "worth Parish," to be sent to me on or before TUESDAY, the 24th day of NOVEMBER next. The Tenders will be opened at a Board Meeting, to be held at the Watford Union Workhouse, on WEDNESDAY, the 25th day of NOVEMBER next, when parties tendering will be expected to attend the Board at ONE o'clock precisely. The Guardians will not pay any travelling or other expenses that any Tenderer may incur in attending to accept the lowest or any other Tender. References and testimonials may be transmitted with the Tenders.—Conditions for information to be addressed to me,

RICHARD PUGH, Solicitor, Watford,
Watford, Oct 28th, 1863. Clerk to the Board.

TO BUILDERS and CONTRACTORS.—TENDERS are required for ERECTING three HOUSES at Kingsland, N.E. Plans and particulars to be seen daily at the Office of the Architect, Mr. WILLIAM PAICE, 11, Great James-street, Bedford row.

CONTRACTS.

WEAR NAVIGATION and SUNDERLAND DOCK ACT, 1859.—To CONTRACTORS.—The River Wear Commissioners are prepared to receive TENDERS for the CONSTRUCTION of a WEIR DOCK and INCLINES, and other Works connected therewith, at the South Docks, Sunderland, in conformity with drawings, specifications, and conditions, which may be seen, and further particulars obtained, upon application to THOMAS MEIK, Esq., C.E. Engineer's Office, Harbour and Dock Works, Sunderland, on and after the 9th of NOVEMBER, 1863. Engineer's Office, Harbour and Dock Works, Sunderland, on and after 9th NOVEMBER, 1863. Tenders, on printed forms, attached to specification, which only will be received, and enclosed under sealed covers, addressed to the "Chairman of the Executive Committee, River Wear Commissioners," to be delivered at 18, Fawcett-street, Sunderland, not later than NOON, on the 14th DECEMBER, 1863. Copies of the Specification and Conditions, with Form of Tender, can be had by parties tendering, on payment of 2l. 2s. The Commissioners do not bind themselves to accept the lowest or any Tender. By order,

J. S. ROBINSON, Clerk to the Commissioners.

Sunderland, October 28, 1863.

WEAR NAVIGATION and SUNDERLAND DOCK ACT, 1859.—To CONTRACTORS.—The River Wear Commissioners are prepared to receive TENDERS for the CONSTRUCTION of a SEA WALL, or PIER, and other Works in connexion with the North-East Pier at the South Outlet of the South Docks, Sand Hills, in conformity with drawings, specification, and conditions, which may be seen further particulars obtained, upon application to THOMAS MEIK, Esq., C.E. Engineer's Office, Harbour and Dock Works, Sunderland, on and after 9th NOVEMBER, 1863. Tenders, on printed forms, attached to specification, which only will be received, and inclosed under printed covers, addressed to the "Chairman of the Executive Committee, River Wear Commissioners," to be delivered at 18, Fawcett-street, Sunderland, not later than NOON on the 14th DECEMBER, 1863. Copies of the specification and conditions, with form of Tender, and of a bill of quantities, prepared for the convenience of contractors, can be had by parties tendering upon payment of 2l. 2s. The Commissioners do not bind themselves to accept the lowest or any Tender. By order,

J. S. ROBINSON, Clerk to the Commissioners.

Sunderland, October 28, 1863.

BUILDERS and CONTRACTORS desirous of TENDERING for the ERECTION of a STATION, &c. at the Suttton Junction of the Banstead and Epsom Downs Railways, may see the plans and specifications at the Offices of Mr CHARLES J. SE, St. George-street, Westminster. Tenders to be sent in before TWELVE o'clock on the 16th inst.

TO ROOF CONTRACTORS.—HAILEYBURY COLLEGE.—TENDERS are required for GALVANIZED IRON ROOFS to SIX TANKS COURTS, also for TIMBER ROOFS, ENGINE HOUSE, at Haileybury College. Hertford. Parties willing to Tender may see the plans, sections, and specification, and obtain forms of Tenders, at the Office of JOSIAH JOSEPH FAIRBANK, C.E. 2, Parliament-street, Westminster, S.W. on and after the 2nd of NOVEMBER until 10th NOVEMBER, from TWELVE to FOUR o'clock Tenders, endorsed "Tender for Roofs," addressed to the Rev. Henry Hatchett, Haileybury College, Hertford, to be sent in on the 12th NOVEMBER. The lowest or any Tender will not necessarily be accepted.

2, Parliament street, Westminster, November 1, 1863

TO TUCK POINTERS.—Immediate TENDERS are invited for the EXECUTION of a very large quantity of TUCK POINTING in the county of Suffolk. Tenders to be sent, stating the price per yard, including joints raked, clean, colour, flat point, red or white, and white tuck-point brickwork.—Address to Mr KENNALL, Builder, Bury St. Edmunds, with reference where similar works have been executed. N.B.—Ladders and scaffolding will be supplied.

[For remainder of Contracts see next Page.

CONTRACTS.

TORQUAY HOTEL COMPANY (Limited).
To BUILDERS.—The Directors of the Torquay Hotel Company (Limited) are willing to receive TENDERS for an HOTEL to be ERECTED at The Cape, Torquay, from the designs of the Architect, E. N. CLIFTON, 17, St. Helen's-place, Bishopsgate-street, London. Copies of the specification may be obtained of Messrs WILLIAMS & SCHOFIELD, 12, Montague street, Russell square, London, W.C. upon depositing with them the sum of five guineas, which will be returned after the delivery of the Tenders. The Directors do not bind themselves to accept the lowest Tender. The Directors will require the Builder whose Tender is accepted to give the names of two sureties, to be bound jointly with himself in the sum of 3,000l. for the due execution of the works.—By order of the Board.
E. N. CLIFTON, Architect of the Company.
17, St. Helen's-place, Bishopsgate-street, London,
7th October, 1863.

TO BUILDERS.—TENDERS are required for the ERECTION of a SCHOOL-ROOM and RESIDENCE at Amersham, Bucks. Plans and specification may be seen on application to G. ISAACSON, Esq. Solicitor, Amersham. The Committee do not pledge themselves to accept the lowest or any Tender.

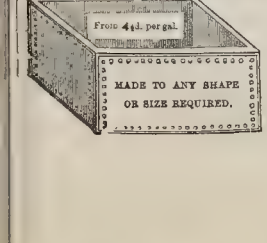
THE LONDON
WARMING AND VENTILATING COMPANY
LIMITED,
26, GREAT GEORGE-STREET, Westminster, S.W.
MANAGER, MR. WOODCOCK.

Churches, Greenhouses, Offices, and Buildings of every description warmed by means of a modification of the plans successfully used during the last five years by Mr. Goldsworthy Gurney in both Houses of Parliament.

Steam, Hot Water, Gas, and in open or enclosed fire-places, Coal and Coke, are equally available for the process.

The cost is less and the effect greater than that of any other known Plans.



The Horticulturalist will find herein an instrument of new and important powers.

The Apparatus may be seen in operation in ST. PAUL'S CATHEDRAL, the various offices of the "Department of Science and Art," and at the Architectural Societies' House, 9, Conduit street, Regent-street

BUILDINGS AND SHIPS EFFECTUALLY SECURED AGAINST LIGHTNING.
PATENT LIGHTNING CONDUCTORS,
according to the system of Sir Snow Harris, F.R.S. as now universally adopted in every department of the Public Service, supplied and carefully fitted in every detail, under the immediate instructions of Sir Snow Harris, by C. W. GRAY, who has effectually secured a large number of ships, public buildings, and magazines against the destructive agency of lightning, including the Houses of Parliament, magazines, afloat and on shore, of the War Department and many churches and other important structures. Buildings surveyed, and plans and estimates submitted, if called for
J. W. GRAY & SON, 114, Fenchurch-street, E.C.

BROWN & GREEN'S
PATENT KITCHEN RANGES.
PRIZE MEDAL, 1862.

These Ranges combine the latest improvements with great simplicity and durability. They afford facility for roasting meat in front of the fire without interruption to the action of the oven, hot plate, boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, and

CURE OF SMOKY CHIMNEYS,

these Ranges are unequalled. They are of all sizes and prices; and when fitted with Bath and Steam Apparatus, &c. they form the most complete appointment for good establishments. Designs, &c. may be had on application at THE LONDON WAREHOUSE,

72—74, BISHOPSGATE STREET WITHIN.

"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept 6, 1862.

EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND.

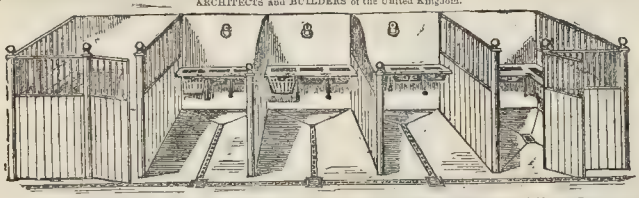
MUSGRAVE'S PATENT STABLE and HARNESS FITTINGS.

MUSGRAVE'S PATENT HARMLESS LOOSE BOXES.

MUSGRAVE'S PATENT IRON COW STALLS and PIGGERIES.

Architects who have not seen these fittings are requested to write for engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition.

They can be seen in first-class stables in almost every county in England; and MUSGRAVE, BROTHERS, are now fitting several very large establishments under direction of London architects, noted for employing only what is the best of its kind.

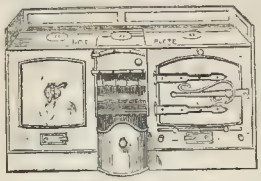


Musgrave's Patent Slow-combustion Stove

Is the nearest approach to Warming by Hot Water. It will burn in churches from Saturday till Sunday evening, without attention during the hours of worship. In halls will burn day and night for weeks, with little care. Capable of warming a large apartment for twenty-four hours, at a cost of 3d.; and deserving of special attention because of its safety, healthfulness, durability, and extreme simplicity.—For full particulars apply to

MUSGRAVE, BROTHERS, Ann-street Ironworks, Belfast.

BARTON'S PATENT PRIZE MEDAL STABLE FITTINGS
AND ENAMELLED MANGERS.



These SUPERIOR-CLASS STABLE FITTINGS are PATRONIZED by the PRINCIPAL NOBILITY, and ADOPTED by many of the FIRST ARCHITECTS and BUILDERS of the United Kingdom.

J. BARTON solicits attention to the NEW STABLE just completed, with full size Stalls, Loose Boxes, and Harness Room, now open for inspection, at the Manufactory, 370, Oxford-street, where an extensive assortment of all kinds of Stable Furniture, upon the most modern and improved principles, are to be seen.

A new Illustrated Catalogue, with numerous engravings of the improved method of fitting up Stables, forwarded on receipt of four stamps.

JAMES BARTON, IRON WORKS, 370, OXFORD STREET, LONDON, W.

THE LEAMINGTON PRIZE KITCHENER.

These Ranges are strongly recommended for Economy, Cleanliness, and a Cure for Smoky Chimneys.

The Top forms an entire and efficient Hot Plate, and having an Open Fire, removes all the objections of a Close Fire-range.

2, WINSLEY-STREET, OXFORD-STREET, LONDON, W.

PATENT WORCESTERSHIRE RANGE.

PRIZE MEDAL 1862, AWARDED FOR EXCELLENCE.

The above RANGE is most complete, and strongly recommended for its unrivalled ECONOMY, CLEANLINESS, CONVENIENCE, DURABILITY, and is a certain CURE for SMOKY CHIMNEYS.

It is an entirely new invention, and consists of large MEAT ROASTER, PASTRY OVEN, and WROUGHT IRON BOILER. The top forms a HOT PLATE for BOILING, STEWING, &c. The whole heated by ONE SMALL FIRE. One 5 feet wide is equal to an ordinary Range 8 feet wide.

Extracted from the "London Daily Telegraph," May 19th, 1862.

"INTERNATIONAL EXHIBITION, CLASS 31.

"Of the most recent inventions it should be said that Messrs. JONES & ROWE'S Patent Worcestshire Range has attracted very special attention, and has been selected by the best authorities A valuable peculiarity of their Ranges is the placing of the OVEN and ROASTER one above the other instead of side by side, and the ROASTER is constantly replenished with fresh air."

INVENTORS AND MANUFACTURERS,

JONES & ROWE, WORCESTER,

AGENTS FOR LONDON: BARRON, SON, & WILSON, 418, STRAND, W.C.

Illustrated Catalogues, with Testimonials and Prices, forwarded on application.

BENJAMIN SLATER

[Late E. GOLLOP], SOLE PROPRIETOR.

A LARGE STOCK of the PATENT HINGES kept ready for delivery, consisting of Floor-springs, Gate-hinges, Rising-hinges, Rising Spring-hinges, Self-acting Spring-hinges, Double-acting Spring-hinges Rising and Sliding Door Back-springs, &c.

Price List and Drawings on application as above.

RICKET'S & HAMMOND'S

VENTILATING GLOBE LIGHT,

combining an agreeable method of lighting, with convenient, simple, and efficient ventilation.

The advantages obtained are these—

A TOTAL REMOVAL OF ALL PRODUCTS OF COMBUSTION.

A COMPLETE DISPLACEMENT OF HEATED AND VITIATED AIR.

AND A CONSIDERABLE ECONOMY IN THE CONSUMPTION OF GAS.

A GLOBE LIGHT will consume 5 to 7 feet of gas per hour, giving as much light as an ordinary three-light chandelier, with a consumption of 12 feet per hour.

No. 5, CHANDOS STREET, CHARING CROSS, LONDON, W.C.

IRON ROOFING of CORRUGATED IRON,

Wrought Iron, principal Roofs covered with Slates, Iron Bridges, Girders, and Railings; also Portable Buildings for Dwellings, Farm Purposes, Churches, Chapels, Schools, Theatres, Concert or Dancing Rooms, &c. suitable to all Climates, fixed complete in town or country, or packed for exportation.

OLD MANSION OF THE BOWYER FAMILY AT CAMBERWELL,

With a Woodcut of the Building, before the death and removal of the old Cedar Tree in the fore-garden, traditionally known as "Queen Elizabeth's Tree," will be found in a work entitled, "Collections illustrative of the History, &c. of Camberwell," &c.

The Carved Portion of the Work is most elaborate, and boldly carried out; and as an illustration of this, the subjoined Woodcuts of Doorhead and Mouldings will convey the best idea.

As many Gentlemen might require one or two rooms without being obliged to purchase the whole, the Proprietor will dispose of separate rooms should any offer be made to that effect, although as an entire collection it is much more valuable.

Various Portions are fixed up for View at the

PANTHEON, OXFORD STREET;

And can be seen on application to the Executors of

Mr. WILLIAM PIERCE, No. 5, JERMYN STREET, REGENT STREET.

VIEILLE MONTAGNE ZINC.

THE ITALIAN-FORMED ZINC is much approved of by Architects and Engineers on account of its strength, durability, and appearance. On account of the light framing required, roofs, including framework and fixing, can be covered with it FOR £3 PER SQUARE up to 25 feet span. Sheds of larger span, including posts, 4*l.* per square. Architects are cautioned against allowing anything thinner than No. 13 gauge (20 oz.) to be used. ALL PLATES SHOULD BE REJECTED NOT BEARING, in addition to the Company's name, the words "ROOFING ZINC," and the gauge.

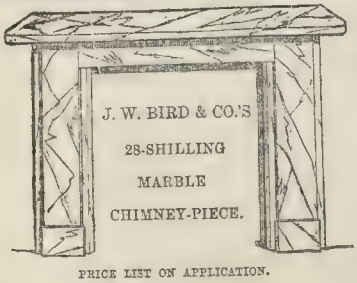
OLD ZINC RETAKEN AT HALF THE MARKET PRICE OF NEW.

For Designs and Estimates for Roofs, with Timber or Iron Framework, IRON CHURCHES COVERED WITH ZINC, and Buildings for the Colonies, apply to

THE COMPANY'S SURVEYOR,
12, MANCHESTER BUILDINGS, WESTMINSTER, S.W.

BATH STONE OF BEST QUALITY.

RANDELL & SAUNDERS, Quarrymen and Stone Merchants, Bath.



List of Prices at the Quarries and Depôts, also Cost for Transit to any part of the United Kingdom, furnished on application to BATH STONE OFFICE, CORSHAM, WILTS.

BATH STONE OF THE BEST QUALITY.

PICTOR & SONS, Quarry Proprietors and Stone Merchants, Bath.

Lists of Prices at the Quarries and Depôts, also Cost of Transit to all parts of the Kingdom, forwarded on application to BATH FREESTONE WORKS, BOX, NEAR CHIPPENHAM, WILTS.

MARBLE & STONE CHIMNEY-PIECES FOR THE MILLION

PRICE LIST ON APPLICATION.

A Stock of 500 *always to choose from at*

J. W. BIRD & CO.'S, THE EMPORIUM,

145 & 143½, EUSTON ROAD, N.W.

A Marble Box Chimney, with 8-inch piers, as Illustrated, for 28s. and fitted to any opening up to 3 feet square.

STONE DITTO, WITH BEAUTIFUL MOULDED CAPS, FOR SEVEN SHILLINGS.

Monuments and Tablets in great variety, equally low in price.
Masons' Work of all kinds contracted for and executed with dispatch, in Town or Country.
A VACANCY FOR AN OUT-DOOR APPRENTICE.

The Builder.

VOL. XXI.—No. 1083.

'Going Along." The Brenner Pass. Botzen to Verona.

So now we are off to cross the stony barrier that shuts in Italy. The rail no longer serves, or, as we ought rather to say, does not *yet* serve, for at this end of the mountain range, as well as more westerly, where the boring of Mont Cenis is going on steadily, the locomotive will before long find a road. However, this is not the case at present, so horses must do the work. The luggage is securely packed behind, a bag or two kept out for the night to be spent in the pass, Courier Guelder takes the box, and away we go. There is a good statue over some water in the road leaving Innsbruck, the more noticeable as most of the art seen in Tyrol is abominable. The interior of the churches is decorated in the most tawdry manner, and the coloured decorations externally of buildings on the road are sufficiently atrocious to keep the taste of the people where it now is, at zero. We take the Brenner pass, not because it is the most beautiful, or that is not the case, but for the sake of expedition. Nevertheless, it is much finer and more interesting than might be supposed from printed descriptions; and as to the condition of the road, the statement in guide-books that this is bad certainly does not apply now. The road is finely made, with built-up faces, where needed, to the ledge on which it runs, and good bridges over the streams. It is well kept, too, and protected with upright stones at the side. The landscape at first comprises fir-clad hills, and occasional towers of old castles, with wild bare crags behind, high up in the sky. The clouds are hanging about the summits, reposing as they pass: there is snow in the crevices, and to these features must be added, as the accidents of the day, a lovely blue sky and powerful sun. Here and there are seen small mineral workings, the mouth covered, and *débris* around. After reaching Brenner, about 5,000 feet above the sea, the road begins to descend. The village of Gossensass, close to the remains of a robber castle, called, with "skinflint" suggestiveness, *Easpen Stein*, has a glacier at the back, with

——"Its rugged breakers, which put on
The aspect of a tumbling tempest's foam,
Frozen in a moment."

Sterzing, a small town built by the miners, is a conglomeration of ugly houses, having a pathway beneath some of them, as in Chester. And after passing Sterzing, the Sterzinger flat brings us to *Mittewald*, literally the middle of the wood, and thirty miles from Innsbruck, where, in a large, rambling, old-fashioned inn, "The Post," affording much better accommodation than its aspect on first entering promises, the night is passed. The situation of the Inn is beautiful. The Eisack tumbles headlong past the house, over boulders, singing day and night in a voice almost too loud for light sleepers:—

"For man may come, and man may go,
But I flow on for ever, for ever."

The mountains are piled up around, and at the foot of some of them, on the other side of the stream, stands picturesquely the village church.

Six o'clock in the morning sees us again on the road,—and a charming road, for the most part, it is. Not far on comes into sight the fortress built by the Emperor of Austria, and called Franzensveste, commanding the several passes. It is an ugly heap and a disfigurement of nature: a little skill could have made it an adornment. At Brixen, the vines, heretofore like raspberry bushes, short and upright, are trained over trellis: and the buildings themselves begin to show a change. Very likely our reader recollects all this; still he will not object to be reminded of the pleasant feelings which on his first visit southward these indications raised. If it happened some years ago, he found changes, too, in the costume; but these now-a-days are scarcely to be observed. Railways have ironed down the differences: a flower or a feather in the hat of the Tyrolese is the chief now observable. All the dresses seen between Hyde Park and the Prater might have come from the Minories for anything their appearance said to the contrary.

While we have been gossiping we have reached a part of the road, just before arriving at Klausen, which is impassable. A storm a few nights before had brought down immense quantities of stone, no unusual occurrence in these districts, obstructing the road and desolating the fields and vineyards around. A gang of men, however, had been at work for some time, and soon a way was opened: not so soon will fertility be restored to the land on which the stones lie broad-cast.

Between Klausen and Azwang the porphyritic mountains are magnificent in colour and form: masses fall into the river at their feet, increasing the picturesqueness of the scene, and the Castle of Confidence (Trostburg), is one of several large buildings crowning the heights. The valley of the Adige soon opens upon us; the view is more beautiful than ever, and then the carriage rattles into Botzen, a part of Tyrol, but the door of Italy.

The bells were ringing when we went into Botzen: the bells were ringing when we went out of it, and they rang for the most part all the time we were there. Oh! those bells! The most ardent of campanologists, even our reverend friend of Clyst St. George, could say nothing for them. No one could sing there:—

——"Most musical and solemn, bringing back the olden times,
With their strange, unearthly changes, rang the melancholy chimes."

It was simply bang, bang, bang; clang, clang, clang; from earliest light to latest night; and during storms, when people are nervous and frightened, they continue on from night *to* light, to increase the nervousness and murder sleep. A Nuisances Removal Act for Botzen would be incomplete if it did not include the bells; and there are many other towns abroad to which such an Act should be made to apply. On the night we arrived a storm that had threatened all day burst in unmitigated fury over the Pass, through which we had travelled dry and safe. The effect was wonderfully fine,—at a distance.

The church has a stone spire of open work, and vari-coloured tiles on the roof. The porches are of Italian-Gothic,—the columns of one of them rest on sculptured lions. Within, the aisles which are wide, are of the same height as the nave. The body of the church belongs apparently to the fourteenth century. There is a curiously carved pulpit, with groups in the panels: and the stones of the church, both internally and externally, exhibit many masons' marks, some of them peculiar: of these, however, in another place.

The railway from Botzen (or as the Italians call it, Bolzano) to Verona runs in the valley of the Adige, the river accompanying it all the way. Soon we get the limestone mountains, on each side, somewhat close together, increasing strikingly the effect of their height. At Lavis station is seen a monstrously long bridge, where the rollicking Avisio runs into the now quieter Adige. Trent is the first great place reached, where long sat a notable council. The Cathedral, parts dating from the eleventh century, churches, campanili, houses, and mulberry-trees, form a good view, the latter reminding the traveller of the extent of the silk trade hereabout. The mountains have lost their trees, but are partly covered with low shrubs and grass. Farther on, Roveredo and one or two remarkable defiles through the rocks might be spoken of; but we have been dallying, delighted, so long in the country, noting a castle now and then, and an occasional waterfall laughing out of the hill-side; here arid rocks, and there wild flowers, not very different from those at home,—

"Stars of the ground, gay daughters of the air,
That God hath given to make our rude world fair;"

that we must put on the steam, and get at once to *Verona* and works of man.

The approach to this city now is remarkably striking, the exigencies of a fortified town forcing the railroad to wind round it to find a spot where the entrance of the passengers may be permitted. Its very ancient walls, its modern forts, the noble amphitheatre, the numerous churches, San Zenone foremost amongst them, come into sight, and promise, what all who have been there will admit to be the case, that Verona, in which Shakspeare has given English men and women a vested interest, is full of all sorts of interest, whether to the soldier, the politician, the philanthropist, the architect, the antiquary, the poet; in short,—the human being. Never mind if you do go by mistake to the "*Colombe d'Or*," and it turn out dirty, or are even attacked unawares by insidious, insinuating mosquitoes, and find your hands and face powdered with itching spots. These will soon be things to be laughed at; but the memories brought away from Verona will last for ever, haunting the mind and lending grace to the after life. It leaves painful memories too, but even these are wholesome and may stir to good. Here more forcibly, perhaps, than elsewhere does a foreigner get to understand what is meant by Italy under Austrian domination. Fortifications of all kinds abound: on every hill around are detached forts; there are forty-two of them, many quite new; the population is called 60,000, and the Austrian soldiers in the neighbourhood number 40,000! Oh! Italy, cradle of art and song, poor chastened one, thou art indeed—

"The land of beauty and of bondage too;
The land of untold glory and of shame;
The land whence poets inspiration drew,
And dower'd with all their never-dying fame.
The land of deathless memories which inflame
The living with the hope of nobler days,
When Liberty again his home shall claim,
And win once more earth's benison and praise,
Once more be crown'd with green as well as faded bays."

Soon may this good time come! But we are getting beyond our tether. Let us glance at something of what Verona has of the past. The Amphitheatre is kept in very good condition, and remains more complete internally than the Coliseum in Rome. It was probably built shortly before Trajan reigned; say, broadly, 100 years after the birth of Christ, and has a diameter of 511 feet one way and 404 feet the other. The Coliseum is 615 feet one way and 510 feet the other. The central arena at Verona is 262 feet by 146 feet. *Arena*, it will be remembered, means sand; so that we see how the name came. There are forty-five ranges of seats, *gradini*; seventy-two doors, two larger entrances, and sixty-four *vomitoria*. The *gradini* are in parts, 2 feet 3 inches wide and 1 foot 3 inches in height; higher up, 1 foot 4 inches in height. The openings below show immense stones piled one upon another. One lintel is 12 feet long, 2 feet 6 inches wide, and 2 feet in height. The seats and greater part of the structure are of marble; the arched passage-ways, of brick and rubble-work. Much of the masonry would seem to have been rusticated originally.

At a certain height up, one of the steps is narrower than the others. Mr. Woods, in his "Letters of an Architect," points to this, and

says, "as it could not be used as a seat, the back of the seat immediately below would become a means of communication; it is uncertain, however, whether this is anything more than a bungling restoration." And in "Murray," where this observation is quoted, a note is added, signed P. C. H.—initials we ought to know—saying, "There can be little doubt that this narrow step is an imperfect restoration, as it is carried only half way round the amphitheatre." In air that melted and under a sun that baked, we paced the round of the amphitheatre at this level, and can say that, however it may have been when these gentlemen wrote, the narrow step continues all round, and has all the aspect of intention.

In the arena some of the underground arrangements have been cleared out, consisting of an open conduit, so to to speak, 9 feet 6 inches wide, and at this time about 8 feet deep, leading to a large square reservoir occupying about the centre of the area. The top coping of the conduit on each side has square notches cut in it at short regular distances, perhaps to receive movable joists and flooring to cover it when not needed. The use made of these underground arrangements is not clearly understood. They were perhaps connected with water sports,—being a small *naumachia*, in short. Externally, the amphitheatre was in three well-proportioned stories of pilasters, and arches between them, but four compartments only of the outer enclosure remain three stories in height.

In 1822, when the Emperor and other illustrious persons were present, 60,000 persons, it is stated, were in the amphitheatre; but, in this case, they must have stood. The sitting room is for about 22,000. On the occasion of our visit the travelling performers of a circus occupied a small part of the arena, while 1,000 or 1,500 soldiers and country people looked on at an equestrian drama, with "Cobourg" combats to music from Astley's, a few fireworks closing the business. The "poor" performers and their audience filled but a small portion of the vast area. Seated far off and high up, under the broad blue canopy of heaven alive with stars, so far that while the movements below could be seen, no noise could be heard, the scene was strangely exciting. Hadrian had looked on here; perhaps Trajan before him: and the place was even more a ruin than it is now when San Micheli and Paul Veronese, both born in the town, ran as boys about its precincts.

The Porta dei Borsari, built not later than A.D. 265, in the time of the Emperor Gallienus (if Gallienus did not find it there, and incorporate it in his work), is a good piece of construction though a poor work of art. It is of that character which culminated at Spalatro. Talking of construction, some will recall the bridge of the Old Castle, over the Adige here, which has an arch about 130 feet in span, and nearly 40 feet in height! The parapet has the forked brick battlements which are common in Verona. This bridge is attributed (doubtfully perhaps), to the year 1358, when the castle was completed by one of the Scaligers. The arches, three in number, are not pointed.

We must pause, however, awhile; and before attacking a few of the forty churches, get some ice in the Piazza des Signori, where once those Scaligers lived, dominant in Verona. Here, seated amidst the old-world vestiges still presented, we may recall how,—

> "Two households, both alike in dignity,
> In fair Verona, where we lay our scene,
> From ancient grudge break to new mutiny,
> Where civil blood makes civil hands unclean;"

and see in five minutes, amongst other things, how adroitly Shakspeare, who had never visited the place, but had a "mind's eye," like Hamlet, hits one of its characteristics when he makes the nurse exclaim with emphasis, "Peter, my fan;" for in Verona, when the weather is hot, as it was on the day to which we are referring, man, woman, and child, use the fluttering appliance. Each would gladly say, "Peter, take my fan, and go before."

THE LATE MR. J. B. BUNNING, ARCHITECT.
